VITAL STATISTICS OF THE UNITED STATES, 1964

VOLUME I- NATALITY

A brief summary of the contents for each section is listed below for the convenience of the reader. A complete table of contents is shown at the beginning of each section and is identified by a narrow black edge which can be located easily by fanning the pages. Each section is paged independently, using the section number as the identifying prefix.

Section 1. Natality—Rates and Characteristics

Summary tables containing period and cohort measures of fertility and characteristics of live births including plurality, birth weight, period of gestation, attendant at birth, sex ratio, seasonal variation, and legitimacy.

Detailed frequency tabulations for each State, each metropolitan area, and other geographic areas of the United States. Data are shown by color and race, sex, nativity of mother, month, age of mother and of father, birth order, attendant, birth weight, period of gestation, plurality, and legitimacy.

Section 2. Natality—Local Area Statistics

Frequency tabulations for each State, county, and city with a population of 10,000 or more by color and attendant and for population-size groups in metropolitan and nonmetropolitan counties within each State by color, attendant, and birth weight.

Section 3. Natality—Puerto Rico and Virgin Islands (U.S.)

Trend of the crude birth rate. Frequency tabulations by color, sex, month, age of mother and of father, birth order, attendant, birth weight, period of gestation, and legitimacy.

Section 4. Technical Appendix

Text discussion of factors affecting the collection, classification, and interpretation of the natality statistics published in this volume. Includes population tables for computing vital rates.

Guide to tables in Section 1

(All data are for births occurring in the United States. Data for geographic areas within the United States are by place of residence unless otherwise noted)

GENERAL PATTERN OF VITAL REGISTRATION AND STATISTICS IN THE UNITED STATES

RESPONSIBLE PERSON OR AGENCY	BIRTH CERTIFICATE	DEATH CERTIFICATE	FETAL DEATH CERTIFICATE (Stillbirth)	REPORTING OFFICIALS	MARRIAGE RECORD	DIVORCE OR ANNULMENT RECORD
Physician, Other Professional Attendant, or Hospital Authority	1. Completes entire certificate in consultation with parent(s). Physician's signature required. 2. Files certificate with local office of district in which birth occurred.	1. Completes medical certification and signs certificate. 2. Returns certificate to funeral director.	1. Certifies to the cause of fetal death and signs certificate. 2. Returns certificate to funeral director.	Clerk of Local Government	1. Receives application for marriage license, and reviews application for completeness, accuracy, and compliance with law. 2. Issues marriage license, and records date. 3. Checks completeness of entries about the marriage ceremony. 4. Sends specified information regarding marriage to State Registrar.	
Funeral Director		1. Obtains personal facts about deceased. 2. Takes certificate to physician for medical certification. 3. Delivers completed certificate to local office of district where death occurred and obtains burial permit.	1. Obtains the facts about fetal death. 2. Takes certificate to physician for entry of causes of fetal death. 3. Delivers completed certificate to local office of district where delivery occurred and obtains burial permit.	Marriage Officiant	1. Checks the validity of the marriage license. 2. Performs the marriage ceremony. 3. Certifies to the facts of the marriage ceremony. 4. Returns the record to the license clerk within the legally prescribed time.	
Local Office (may be Local Registrar or City or County Health Department)	1. Verifies completeness and accuracy of certificate. 2. Makes copy, ledger entry, or index for local use. 3. Sends certificates to State Registrar.	1. Verifies completeness and accuracy of certificate. 2. Makes copy, ledger entry, or index for local use. 3. Issues burial permit to funeral director and verifies return of permit from cemetery attendant. 4. Sends certificates to State Registrar.		Clerk of Court		1. Provides form for report to plaintiff or attorney, or makes entries on such form from petition for decree. 2. Verifies entries on return form. 3. Enters information on final decree. 4. Sends completed report to State Registrar.
City and county health departments use certificates in allocating medical and nursing services, followups on infectious diseases, planning programs, measuring effectiveness of services, and conducting research studies.				Attorney for Plaintiff		1. Enters personal characteristics of spouses. 2. Returns form to Clerk of Court.
State Registrar, Bureau of Vital Statistics*	1. Queries incomplete or inconsistent information. 2. Maintains files for permanent reference and as the source of certified copies. 3. Develops vital statistics for use in planning, evaluating, and administering State and local health activities and for research studies. 4. Compiles health related statistics for State and civil divisions of State for use of the health department and other agencies and groups interested in the fields of medical science, public health, demography, and social welfare. 5. Prepares copies of birth, death, fetal death, marriage, and divorce certificates or records for transmission to the National Center for Health Statistics.					
Public Health Service National Center for Health Statistics	1. Prepares and publishes national statistics of births, deaths, fetal deaths, marriages, and divorces; and constructs the official U.S. life tables and related actuarial tables. 2. Conducts health and social-research studies based on vital records and on sampling surveys linked to records. 3. Conducts research and methodological studies in vital statistics methods including the technical, administrative, and legal aspects of vital records registration and administration. 4. Maintains a continuing technical assistance program to improve the quality and usefulness of vital statistics.					

NOTE.—In some States there is no central file for marriage and divorce records at the State level.

*In 49 States and the District of Columbia the Bureau is in the State Health Department. In Massachusetts the Bureau is in the Office of the Secretary of State.

Section 1. Natality -Rates and Characteristics

Table		Page
1-1.	Live births and birth rates, by color: Birth-registration States, 1915-32, and United States, 1933-64	1-3
1-2.	Live births, birth rates, and fertility rates, by color: United States, 1909-64	1-4
1-3.	Age-sex-adjusted birth rates, by color: United States, 1940-64	1-5
1-4.	Gross and net reproduction rates, by color: United States, 1940-64	1-5
1-5.	Intrinsic rates of birth, death, and natural increase, by color: United States, 1940-64	1-6
1-6.	Total fertility rates and birth rates, by age of mother and color: United States, 1940-64	1-7
1-7.	Estimated birth rates, by age of mother, for married women: United States, 1950-64	1-8
1-8.	Birth rates, by age of father and color: United States, 1940, 1950, and 1959-64	1-9
1-9.	Birth rates, by live-birth order and color: United States, 1940-64	1-10
1-10.	Birth rates, by live-birth order, for native white women: United States, 1920-64	1-11
1-11.	Birth rates, by age of mother, live-birth order, and color: United States, 1964	1-12
1-12.	Percentage distribution of live births by live-birth order, by age of mother and color: United States, 1964	1-12
1-13.	Median age of mother, by live-birth order and color: United States, 1940, 1950, and 1960-64	1-13
1-14.	Percentage distribution of women by parity, by exact age, in selected groups of cohorts from 1876-80 to 1946-50: United States, 1920-65	1-14
1-15.	Birth probabilities for women, by parity, by exact age: United States, 1940, 1950, and 1956-64	1-15
1-16.	Central birth rates, by live-birth order and current age of mother, for women in groups of cohorts from 1914-18 to 1945-49: United States, 1958-64	1-16
1-17.	Cumulative birth rates, by live-birth order and exact age of mother, for women in groups of cohorts from 1905-09 to 1946-50: United States, 1959-65	1-17
1-18.	Central birth rates, by live-birth order and current age of mother, for women in each cohort from 1909 to 1950: United States, 1958-64	1-18
1-19.	Cumulative birth rates, by live-birth order and exact age of mother, for women in each cohort from 1909 to 1950: United States, 1959-65	1-22
1-20.	Live births by sex and sex ratio at birth, by color: United States, 1940-64	1-26
1-21.	Percent completeness of birth registration, by color: United States, 1933-64	1-26
1-22.	Live births and birth rates, by month: United States, 1955-64	1-27
1-23.	Birth rates and fertility rates, by month, adjusted for seasonal variation: United States, 1955-64	1-27
1-24.	Number and percentage distribution of live births by attendant, by color: United States, 1940-64	1-28
1-25.	Percentage distribution of live births by attendant, by color: United States, each division and State, 1964	1-29
1-26.	Estimated number of illegitimate live births and ratios, by color, and illegitimacy rates: United States, 1940-64	1-30

Table		Page
1-27.	Estimated illegitimacy rates, by age of mother: United States, 1940, 1950, and 1960-64	1-30
1-28.	Estimated number of illegitimate live births and ratios, by age of mother and color: United States, 1964	1-31
1-29.	Ratio of illegitimate live births to total live births, by color: 35 reporting States, 1961-64	1-31
1-30.	Percentage distribution of live births by birth weight, by age of mother and color: United States, 1964	1-32
1-31.	Percentage distribution of live births by birth weight, by color, for the United States and each geographic division; and by plurality for the United States: 1964	1-33
1-32.	Percentage distribution of live births by birth weight, by period of gestation and color: United States, 1964	1-34
1-33.	Birth rates: United States, each division and State, 1950 and 1958-64	1-35
1-34.	Live births by State of occurrence distributed according to State of residence: United States and each State, 1964	1-36
1-35.	Live births by month and State of occurrence: United States and each State, 1964	1-39
1-36.	Live births by month and color for the United States and each State; and by sex for the United States: 1964	1-40
1-37.	Live births by specified race and sex: United States and each State, 1964	1-42
1-38.	Live births by plurality of birth and color: United States and each State, 1964	1-43
1-39.	Live births by birth weight, plurality of birth, color, and sex: United States, 1964	1-44
1-40.	Live births by birth weight, age of mother, plurality of birth, and color: United States, 1964	1-45
1-41.	Live births by birth weight and color: United States and each State, 1964	1-47
1-42.	Live births by birth weight, period of gestation, and color, for metropolitan and nonmetropolitan counties: United States, 1964	1-50
1-43.	Live births by birth weight, period of gestation, and color: Total of four selected registration areas, 1964	1-52
1-44.	Live births by period of gestation, plurality of birth, and color, by sex of child and by age of mother: United States, 1964	1-53
1-45.	Live births by period of gestation, plurality of birth, and color, by sex of child and by age of mother: Total of four selected registration areas, 1964	1-55
1-46.	Live births by period of gestation and color: United States and each State, 1964	1-57
1-47.	Live births by month, age of mother, live-birth order, and color: United States, 1964	1-60
1-48.	Live births by age of mother, live-birth order, sex of child, race, and nativity of white mother: United States, 1964	1-62
1-49.	Live births by age of mother, live-birth order, and race: Each State, 1964	1-64
1-50.	Live births by single year of age of mother, live-birth order, race and nativity of white mother: United States, 1964	1-87
1-51.	Live births by age of mother and race, for metropolitan and nonmetropolitan counties: United States and each State, 1964	1-90
1-52.	Live births by age of mother and race, for standard metropolitan statistical areas of the United States: 1964	1-98
1-53.	Live births by live-birth order and race, for metropolitan and nonmetropolitan counties: United States and each State, 1964	1-109
1-54.	Live births by live-birth order and race, for standard metropolitan statistical areas of the United States: 1964	1-116
1-55.	Live births by age of father, age of mother, sex of child, and color: United States, 1964	1-127
1-56.	Illegitimate live births by age of mother and color, for population-size groups and specified urban places of 50,000 or more: 35 reporting States, 1964	1-128
1-57.	Illegitimate live births by age of mother, live-birth order, and color, for metropolitan and nonmetropolitan counties: Total of 35 reporting States, 1964	1-138

Table 1-1. Live Births and Birth Rates, by Color: Birth-Registration States, 1915-32, and United States, 1933-64

(Refers only to births occurring within the specified area. Rates per 1,000 population residing in area for specified group except as noted. Rates for 1940, 1950, and 1960 based on population enumerated as of April 1; for all other years, estimated as of July 1)

AREA AND YEAR	NUMBER			RATE[1]		
	Total	White	Nonwhite	Total	White	Nonwhite
UNITED STATES[2]						
1964[3]	4,027,490	3,369,160	658,330	21.0	20.0	29.2

[1]For 1941-46, based on population including Armed Forces abroad.
[2]Alaska included beginning 1959, and Hawaii, 1960.
[3]Based on a 50-percent sample of births.
[4]Figures by color exclude data for residents of New Jersey; see Technical Appendix.
[5]Increased in number from 10 States and the District of Columbia in 1915 to the entire conterminous United States in 1933.

Heavy Rule

Table 1-2. Live Births, Birth Rates, and Fertility Rates, by Color: United States, 1909-64

(Refers only to births occurring within the United States. Alaska included beginning 1959, and Hawaii, 1960. Birth rates per 1,000 population residing in area for specified group. Fertility rates per 1,000 women aged 15-44 years in specified group. Rates for 1940, 1950, and 1960 based on population enumerated as of April 1; for all other years, estimated as of July 1)

[1]For 1917-19 and 1941-46, based on population including Armed Forces abroad.
[2]Based on a 50-percent sample of births.
[3]Figures by color exclude data for residents of New Jersey; see Technical Appendix.
[4]Due to rounding to the nearest thousand, figures by color may not add to totals. For 1915-32, figures include adjustments for States not in the registration area; for years prior to 1915, figures are estimates based on the number of registered births in the 10 original registration States for the same period. Estimates for 1909-34 were prepared by P. K. Whelpton. See National Office of Vital Statistics, "Births and Birth Rates in the Entire United States, 1909 to 1948," Vital Statistics--Special Reports, Vol. 33, No. 8, 1950.

Table 1-3. Age-Sex-Adjusted Birth Rates, by Color: United States, 1940-64

(Alaska included beginning 1959, and Hawaii, 1960. Rates per 1,000 population. Computed by the direct method, using as the standard population the age distribution of women aged 10-49 years as enumerated in 1940 and the total enumerated population of the United States for that year. Based on birth rates by age of mother and color shown in table 1-6)

YEAR	Total	White	Nonwhite
REGISTERED BIRTHS			
1964[1]	27.3	26.2	35.5
1963[1] [2]	28.4	27.3	36.5

1941	20.3	19.7	25.3
1940	19.4	18.8	24.5

[1]Based on a 50-percent sample of births.
[2]Figures by color exclude data for residents of New Jersey; see Technical Appendix.

Table 1-4. Gross and Net Reproduction Rates, by Color: United States, 1940-64

(Refers only to births occurring within the United States. Alaska included beginning 1959, and Hawaii, 1960. Gross reproduction rates are the sums of birth rates by 5-year age groups of mothers multiplied by 5 and by the proportion of births that were female. Net reproduction rates are the sums of birth rates by 5-year age groups of mothers multiplied by 5 and by the probability, as determined from the life table for the year, of women surviving to a specified age group and by the proportion of births that were female)

Table 1-5. Intrinsic Rates of Birth, Death, and Natural Increase, by Color: United States, 1940-64

(Refers only to events occurring within the United States. Alaska included beginning 1959, and Hawaii, 1960. Rates per 1,000 women. Intrinsic rates of birth, death, and natural increase are the rates that would eventually prevail if a population were to experience the age-specific mortality and fertility rates for a given year over a long period of time. For method of computation, see page 4-13, Volume I, Vital Statistics of the United States, 1962)

[1]Rates computed by relating total legitimate births, regardless of age of mother, to married women aged 15-44 years.
[2]Based on a 50-percent sample of births.

Table 1-8. Birth Rates, by Age of Father and Color: United States, 1940, 1950, and 1959-64

(Refers only to births occurring within the United States. Alaska included beginning 1959, and Hawaii, 1960. Rates are live births per 1,000 men residing in area for specified group, enumerated as of April 1 for 1940, 1950, and 1960 and estimated as of July 1 for all other years. Figures for age of father not stated are distributed)

[1]Based on a 50-percent sample of births.
[2]Figures exclude data for residents of New Jersey; see Technical Appendix.

Table 1-14. Percentage Distribution of Women by Parity, by Exact Age, in Selected Groups of Cohorts From 1876-80 to 1946-50: United States, 1920-65

(Alaska included beginning 1959, and Hawaii, 1960. Parity refers to the number of children borne alive by a woman as of a particular time. Based on cumulative rates shown in table 1-17 of this report and in table 2 of "Fertility Tables for Birth Cohorts of American Women, Part 1," by P.K. Whelpton and A. A. Campbell, National Office of Vital Statistics, Vital Statistics—Special Reports, Vol. 51, No. 1, 1960. For method of computation, see Technical Appendix)

EXACT AGE OF WOMAN AND COHORT	As of January 1	Total	PARITY

Table 1-15. Birth Probabilities for Women, by Parity, by Exact Age: United States, 1940, 1950, and 1956-64

(Alaska included beginning 1959, and Hawaii, 1960. Based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. Parity refers to the number of children borne alive by a woman. Probabilities are the number of births per 1,000 women in specified parity and exact age group. Figures in the "0 parity" column show the probability of first births to "0 parity" women, those in the "1 parity" column show the probability of second births to "1 parity" women, etc.)

EXACT AGE OF MOTHER AS OF JANUARY 1	PARITY

Table 1-16. Central Birth Rates, by Live-Birth Order and Current Age of Mother, for Women in Groups of Cohorts From 1914-18 to 1945-49: United States, 1958-64

(Alaska included beginning 1959, and Hawaii, 1960. Live-birth order refers to number of children born alive to mother. Rates are averages of the rates per 1,000 women for single cohorts shown in table 1-18; these rates are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. Comparable data for 1917-57 are shown in table 1 of the report cited in the headnote to table 1-14)

Table 1-18. Central Birth Rates, by Live-Birth Order and Current Age of Mother, for Women in Each Cohort From 1909 to 1950: United States, 1958-64

(Alaska included beginning 1959, and Hawaii, 1960. Live-birth order refers to the number of children born alive to mother. Rates are per 1,000 women and are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. Comparable data for 1917-57 are shown in table 3 of the report cited in the headnote to table 1-14; the method of computation is also shown in the report)

COHORT AND CURRENT AGE OF WOMAN	Calendar year	Total	LIVE-BIRTH ORDER

Table 1-19. Cumulative Birth Rates, by Live-Birth Order and Exact Age of Mother, for Women in Each Cohort From 1909 to 1950: United States, 1959-65

(Alaska included beginning 1959, and Hawaii, 1960. Live-birth order refers to number of children born alive to mother. Rates are per 1,000 women and are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. Comparable data for 1917-58 are shown in table 4 of the report cited in the headnote to table 1-14; the method of computation is also shown in the report)

COHORT AND EXACT AGE OF WOMAN	As of January 1	Total	LIVE-BIRTH ORDER

Table 1-23. Birth Rates and Fertility Rates, by Month, Adjusted for Seasonal Variation: United States, 1955-64

(Refers only to births occurring within the United States. Alaska included beginning 1959, and Hawaii, 1960. Based on a 50-percent sample of births for all years except 1955. Monthly birth and fertility rates adjusted for seasonal variation are those that would have been observed if the characteristic seasonal pattern of births prevailing over the preceding 10 years were eliminated. Rates on an annual basis per 1,000 estimated population residing in area for specified month. Birth rates based on total population; fertility rates based on women aged 15-44 years)

1940	89,500	40,300	49,200	37.9	19.5	168.3	7.1

[1]Per 1,000 total live births in specified group.
[2]Per 1,000 unmarried women aged 15-44 years, enumerated as of April 1 for 1940, 1950, and 1960 and estimated as of July 1 for all other years.
[3]Based on a 50-percent sample of births.
[4]Figures by color exclude data for residents of New Jersey; see Technical Appendix.

Table 1-27. Estimated Illegitimacy Rates, by Age of Mother: United States, 1940, 1950, and 1960-64

(Refers only to births occurring within the United States. Alaska included beginning 1959, and Hawaii, 1960. Rates are illegitimate live births per 1,000 unmarried women in specified group, enumerated as of April 1 for 1940, 1950, and 1960 and estimated as of July 1 for all other years. Figures for age of mother not stated are distributed)

YEAR	15-44 years[1]	AGE OF MOTHER						
		10-14 years	15-19 years	20-24 years	25-29 years	30-34 years	35-39 years	40-44 years[2]
1964[3]	23.4	0.6	16.5	40.0	50.1	41.1	15.0	4.0
1963[3]	22.5	0.6	15.3	39.9	49.4	33.7	16.1	4.3
1962[3]	21.5	0.6	14.9	41.8	46.4	27.0	13.5	3.4
1961[3]	22.6	0.6	16.0	41.2	44.8	28.9	15.1	3.8
1960[3]	21.8	0.6	15.7	40.3	42.0	27.5	13.9	3.6
1950	14.1	0.6	12.6	21.3	19.9	13.3	7.2	2.0
1940	7.1	0.4	7.4	9.5	7.2	5.1	3.4	1.2

[1]Rates computed by relating total illegitimate births, regardless of age of mother, to unmarried women aged 15-44 years.
[2]Rates computed by relating illegitimate births to mothers aged 40 years and over to unmarried women aged 40-44 years.
[3]Based on a 50-percent sample of births.

Table 1-28. Estimated Number of Illegitimate Live Births and Ratios, by Age of Mother and Color: United States, 1964

(Refers only to births occurring within the United States. Based on a 50-percent sample. Due to rounding estimates to the nearest hundred, figures by color may not add to totals. Ratios per 1,000 total live births in specified group)

AGE OF MOTHER	NUMBER			RATIO		
	Total	White	Nonwhite	Total	White	Nonwhite
TOTAL	275,700	114,300	161,300	68.5	33.9	245.0
Under 15 years	5,800	1,400	4,400	742.1	523.2	856.0

Table 1-29. Ratio of Illegitimate Live Births to Total Live Births, by Color: 35 Reporting States, 1961-64

(By place of residence. Based on a 50-percent sample. Refers only to illegitimate births occurring within the reporting area to residents of area. Ratios per 1,000 total live births in specified group. Asterisk indicates ratio based on frequency of less than 20).

AREA	1964			1963			1962			1961

[1]Totals by color for 1962 and 1963 exclude data for residents of New Jersey; see Technical Appendix.
[2]Figures for 1963 and 1964 include an unknown number of illegitimate births erroneously allocated to this area because of incomplete residence reporting.
[3]Figures for 1963 and 1964 exclude an unknown number of illegitimate births because of erroneous filing of a substitute record which did not include the item on legitimacy status.
[4]Figures for 1961 exclude a significant but unknown number of illegitimate births erroneously classified as legitimate.

Table 1-30. Percentage Distribution of Live Births by Birth Weight, by Age of Mother and Color: United States, 1964

(Refers only to births occurring within the United States. Based on a 50-percent sample. Figures for both age of mother and birth weight not stated are distributed)

[1]Period of gestation reported in months allocated to gestation intervals in weeks as follows: 4 months to "Under 20 weeks"; 5 and 6 months to "20-27 weeks"; 7 months to "28-31 weeks"; 8 months to 32-35 weeks"; 9 months to "40 weeks"; 10 months to "43 weeks and over."

[2]Computed to nearest 10 grams on basis of exact conversion of interval limits from pounds and ounces.

[3]Equivalents of the gram weights in terms of pounds and ounces are as follows:

500 grams or less = 1 lb. 1 oz. or less
501-1,000 grams = 1 lb. 2 oz. - 2 lb. 3 oz.
1,001-1,500 grams = 2 lb. 4 oz. - 3 lb. 4 oz.
1,501-2,000 grams = 3 lb. 5 oz. - 4 lb. 6 oz.
2,001-2,500 grams = 4 lb. 7 oz. - 5 lb. 8 oz.
2,501-3,000 grams = 5 lb. 9 oz. - 6 lb. 9 oz.
3,001-3,500 grams = 6 lb. 10 oz. - 7 lb. 11 oz.
3,501-4,000 grams = 7 lb. 12 oz. - 8 lb. 13 oz.
4,001-4,500 grams = 8 lb. 14 oz. - 9 lb. 14 oz.
4,501-5,000 grams = 9 lb. 15 oz. - 11 lb. 0 oz.
5,001 grams or more = 11 lb. 1 oz. or more

Table 1-33. Birth Rates: United States, Each Division and State, 1950, and 1958-64

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample for all years except 1950. Rates are live births per 1,000 population in each area, enumerated as of April 1 for 1950 and 1960 and estimated as of July 1 for all other years)

DIVISION AND STATE	RATES BASED ON REGISTERED BIRTHS						RATES BASED ON BIRTHS ADJUSTED FOR UNDERREGISTRATION

[1]Equivalents of the gram weights in terms of pounds and ounces are as follows:

500 grams or less = 1 lb. 1 oz. or less
501-1,000 grams = 1 lb. 2 oz. - 2 lb. 3 oz.
1,001-1,500 grams = 2 lb. 4 oz. - 3 lb. 4 oz.
1,501-2,000 grams = 3 lb. 5 oz. - 4 lb. 6 oz.
2,001-2,500 grams = 4 lb. 7 oz. - 5 lb. 8 oz.
2,501-3,000 grams = 5 lb. 9 oz. - 6 lb. 9 oz.
3,001-3,500 grams = 6 lb. 10 oz. - 7 lb. 11 oz.
3,501-4,000 grams = 7 lb. 12 oz. - 8 lb. 13 oz.
4,001-4,500 grams = 8 lb. 14 oz. - 9 lb. 14 oz.
4,501-5,000 grams = 9 lb. 15 oz. - 11 lb. 0 oz.
5,001 grams or more = 11 lb. 1 oz. or more

Table 1-40. Live Births by Birth Weight, Age of Mother, Plurality of Birth, and Color: United States, 1964

(Refers only to births occurring within the United States. Based on a 50-percent sample. Figures for age of mother not stated are distributed)

AGE OF MOTHER, PLURALITY OF BIRTH, AND COLOR	Total	BIRTH WEIGHT[1]

[1]Equivalents of the gram weights in terms of pounds and ounces are as follows:

500 grams or less = 1 lb. 1 oz. or less
501-1,000 grams = 1 lb. 2 oz. - 2 lb. 3 oz.
1,001-1,500 grams = 2 lb. 4 oz. - 3 lb. 4 oz.
1,501-2,000 grams = 3 lb. 5 oz. - 4 lb. 6 oz.
2,001-2,500 grams = 4 lb. 7 oz. - 5 lb. 8 oz.
2,501-3,000 grams = 5 lb. 9 oz. - 6 lb. 9 oz.
3,001-3,500 grams = 6 lb. 10 oz. - 7 lb. 11 oz.
3,501-4,000 grams = 7 lb. 12 oz. - 8 lb. 13 oz.
4,001-4,500 grams = 8 lb. 14 oz. - 9 lb. 14 oz.
4,501-5,000 grams = 9 lb. 15 oz. - 11 lb. 0 oz.
5,001 grams or more = 11 lb. 1 oz. or more

Table 1-41. Live Births by Birth Weight and Color: United States and Each State, 1964

[1]Equivalents of the gram weights in terms of pounds and ounces are as follows:

500 grams or less = 1 lb. 1 oz. or less
501-1,000 grams = 1 lb. 2 oz. - 2 lb. 3 oz.
1,001-1,500 grams = 2 lb. 4 oz. - 3 lb. 4 oz.
1,501-2,000 grams = 3 lb. 5 oz. - 4 lb. 6 oz.
2,001-2,500 grams = 4 lb. 7 oz. - 5 lb. 8 oz.
2,501-3,000 grams = 5 lb. 9 oz. - 6 lb. 9 oz.
3,001-3,500 grams = 6 lb. 10 oz. - 7 lb. 11 oz.
3,501-4,000 grams = 7 lb. 12 oz. - 8 lb. 13 oz.
4,001-4,500 grams = 8 lb. 14 oz. - 9 lb. 14 oz.
4,501-5,000 grams = 9 lb. 15 oz. - 11 lb. 0 oz.
5,001 grams or more = 11 lb. 1 oz. or more

[2]Figures exclude approximately 1,800 live births recorded in this State; see Technical Appendix.

Table 1-42. Live Births by Birth Weight, Period of Gestation, and Color, for Metropolitan and Nonmetropolitan Counties: United States, 1964

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. Maryland, except Baltimore, and Massachusetts did not require reporting of period of gestation; figures for this item are included in "Not stated." For definition of areas, see Technical Appendix)

AREA, PERIOD OF GESTATION,[1] AND COLOR	Total	BIRTH WEIGHT[2]

Table 1-42. Live Births by Birth Weight, Period of Gestation, and Color, for Metropolitan and Nonmetropolitan Counties: United States, 1964 – Con.

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. Maryland, except Baltimore, and Massachusetts did not require reporting of period of gestation; figures for this item are included in "Not stated." For definition of areas, see Technical Appendix)

AREA, PERIOD OF GESTATION,[1] AND COLOR	Total	BIRTH WEIGHT[2]

[1]Period of gestation reported in months allocated to gestation intervals as follows: 4 months to "Under 20 weeks"; 5 and 6 months to "20-27 weeks"; 7 months to "28-31 weeks"; 8 months to "32-35 weeks"; 9 months to "40 weeks"; 10 months to "43 weeks and over."

[2]Equivalents of the gram weights in terms of pounds and ounces are as follows:

500 grams or less = 1 lb. 1 oz. or less
501-1,000 grams = 1 lb. 2 oz. - 2 lb. 3 oz.
1,001-1,500 grams = 2 lb. 4 oz. - 3 lb. 4 oz.
1,501-2,000 grams = 3 lb. 5 oz. - 4 lb. 6 oz.
2,001-2,500 grams = 4 lb. 7 oz. - 5 lb. 8 oz.
2,501-3,000 grams = 5 lb. 9 oz. - 6 lb. 9 oz.
3,001-3,500 grams = 6 lb. 10 oz. - 7 lb. 11 oz.
3,501-4,000 grams = 7 lb. 12 oz. - 8 lb. 13 oz.
4,001-4,500 grams = 8 lb. 14 oz. - 9 lb. 14 oz.
4,501-5,000 grams = 9 lb. 15 oz. - 11 lb. 0 oz.
5,001 grams or more = 11 lb. 1 oz. or more

Table 1-43. Live Births by Birth Weight, Period of Gestation, and Color: Total of Four Selected Registration Areas, 1964

(Based on a 50-percent sample. Refers only to births occurring within the selected registration areas—Baltimore, California, District of Columbia, and New York City. Figures by period of gestation for these areas are based on an item on the birth record, first day of last normal menstrual period (LMP); see Technical Appendix)

PERIOD OF GESTATION[1] AND COLOR	Total	BIRTH WEIGHT[2]

[1]Period of gestation reported in months allocated to gestation intervals in weeks as follows: 4 months to "Under 20 weeks"; 5 and 6 months to "20-27 weeks"; 7 months to "28-31 weeks"; 8 months to "32-35 weeks"; 9 months to "40 weeks"; 10 months to "43 weeks and over."

[2]Equivalents of the gram weights in terms of pounds and ounces are as follows:

500 grams or less = 1 lb. 1 oz. or less
501-1,000 grams = 1 lb. 2 oz. - 2 lb. 3 oz.
1,001-1,500 grams = 2 lb. 4 oz. - 3 lb. 4 oz.
1,501-2,000 grams = 3 lb. 5 oz. - 4 lb. 6 oz.
2,001-2,500 grams = 4 lb. 7 oz. - 5 lb. 8 oz.
2,501-3,000 grams = 5 lb. 9 oz. - 6 lb. 9 oz.
3,001-3,500 grams = 6 lb. 10 oz. - 7 lb. 11 oz.
3,501-4,000 grams = 7 lb. 12 oz. - 8 lb. 13 oz.
4,001-4,500 grams = 8 lb. 14 oz. - 9 lb. 14 oz.
4,501-5,000 grams = 9 lb. 15 oz. - 11 lb. 0 oz.
5,001 grams or more = 11 lb. 1 oz. or more

Table 1-44. Live Births by Period of Gestation, Plurality of Birth, and Color, by Sex of Child and by Age of Mother: United States, 1964

(Refers only to births occurring within the United States. Based on a 50-percent sample. Maryland, except Baltimore, and Massachusetts did not require reporting of period of gestation; figures for this item are included in "Not stated." Figures for age of mother not stated are distributed)

[1]Period of gestation reported in months allocated to gestation intervals in weeks as follows: 4 months to "Under 20 weeks"; 5 and 6 months to "20-27 weeks"; 7 months to "28-31 weeks"; 8 months to "32-35 weeks"; 9 months to "40 weeks"; 10 months to "43 weeks and over."

Table 1-45. Live Births by Period of Gestation, Plurality of Birth, and Color, by Sex of Child and by Age of Mother: Total of Four Selected Registration Areas, 1964

(Based on a 50-percent sample. Refers only to births occurring within the selected registration areas—Baltimore, California, District of Columbia, and New York City. Figures by period of gestation for these areas are based on an item on the birth record, first day of last normal menstrual period (LMP); see Technical Appendix. Figures for age of mother not stated are distributed)

[1]Period of gestation reported in months allocated to gestation intervals in weeks as follows: 4 months to "Under 20 weeks"; 5 and 6 months to "20-27 weeks"; 7 months to "28-31 weeks"; 8 months to "32-35 weeks"; 9 months to "40 weeks"; 10 months to "43 weeks and over."
[2]Figures by period of gestation are for births occurring in Baltimore to residents of Maryland and for births occurring in other States to residents of the State.
[3]Figures by period of gestation are for births occurring in other States to residents of Massachusetts.
[4]Figures exclude approximately 1,800 live births recorded in this State; see Technical Appendix.

Table 1-47. Live Births by Month, Age of Mother, Live-Birth Order, and Color: United States, 1964

(Refers only to births occurring within the United States. Based on a 50-percent sample. Live-birth order refers to number of children born alive to mother. Figures for age of mother not stated are distributed)

Table 1-49. Live Births by Age of Mother, Live-Birth Order, and Race: Each State, 1964

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. Live-birth order refers to number of children born alive to mother. Figures for age of mother not stated are distributed)

AREA, AGE OF MOTHER, AND RACE	Total	LIVE-BIRTH ORDER

[1]Figures exclude approximately 1,800 live births recorded in this State; see Technical Appendix.

Table 1-49. Live Births by Age of Mother, Live-Birth Order, and Race: Each State, 1964—Con.

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. Live-birth order refers to number of children born alive to mother. Figures for age of mother not stated are distributed)

Table 1-50. Live Births by Single Year of Age of Mother, Live-Birth Order, Race, and Nativity of White Mother: United States, 1964 – Con.

(Refers only to births occurring within the United States. Based on a 50-percent sample. Live-birth order refers to number of children born alive to mother. Figures for age of mother not stated and nativity of white mother not stated are distributed)

AGE OF MOTHER, RACE, AND NATIVITY OF WHITE MOTHER	Total	LIVE-BIRTH ORDER								
		1	2	3	4	5	6	7	8 and over	Not stated
WHITE—Con.										
Native white—Con.

Table 1-50. Live Births by Single Year of Age of Mother, Live-Birth Order, Race, and Nativity of White Mother: United States, 1964 – Con.

(Refers only to births occurring within the United States. Based on a 50-percent sample. Live-birth order refers to number of children born alive to mother. Figures for age of mother not stated and nativity of white mother not stated are distributed)

AGE OF MOTHER, RACE, AND NATIVITY OF WHITE MOTHER	Total	LIVE-BIRTH ORDER

Table 1-52. Live Births by Age of Mother and Race, for Standard Metropolitan Statistical Areas of the United States: 1964

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. Areas shown are those listed in Standard Metropolitan Statistical Areas issued in 1961 by the Bureau of the Budget, except for those in New England, where areas are metropolitan State economic areas established by the Bureau of the Census in 1960. For definition of areas, see Technical Appendix. Figures for age of mother not stated are distributed)

[1]Figures exlude some births recorded in Massachusetts; see Technical Appendix.
[2]Comprised of four standard metropolitan statistical areas—New York, N.Y., Newark, N.J., Jersey City, N.J., and Paterson-Clifton-Passaic, N.J.—and two nonmetropolitan counties—Middlesex and Somerset Counties, N.J.
[3]Comprised of two standard metropolitan statistical areas—Chicago, Ill., and Gary-Hammond-East Chicago, Ind.

Table 1-53. Live Births by Live-Birth Order and Race, for Metropolitan and Nonmetropolitan Counties: United States and Each State, 1964

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. Live-birth order refers to number of children born alive to mother. For definition of areas, see Technical Appendix)

Table 1-53. Live Births by Live-Birth Order and Race, for Metropolitan and Nonmetropolitan Counties: United States and Each State, 1964–Con.

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. Live-birth order refers to number of children born alive to mother. For definition of areas, see Technical Appendix)

Table 1-54. Live Births by Live-Birth Order and Race, for Standard Metropolitan Statistical Areas of the United States: 1964

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. Live-birth order refers to number of children born alive to mother. Areas shown are those listed in Standard Metropolitan Statistical Areas issued in 1961 by the Bureau of the Budget, except for those in New England, where areas are metropolitan State economic areas as established by the Bureau of the Census in 1960. For definition of areas, see Technical Appendix)

Table 1-56. Illegitimate Live Births by Age of Mother and Color, for Population-Size Groups and Specified Urban Places of 50,000 or More: 35 Reporting States, 1964

(By place of residence. Refers only to illegitimate births occurring within the reporting area to residents of area. Based on a 50-percent sample. Urban places are those with populations of 10,000 or more in 1960. Specified urban places are those with populations of 50,000 or more in 1960 and are incorporated unless otherwise noted. Figures for white and nonwhite are shown separately where the 1960 population for nonwhite formed 10 percent of the total population of the area or numbered 10,000 or more. Figures for age of mother not stated are distributed)

#Classified as urban under special rule; see Technical Appendix.
[1]Includes births attended by physicians, midwives, or other persons in hospitals or institutions and births attended by physicians in clinics; see Technical Appendix.
[2]"Districts" shown are election districts, the nearest equivalent of counties.
[3]Includes District 1, Prince of Wales.
[4]Includes data for Texarkana, Ark., only.
[5]The cities of Honolulu and Hilo have legally established limits and, therefore, are treated as incorporated places.
[6]Geographically located within limits of Idaho, Montana, and Wyoming.
[7]Figures exclude approximately 1,800 live births recorded in this State; see Technical Appendix.
[8]Includes data for Bristol, Tenn., only.
[9]Includes data for Texarkana, Tex., only.
[10]Independent cities having populations of less than 10,000 according to the 1960 census are: Buena Vista, Clifton Forge, Colonial Heights, Franklin, Galax, Norton, Radford, South Boston, and Williamsburg.
[11]Includes data for Bristol, Va., only.
[12]Includes data for Bluefield, W. Va., only.

Table 2-2. Live Births by Attendant, Birth Weight, and Color, for Population-Size Groups in Metropolitan and Nonmetropolitan Counties: United States and Each State, 1964

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. Urban places in metropolitan counties are those with populations of 10,000 or more; urban places in nonmetropolitan counties are those with populations of 10,000 or more but less than 50,000. For definition of areas, see Technical Appendix)

[1]Births attended by other and not specified persons are not shown separately but are included in total births. For the United States, these births totaled 12,954 in 1964.
[2]Includes births attended by physicians, midwives, or other persons in hospitals or institutions and births attended by physicians in clinics; see Technical Appendix.
[3]Equivalents of the gram weights in terms of pounds and ounces are as follows: 2,500 grams or less = 5 lb. 8 oz. or less; 2,501 grams or more = 5 lb. 9 oz. or more.
[4]County equivalents.
[5]Figures exclude approximately 1,800 live births recorded in this State; see Technical Appendix.

Section 3. Natality – Puerto Rico and Virgin Islands (U.S.)

Table		Page
3-1.	Live births and birth rates: Puerto Rico and Virgin Islands, 1940-64	3-3
3-2.	Live births by month for Puerto Rico and Virgin Islands; and by color for Virgin Islands: 1964	3-3
3-3.	Live births by birth weight for Puerto Rico and Virgin Islands; and by color for Virgin Islands: 1964	3-4
3-4.	Live births by period of gestation for Puerto Rico and Virgin Islands; and by color for Virgin Islands: 1964	3-4
3-5.	Number and ratio of illegitimate live births, by age of mother: Puerto Rico and Virgin Islands, 1964	3-4
3-6.	Live births by age of mother and live-birth order for Puerto Rico and Virgin Islands; and by color for Virgin Islands: 1964	3-5
3-7.	Live births by age of father and sex of child for Puerto Rico and Virgin Islands; and by color for Virgin Islands: 1964	3-5
3-8.	Live births by attendant: Puerto Rico and each municipio, 1964	3-6
3-9.	Live births by attendant and color: Virgin Islands by island and specified urban place, 1964	3-6

NOTES

Occurrence and residence allocation

In contrast with the method of allocating births to usual place of residence of the mother for each of the 50 States and the District of Columbia, residence data for the Commonwealth of Puerto Rico include only those births occurring in Puerto Rico. Births to nonresidents of the Commonwealth are included in the total, but births to residents of Puerto Rico occurring elsewhere are excluded. The same qualification applies to resident births in the Virgin Islands.

Data are shown by both place of occurrence and place of residence in Puerto Rico for the primary geographic subdivision, the "municipio," and in the Virgin Islands for St. Croix Island and St. John and St. Thomas Islands (the latter two combined). Births by place of residence are shown for municipios only and not for urban places for Puerto Rico; however, for the Virgin Islands they are shown for Charlotte Amalie, the only urban area having a population of 10,000 or more.

Race and color

For 1964, births are not shown by color for Puerto Rico; they are classified as white and nonwhite for the Virgin Islands.

Attendant at birth

In the United States, nearly all in-hospital births are attended by physicians; in Puerto Rico and the Virgin Islands, a large proportion of hospital births are attended by persons other than physicians.

Completeness of registration

Data for Puerto Rico and the Virgin Islands refer to registered births; no adjustment has been made for possible underreporting. Tests of birth registration completeness were made for these areas in 1950, and the results are given in Chapter 6 of Volume I of *Vital Statistics of the United States, 1950.*

The Technical Appendix, Section 4, discusses other factors concerning these natality statistics.

Table 3-1. Live Births and Birth Rates: Puerto Rico and Virgin Islands, 1940-64

(Refers only to births occurring within the specified area. Rates per 1,000 total population in each area except as noted. Rates for 1940, 1950, and 1960 based on population enumerated as of April 1; for all other years, estimated as of July 1)

Table 3-3. Live Births by Birth Weight for Puerto Rico and Virgin Islands; and by Color for Virgin Islands: 1964

(Refers only to births occurring within the specified area. Data for Puerto Rico based on a 50-percent sample)

AREA AND COLOR	Total	BIRTH WEIGHT[1]											
		500 grams or less	501-1,000 grams	1,001-1,500 grams	1,501-2,000 grams	2,001-2,500 grams	2,501-3,000 grams	3,001-3,500 grams	3,501-4,000 grams	4,001-4,500 grams	4,501-5,000 grams	5,001 grams or more	Not stated
Puerto Rico	78,956	48	258	480	1,306	5,562	19,446	29,866	16,470	4,068	960	116	376
Virgin Islands	1,762	4	11	22	20	106	374	748	383	77	13	2	2
White	101	-	-	2	2	3	9	46	29	9	1	-	-
Nonwhite	1,661	4	11	20	18	103	365	702	354	68	12	2	2

[1]Equivalents of the gram weights in terms of pounds and ounces are as follows:

500 grams or less = 1 lb. 1 oz. or less
501-1,000 grams = 1 lb. 2 oz. - 2 lb. 3 oz.
1,001-1,500 grams = 2 lb. 4 oz. - 3 lb. 4 oz.
1,501-2,000 grams = 3 lb. 5 oz. - 4 lb. 6 oz.
2,001-2,500 grams = 4 lb. 7 oz. - 5 lb. 8 oz.
2,501-3,000 grams = 5 lb. 9 oz. - 6 lb. 9 oz.
3,001-3,500 grams = 6 lb. 10 oz. - 7 lb. 11 oz.
3,501-4,000 grams = 7 lb. 12 oz. - 8 lb. 13 oz.
4,001-4,500 grams = 8 lb. 14 oz. - 9 lb. 14 oz.
4,501-5,000 grams = 9 lb. 15 oz. - 11 lb. 0 oz.
5,001 grams or more = 11 lb. 1 oz. or more

Table 3-4. Live Births by Period of Gestation for Puerto Rico and Virgin Islands; and by Color for Virgin Islands: 1964

(Refers only to births occurring within the specified area. Data for Puerto Rico based on a 50-percent sample)

AREA AND COLOR	Total	PERIOD OF GESTATION[1]									
		Under 20 weeks	20-27 weeks	28-31 weeks	32-35 weeks	36 weeks	37-39 weeks	40 weeks	41-42 weeks	43 weeks and over	Not stated

45-49 years	88	224.5	84	214.3	4	10.2	1	250.0

[1]In Puerto Rico, legitimacy status is not reported on the birth certificate. However, marital status of the parents is reported in three categories, legally married, not legally married and living together ("consensually married"), and not legally married and not living together. In their publications, the Department of Health of Puerto Rico describes as illegitimate all births to parents who are not legally married. The same practice is used in this table, but in addition the two marital status groups included in this category are shown separately.

Table 3-6. Live Births by Age of Mother and Live-Birth Order for Puerto Rico and Virgin Islands; and by Color for Virgin Islands: 1964

(Refers only to births occurring within the specified area. Data for Puerto Rico based on a 50-percent sample. Live-birth order refers to number of children born alive to mother. Figures for age of mother not stated are distributed)

SECTION 4. TECHNICAL APPENDIX

SOURCES OF DATA

Natality statistics

Natality statistics for 1964 are based on information obtained from microfilm copies of the original birth certificates. These copies are received from the registration offices of all States, certain cities, the District of Columbia, and Puerto Rico. The Virgin Islands sends transcripts rather than filmed copies of the certificates. The statistical information on these records was edited, classified, placed on punchcards, and tabulated in the National Center for Health Statistics (NCHS).

The United States birth registration system covers the 50 States, the District of Columbia, Puerto Rico, and the Virgin Islands. However, in the statistical tabulations, *United States* refers only to the aggregate of the 50 States and the District of Columbia. Tabulations for Puerto Rico and the Virgin Islands are shown separately in Section 3 of this volume.

Natality data for the United States are confined to births occurring within the United States, including those occurring to nonresident aliens. Births occurring to U.S. citizens outside the United States are not included. Similarly, the data for Puerto Rico and the Virgin Islands are confined to births registered in these areas.

Standard Certificate of Live Birth

The Standard Certificate of Live Birth, issued by the Public Health Service, has served for many years as the principal means of attaining uniformity in the content of the documents used to collect information on births in the United States. It has been modified in each State to the extent required by the particular needs of the State or by special provisions of the State vital statistics law. However, the certificates of most States conform closely in content and arrangement to the standard certificate.

The first issue of the standard certificate of birth appeared shortly before the formation of the registration area in 1915. Since then it has been revised periodically by the national vital statistics agency through consultation with State health officers and registrars; Federal agencies concerned with vital statistics; national, State, and county medical societies; and others working in the fields of public health, social welfare. demography, and insurance. This revision procedure has assured careful evaluation of each item in terms of its current and future usefulness for registration, identification, legal, medical, and research purposes. New items have been added when necessary, and old items have been modified to ensure better reporting or in some cases have been dropped when their usefulness appeared to be limited.

The most recent revision of the Standard Certificate of Live Birth occurred in 1955. It was made in close collaboration with the Public Health Conference on Records and Statistics and was recommended to the States for adoption as of January 1, 1956 (figure 4-A). With a few exceptions, only minor changes in content and format were made in the 1956 revision of the standard certificate. In an effort to obtain a more accurate designation for place of residence, the question "Is residence inside city limits?" was added. Table 4-1 indicates the States that did and those that did not include the checkbox item on residence within city limits on all or part of the certificate forms which they used during 1964.

HISTORY

The national birth-registration area was proposed in 1850, was established in 1915, and became complete and conterminous with all 48 States and the District of Columbia in 1933. The organized territories of Hawaii and Alaska were admitted in 1929 and 1950, respectively; data from these areas were prepared separately until they became States—Alaska in 1959 and Hawaii in 1960.

The original birth-registration area of 1915 consisted of 10 States and the District of Columbia. The growth of this area is indicated in table 4-2. Table 4-2 also presents for each year through 1932 the estimated midyear population of the United States and of those States included in the registration system.

Because of the growth of the area for which data have been collected and tabulated, a national series of geographically comparable data prior to 1933 can be obtained only by estimation. Annual estimates of births have been prepared by P. K. Whelpton for the period 1909-34 (table 1-2 in Section 1). These estimates include an adjustment for underregistration and for States not in the birth-registration area prior to 1933.

CLASSIFICATION OF DATA

The principal value of vital statistics data is obtained through the presentation of the data in the form of rates which are computed by relating the vital events of a class to the population of a similarly defined class. Vital statistics and population statistics must therefore be classified according to similarly defined systems and tabulated in comparable groups. Even when the variables common to both, such as geographic area, age, race, and sex, have been similarly classified and tabulated, differences between the enumeration method of obtaining population data and the registration method of obtaining vital statistics data may result in significant discrepancies.

The general rules used in the classification of geographic and personal items for live births are set forth in the *Vital Statistics Instruction Manual* "1964 Live Births and Fetal Deaths, Coding and Punching Instructions." The classification of certain important items is discussed on the following pages.

Classification by occurrence and residence

For the 1964 statistics by place of occurrence, births are classified according to the county in which the birth took place but are not classified by smaller geographic units. For vital statistics for years prior to 1960, place of occurrence was classified by smaller units within the county in the same detail as statistics by place of residence.

Tabulations by place of occurrence include all births occurring in a given county. In residence tabulations, all births are allocated to the usual place of residence of the mother as reported on the birth certificate except as noted below.

1956 REVISION OF STANDARD CERTIFICATE
DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE—PUBLIC HEALTH SERVICE
PHS-796 REV. 11-54
GPO: 1955 O - 335373

The data by place of residence are classified by units within a county as follows: (1) each incorporated place of 10,000 inhabitants or more, (2) each unincorporated place of 10,000 inhabitants or more classified as urban under special rule, and (3) balance of the county.

Beginning in 1964, births to nonresident aliens occurring in the 50 States and the District of Columbia were allocated as births to residents of the balance of the county in which they occurred. For 1963 and prior years, births to nonresident aliens were treated as births to residents of the exact place of occurrence, which in most instances was an urban area. No evaluation of the effect of this change has been made.

The same change in the rule for assigning residence of nonresident aliens for 1964 was made to births of residents of Puerto Rico and the Virgin Islands that occurred in the 50 States and the District of Columbia, that is, such events were allocated to the balance of the county in which the event occurred.

Residence error.—A nationwide test of birth registration completeness in 1950 provided measures of residence error for natality statistics. The 1950 test indicates that for the country as a whole, errors in residence reporting result in a significant overstatement of births to residents of urban places and a corresponding understatement in the number to residents of areas not classified as urban.

The extent of bias varies from State to State and from city to city within the same State. Residence errors occur largely because of the major growth in population areas close to cities. Frequently, parts of these surrounding areas have city mailing addresses, and unless special care is taken in asking for residence information,

Table 4-1. Inclusion of Checkbox Item for Usual Residence on Certificates of Birth, Death, and Fetal Death: United States, 1964

(In general, certificates containing checkbox items on usual residence are those certificates revised since the 1956 revisions of the standard certificates. The standard certificates contain the checkbox item "Is residence inside city limits?" Data were abstracted from copies of certificates received in the National Center for Health Statistics and include only those certificates used by the areas during all or part of 1964. Certificates revised in 1964 but not in use during the year are not included)

they may be identified as being inside the cities. This situation has assumed special importance because of a concomitant development, the increased utilization of hospitals in cities by residents of nearby places. Misstatements of residence are more likely to remain undetected in such cases than when the birth occurs in the place of residence.

Geographic classification

The rules followed in the classification of geographic areas for live births are contained in the instruction manual mentioned above. The geographic code structure for 1964 is given in another entitled "Geographic Codes."

Standard metropolitan statistical areas.—The standard metropolitan statistical areas (SMSA's) used in this report are the same as those established by the U.S. Bureau of the Budget as of 1960 (except in the New England States) and used by the U.S. Bureau of the Census.

Except in the New England States, an SMSA is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000 in the 1960 census. Contiguous counties are included in an SMSA if, according to specified criteria, they are (1) essentially metropolitan in character and (2) socially and economically integrated with the central city or cities.[1]

In New England the Bureau of the Budget uses towns and cities rather than counties as geographic components of SMSA's. The National Center for Health Statistics cannot use the SMSA classification for these States because its data are not coded to identify all towns. Instead the metropolitan State economic area (MSEA) established by the Bureau of the Census, which is made up of county units, is used.[2]

Standard consolidated areas.— For the metropolitan complexes around New York and Chicago, several contiguous SMSA's and additional counties that do not appear to meet the formal integration criteria for SMSA's but do have strong interrelationships of other kinds have been combined into the New York-Northeastern New Jersey and the Chicago-Northwestern Indiana Standard Consolidated Areas.[3]

Metropolitan and nonmetropolitan counties.—Counties included in SMSA's or in New England MSEA's are called metropolitan counties; all other counties are classified as nonmetropolitan.

Population-size groups (formerly "urban and rural areas").—Vital statistics data for cities and certain other urban places in 1964 are classified according to the population enumerated in the 1960 Census of Population. The classification of vital statistics for cities and other urban places by size of population was changed in 1964. For prior years each incorporated city and other urban place of 10,000 or more inhabitants was identified in the tabulations, and cities and other urban places of 2,500 to 10,000 inhabitants were tabulated as a group within each county. These cities and other urban places made up the "urban" population, and the remaining population was classified as "rural." In the 1964 tabulations the group of cities and other urban places of 2,500 to 10,000 population is not separately identified but is included with the areas formerly classified as rural. Data continue to be available for the individual cities and other urban places of 10,000 or more population. Data for the remaining areas are shown in the tables under the heading "balance of area" or "balance of county."

This change has the effect of eliminating the classification of vital statistics into "urban" and "rural" categories. The national and State vital statistics offices have found it impossible to use the definition of "urban" followed in the population census since boundary delineations for many urban unincorporated places were made by the Bureau of the Census for enumeration purposes only and cannot be identified from the vital records. The differences between the urban and rural distribution of the population according to the Bureau of the Census and NCHS definitions are large enough to make undesirable the computation of vital rates from the two sets of data.

Urban places other than incorporated cities for which vital statistics data are shown in the 1964 report include

1. Each town in New England and each township in New Jersey and Pennsylvania that had no incorporated municipality as a subdivision and had either 25,000 inhabitants or more or a population of 10,000 to 25,000 and a density of 1,500 persons or more per square mile.
2. Each county in States other than the New England States, New Jersey, and Pennsylvania that had no incorporated municipality within its boundary and had a density of 1,500 persons or more per square mile. (Arlington County, Virginia, is the only county classified as urban under this rule.)

Age of mother

The birth certificate asks for "age (at time of this birth)." While no restrictions are placed on the reported age of the father, age of the mother is edited for upper and lower limits. When mothers are reported to be below 13 years of age, the birth record is inspected and queried if necessary. Mothers reported to be age 50 or above are considered to have age "not stated" and their age is allocated as described below. Tests of birth registration completeness in 1940 and 1950 show coverage to be about the same for all age groups except for the oldest, where coverage is slightly lower.[4]

[4]National Vital Statistics Division: Matched record comparison of birth certificate and census information, United States, 1950, by J. Schachter. *Vital Statistics–Special Reports,* Vol. 47, No. 12. Public Health Service. Washington, D.C., Mar. 1962.

Age-specific birth rates shown in this report use populations of women by age in conjunction with births by age of the mother. The populations are estimated by the U.S. Bureau of the Census, which beginning with the 1960 Census of Population asked for age in a manner different from previous censuses. The current census question is "When was this person born?" and the replies are birth dates in terms of year and month. In censuses prior to 1960, "age in completed years" was asked for. This was nearly the equivalent of the birth certificate question, which the 1950 matched test of birth and census records confirms by showing a high degree of consistency in the reporting of age in these two sources.[5]

Median age of mother.—Median age is the value which divides an age distribution into two equal parts, one half of the values being less and one half being greater. In reports prior to 1964 median age was computed from birth frequencies by 5-year age groups of mothers; beginning with 1964, medians are computed from age-specific birth rates for 5-year age groups in order to eliminate the effects of changes in the age composition of the childbearing population.

Not stated age of mother.—Beginning with 1964, age-of-mother category "not stated" includes those mothers reported as 50 years and older. A check of 1962 birth records showed that most of the reports of mothers aged 50 years and over were in error. As in 1963, birth records with age "not stated" were allocated according to the age appearing on the record previously processed for a mother of identical color and parity. The 1964 procedure was modified, however, to include fetal deaths in defining parity. Parity ordinarily refers to the total live births a woman has had. For the years 1960-62 "not stated" or unknown ages were distributed in proportion to the known ages for each color group. Prior to 1960 this was also done for age-specific birth rates but not for the birth frequency tables, which have a special category for "age not stated."

Live-birth order

Birth order or parity classifications shown in this volume refer to the total number of live births the mother has had. This excludes fetal deaths and includes the 1964 birth and previous births as ascertained from two questions on the birth certificate, "How many other children are now living?" and "How many other children were born alive but are now dead?"

Race and color

Births in the United States in 1964 are classified for statistical purposes according to the race of the parents. The racial categories are "white," Negro, American Indian, Chinese, Japanese, Hawaiian and Part-Hawaiian combined, and "other nonwhite." In most tables a less detailed classification of "white" and "nonwhite" is used.

The category "white" comprises births reported as white, Mexican, Puerto Rican, and Cuban and prior to 1964 all births for which race was not stated. Beginning in 1964 a portion of the race not stated frequencies are assigned to Negro.

The category "nonwhite" comprises Negro, American Indian, Chinese, Japanese, Hawaiian and Part-Hawaiian, and "other nonwhite." Beginning in 1964 Aleuts and Eskimos are included in American Indian, significantly increasing the births in this racial category when comparisons are made with previous years. The State of Alaska is particularly affected in this regard. Prior to 1964 Aleuts and Eskimos were assigned to the "other races" category. Also beginning with 1964 ill-defined or not clearly identifiable races are assigned to "race not stated." This includes such reports as "oriental" and "yellow," which in previous years were assigned to a specific category such as other nonwhite, Chinese, or Japanese. The number of births classified as Chinese, Japanese, and other nonwhite in 1964 is thereby considerably less than the number assigned to these categories in previous years.

The newborn child is ordinarily assigned to the race of his parents. If the parents are of different races, the following rules apply: (1) When the parental combination is white-nonwhite, the child is assigned to the nonwhite race. (2) When the parental combination is of two nonwhite races, the child is assigned to the father's race with two exceptions. If the mother is Hawaiian or Part-Hawaiian, the child is assigned to Hawaiian; if the mother is Negro and the father is not Hawaiian, the child is assigned to Negro.

The quality of birth data by race is variable in that coverage is higher for the white group than for the nonwhite. In 1964 birth registration completeness was estimated to be 99.4 percent for the white and 96.9 percent for the nonwhite. The most recent figures for other groups are from the 1950 test, when the percentage for American Indians was estimated to be 85.1 percent and that for "other races," chiefly Chinese and Japanese, 97.4 percent. Both figures are probably higher for 1964, but more precise estimates are unavailable.

Race not stated.—The birth records with race not stated are those on which the race of both parents was missing or ill-defined. When the race of only one parent was missing or ill-defined, the race of the other determined that of the child. Beginning in 1964 when race was not stated, the race of the child was allocated, as the birth record was electronically processed, to white or Negro according to the race of the child on the preceding record. If the race on the preceding record was white, the assignment was to white; if it was nonwhite, the assignment was to Negro. Approximately 7,218 births in 1964, or 0.2 percent of total births, were assigned in this manner.

New Jersey.—For New Jersey the assignment of race not stated was allocated by a special method since these births numbered 12,758, or about 10 percent of the births in the State, during 1964. The method was to assign the not stated cases randomly within each county and city to the white and Negro categories according to the distribution of white and nonwhite births on the records where race

[5]Ibid.

was stated. For 1962 and 1963 figures by race were not available for New Jersey because the item on color or race was omitted from the certificates of live birth, death, and fetal death in use at the beginning of 1962. The item was restored during the latter part of 1962. However, because the certificate without the race item was used for most of 1962 and 1963, births were not tabulated by color or race for those years.

All statistics by color or race for the United States as a whole in 1962 and 1963 are affected by the lack of information for the State of New Jersey. Birth frequencies in those years contain unusually large proportions of color or race not stated. Birth rates by color or race for those years are computed on a population base which excludes New Jersey. (For the method of estimating the United States population by age, sex, and color excluding New Jersey in 1962 and 1963, see *Vital Statistics of the United States, 1963,* Volume I, page 4-8.)

Illegitimate births

Legitimacy status is reported in 34 States and the District of Columbia. The following 16 States did not report legitimacy in 1964: Arizona, Arkansas, California, Colorado, Connecticut, Georgia, Idaho, Maryland, Massachusetts, Montana, Nebraska, New Hampshire, New Mexico, New York, Oklahoma, and Vermont.

In making estimates of the number of illegitimate births occurring in the country as a whole, the States are grouped into the nine geographic divisions. The combined ratio of illegitimate births per 1,000 total live births for all reporting States in a single geographic division is then applied to all the live births occurring to residents of that division. This yields an estimate of illegitimate live births for the geographic division. This estimating procedure is done separately for white and nonwhite births, which are subsequently added. The sum of these estimates for the nine geographic divisions makes up the estimate for the United States.

In processing the data, no adjustments were included for misstatements of legitimacy status on the birth record or for failure to register illegitimate births as the extent of these errors is unknown. A birth with legitimacy status not stated is considered to be legitimate. Illegitimacy figures for each reporting State are based on a 50-percent sample of births occurring to its residents within the 34 reporting States of the United States and the District of Columbia.

For illegitimate births reported as second or higher birth orders, it is not known whether previous deliveries to the mother occurred out of wedlock since the marital status of the mother at the time of these earlier pregnancies is not available from the birth record.[6]

[6]For detailed reports on data for illegitimate births, see National Office of Vital Statistics, "Illegitimate Births, United States, 1938-57," by J. Schachter and M. McCarthy, *Vital Statistics—Special Reports,* Vol. 47, No. 8, Public Health Service, Washington, D.C., Sept. 1960, and New York State Department of Social Welfare, *Deterrents to Early Prenatal Care and Social Services Among Women Pregnant Out of Wedlock,* by B. Bernstein and M. Sauber, Albany, N.Y., 1960.

Attendant at birth

The classification of births by attendant at birth combines information about place of delivery and the person in attendance at birth. Births occurring in hospitals and institutions regardless of the person in attendance and those occurring in clinics, centers, or homes that were attended by physicians are included in the category "physician in hospital." In this context the word "home" does not refer to the mother's residence but to an institution such as a home for unwed mothers.

In previous years it was assumed that all births occurring in hospitals were delivered by physicians. However, a special tabulation of births in 1964 showed that 97 percent of the 3,834,334 births that occurred in hospitals or institutions were delivered by physicians. Of the remainder, 3,902 were delivered by midwives (these were probably certified nurse midwives, who are registered nurses trained in obstetrics) and 97,496 were delivered by persons other than physicians and midwives or by persons for whom no status was specified. Nevertheless, all these births are included in the category "physician in hospital."

For births occurring outside hospitals, the place of delivery is not considered in classifying births by attendant at birth. Persons specified as other than physicians and midwives and for whom no status is given are shown separately.

The place of delivery of an infant born in a moving vehicle is defined as the place where he was removed from the vehicle; for instance, babies born en route to the hospital are referred to as having been born in the hospital. This may account for some of the hospital births not delivered by physicians.

Birth weight

In practically all areas birth weight is reported in terms of pounds and ounces rather than in grams. However, the metric system has been used in tabulating and presenting the statistics to facilitate comparison with data published by other groups in the United States. The equivalents in pounds and ounces of the gram intervals are given in each table containing weight data.

For purposes of classification the term "immature" refers to infants weighing 2,500 grams or less at birth. This definition was recommended by the American Academy of Pediatrics in 1935 and adopted by the World Health Organization in the Sixth Revision of the International Lists of Diseases and Causes of Death (1948). The NCHS definition of "premature" is based on the period of gestation and is given below.

Median weights were, in effect, computed from data classified by pounds and ounces, then converted to grams, and rounded for publication. To establish the continuity of class intervals needed to compute medians, the end points of these intervals were assumed to be half an ounce less at the lower end and half an ounce more at the upper end. For example, 2 lb. 4 oz. to 3 lb. 4 oz. is interpreted as 2 lb. 3½ oz. to 3 lb. 4½ oz.

Period of gestation

The period of gestation is defined as beginning with the first day of the last normal menstrual period (LMP) and ending with the day of birth. The LMP is used as the initial date since it can be more accurately determined than the date of conception, which usually occurs 2 weeks after LMP.

Births occurring prior to 37 weeks of gestation are considered to be premature for purposes of classification in accordance with the definition of the World Health Organization Expert Group on Prematurity in 1950.

An examination of the reported information on period of gestation suggests a substantial heaping at the intervals "36 weeks" and "40 weeks and over." These biases result from the fact that the gestation period is frequently not carefully observed and that the newborn infant of normal size is generally assumed to have had a gestation period of 40 weeks or 9 months, depending upon conventional usage. Such errors in reporting are minimized in areas where the gestation period item on the birth certificate requests the "first day of the last normal menstrual period." Areas using this wording of the item are California, the city of Baltimore, the District of Columbia, and New York City.

Maryland and Massachusetts.—Maryland, except for the city of Baltimore, and Massachusetts did not require reporting of gestation in 1964. The gestation data shown for Massachusetts are only for births to Massachusetts residents occurring in other States. These comprised only 1.4 percent of all births to Massachusetts residents in 1964. For Maryland residents about 55.0 percent of the 1964 births include period of gestation; most of these births occurred in Baltimore and the balance outside the State.

QUALITY OF DATA

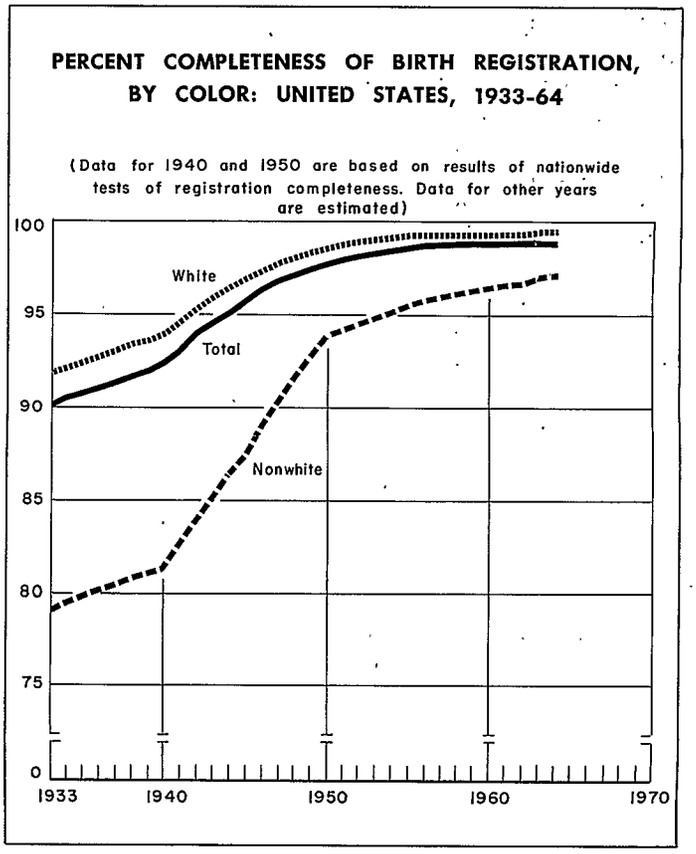
While vital statistics data are useful for a variety of administrative and scientific purposes, they cannot be correctly interpreted unless various qualifying factors and methods of classification are taken into account. The factors to be considered depend on the specific purposes for which the data are to be used. It is not feasible to discuss all the pertinent factors in the use of vital statistics tabulations, but some of the more important ones should be mentioned.

Most of the factors limiting the use of the data arise from imperfections in the original records or from the impracticability of tabulating these data in very detailed categories. These defects should not be ignored, but their existence does not vitiate the value of the data for most general purposes.

Completeness of registration

It is estimated that 98.9 percent of all births occurring in the United States in 1964 were registered. This estimate is based on results of the 1950 test of birth registration completeness, which indicated that 98.6 percent of white births and 93.6 percent of nonwhite births were registered in that year. Estimates of birth registration completeness by color since 1933 are shown in table 1-21, Section 1, and in figure 4-B, which follows. (For a detailed discussion of the method and results of the 1950 birth registration test, see *Vital Statistics of the United States, 1950,* Volume I, Chapter 6.)

FIGURE 4-B



Discontinuation of adjustment for underregistration, 1960.—Adjustment for underregistration of births was discontinued in 1960, when birth registration for the United States was estimated to be 98.9 percent complete. Continuing adjustment was considered unwarranted in view of the fact that 10 years had elapsed since the last test of birth registration completeness in 1950. The results of this test form the basis for all adjustment in the subsequent years. The adjustments were made by assuming that registration completeness of births classified by place of delivery, color, and State in 1950 prevailed in the year in question. Such assumptions become more tenuous as we move further away from 1950.

Another reason for the discontinuation of adjustment for underregistration was the bias introduced into age-specific rates when adjusted births classified by age were used. Age-specific rates are calculated by dividing the number of births to an age group of mothers by the population of women in that age group. Tests have shown that population figures are likely to be understated through census undercounts; these errors compensate for underregistration of births. Adjustment for underregistration of births therefore removes the compensating error of underenumeration, biasing the age-specific rates more than when uncorrected birth and population data are used. (For further details, see *Vital Statistics of the United States, 1963,* Volume I, page 4-11.)

The age-specific rates used in the cohort fertility tables (tables 1-14 through 1-19 in Section 1) represent an

exception to the above statement. These rates are computed from births corrected for underregistration and population estimates adjusted for underenumeration and misstatement of age. Adjusted births and population estimates were used for the cohort rates because they are an integral part of a series of rates, estimated with a consistent methodology, that extends back to 1917. It was considered desirable to maintain consistency with respect to the cohort rates, even though it means that they will not be precisely comparable with other rates shown for 5-year age groups.

Massachusetts.—In 1964, figures for live births exclude approximately 1,800 live births occurring in Massachusetts, primarily to residents of that State. Microfilm copies of these records were not received by NCHS. Figures for every area in Massachusetts are understated.

Another factor affecting the comparability of Massachusetts data for 1964 with that of previous years results from changes in records management in that State. Prior to 1964, birth certificates for a large number of intrastate nonresident births were received from both the place of residence of the mother and the place of occurrence of the birth, for the same live birth. Failure to identify two documents referring to the same event, in processing, resulted in an overstatement of an estimated 4 percent for births to residents in Massachusetts. Beginning in 1964, duplication of records was virtually eliminated.

Quality control procedures

The coding and punching of birth data were performed simultaneously directly from microfilm images or transcripts of the original certificates. Approximately 83 percent of all cards punched were verified on a 10-percent systematic sample. The expected result from this system of verification is that on the average 2.25 percent of the cards will contain one or more errors. The rest of the cards were verified completely, and the errors remaining are presumably very few.

Both systems of verification involve controlling two types of error (coding and punching) at the same time, and the error rates are a combined measure of both types. While it may be assumed that punching errors are randomly distributed across all items on the card, this assumption cannot be made as readily for coding errors. It is possible for systematic errors in coding rare events to escape detection during sample verification. This is partially controlled by complete reverification of randomly selected lots from each operator's work. Errors detected by any method of verification are reviewed to determine coding bias.

After completion of coding and punching, card counts are balanced against control totals for each shipment of records from a registration area. Impossible codes are selected out during the editing processes on the computer and are corrected on the basis of reference to the source record or adjusted by arbitrary code assignment. All subsequent operations involved in tabulating and table preparation are verified during the computer processing or by statistical clerks.

Sampling of birth records

Final birth data for 1951-54 and 1956-64 have been derived from 50-percent samples which consist of only even-numbered birth records. This applies to data for all States, the District of Columbia, and Puerto Rico. Data for the Virgin Islands are based on all the records filed. Statistics for these years were obtained by multiplying the sample figures by 2. Prior to 1951 and for 1955, annual birth statistics were based on the total file of birth records.

The sample data represent estimates which differ somewhat from figures that would have been derived by processing all the records. However, the manner in which records are numbered greatly reduces the sampling variability of totals for geographic areas. With few exceptions, records are numbered in the State offices of vital statistics as they are received from the local offices. The assignment of the last digit in the number is not selective, and the systematic sample of even-numbered records may be assumed to be unbiased. Furthermore, because the records are almost always in geographic order before numbering, twice the sample count of births occurring in the great majority of counties in table 2-1 in Section 2 is virtually the same as the corresponding figure based on all records.

The extent to which residence figures for urban places, counties, and States derived from the sample differ from the totals that would have resulted from a complete count depends on the amount of nonresident interchange. (This assumes virtually no error in the figures on a place-of-occurrence basis.) Since there is relatively little nonresident interchange of births among the States and between "metropolitan" and "nonmetropolitan" groups of counties in any State, the sampling errors for these geographic units are negligible.

The nonresident interchange factor is more important for many individual urban places and counties. Figures are not shown in this volume on the amount of nonresident interchange in individual counties, but the net situation for a county can be determined by comparing the figures by place of occurrence and those by place of residence in table 2-1.

The percent error due to sampling in a county resident total varies between zero and the value obtained from the table shown below. The amount of the error depends on the extent of nonresident interchange as judged from this comparison. The table presents approximate percent errors in the 1951-54 and 1956-64 figures for variates which are randomly distributed. The chances are about 2 out of 3 that the percent difference due to sampling variability between such a figure and the result that would be obtained by a complete count is less than the percent error. The chances are about 19 out of 20 that the percent difference is less than twice the percent error.

NUMBER OF BIRTHS WITH A SPECIFIED CHARACTERISTIC	BIRTHS TO RESIDENTS OF AREA[1]					
	2,000	5,000	10,000	20,000	50,000	500,000
30	18.3	18.3	18.3	18.3	18.3	18.3
50	14.1	14.1	14.1	14.1	14.1	14.1

100,000	...	...	...	...	...	0.3

[1]An "area" is the smallest geographic unit to which the figure under consideration pertains.

COMPUTATION OF RATES

Population bases

Birth rates shown in this report for the United States and the individual States are based on the populations present in the respective areas. These populations exclude the Armed Forces overseas and persons living abroad but include the Armed Forces stationed in each area.

Population estimates for the United States.—Estimates from the U.S. Bureau of the Census of the total resident population excluding Armed Forces abroad and estimates including Armed Forces abroad for 1964 and other years are shown in table 4-2. Estimates of the population by age, color, and sex in 1964 published by the Bureau of the Census in *Current Population Reports,* Series P-25, No. 293, are shown in table 4-3. These populations are based on data from the 1960 census, final counts of births and deaths for 1960 and preliminary counts through June 1964, statistics on persons arriving from abroad as reported by the Immigration and Naturalization Service, and data on the size and distribution of the Armed Forces.

Population estimates for each State.—Provisional estimates of the total resident population of each State as of July 1, 1964, are published by the Bureau of the Census in *Current Population Reports,* Series P-25, No. 289. Similar estimates for Puerto Rico and the Virgin Islands are published in Series P-25, No. 300. These estimates are reproduced in table 4-4.

Estimates of the total resident population by State as of July 1, 1963, have been revised by the Bureau of the Census in light of more current data. However, 1963 birth rates by State, geographic division, and region published in this volume were not recomputed and are the same as those published in *Vital Statistics of the United States, 1963,* Volume I. They are based on unrevised State population estimates published in Series P-25, No. 273. The revised estimates (Series P-25, No. 289) range from 6 percent smaller to 4 percent larger than the unrevised estimates (Series P-25, No. 273); most differ by about 1.5 percent. Rates for 1963 based on the revised estimates would differ accordingly.

Population estimates for cohort fertility tables.—The various fertility measures shown for cohorts of women in tables 1-14 through 1-19 (Section 1) are computed from births adjusted for underregistration and population estimates corrected for underenumeration and misstatement of age. These estimates were prepared by the Scripps Foundation for Research in Population Problems and are described in Section A of the methodological appendix in a previous report.[7] The method described for population estimates for the years 1955-57 was also used for estimating populations in 1958-64.

Computation of intrinsic vital rates

The intrinsic vital rates shown in table 1-5 in Section 1 are calculated from a stable population. A stable population is that hypothetical population, closed to external migration, which would become fixed in age-sex structure after repeated applications of a constant set of age-sex specific birth and death rates. (For the mathematical derivation of intrinsic vital rates, see *Vital Statistics of the United States, 1962,* Volume I, pages 4-13 and 4-14. For the techniques of calculating intrinsic vital rates, see *Techniques of Population Analysis,* by George W. Barclay, New York, John Wiley and Sons, Inc., 1958, pages 216-222.)

Computation of seasonal index

The seasonal indexes for 1955-64 are based largely on computations prepared using the 1964 BLS Seasonal Factor Method.[8] This method is an adaptation of the standard ratio-to-moving-average method, which assumes that ratios of the original observations to a 12-month moving average include the seasonal and erratic components of a series but not the trend and cyclical components and that the averages of the ratios for each of the 12 months measure the seasonal component alone.

Computation of parity distribution

The percentage distributions of women by parity (number of children ever born to mother) shown in table 1-14 in Section 1 are derived from cumulative birth rates by order of birth, which are shown in table 1-17. The percentage of zero-parity women is found by subtracting the cumulative first birth rate from 1,000 and dividing by 10. The proportions of women at parities one through six are found from the following formula:

$$\text{Percent at N parity} = \frac{(\text{cum. rate, order N+1}) - (\text{cum. rate, order N})}{10}$$

The percentage of women at seventh and higher parities is found by dividing the cumulative rate for seventh order births by 10.
