

What's On Her Mind?

Audio Descriptive Text

The main character walks in the parking lot of a hospital clinic. She stops and looks up, and a thought bubble animates onto the screen.

An image of the main character filling out a form reading “Patient Family Health History” on a clipboard appears within the thought bubble. Only a few of the fields are filled out.

The main character taps her pen on the clipboard.

Within the thought bubble, the image shifts to a scene of what the main character imagines to be an uncomfortable doctor’s appointment. Three dots animate behind the main character’s head.

The scene transitions back to the real world, where the main character sits across from her doctor in an exam room.

The video zooms in on the main character. As she’s talking, a family tree appears within a speech bubble. There are question marks in place of some family members.

The video zooms in on the doctor. A speech bubble including the ovarian and uterine cancer ribbons appears as she’s speaking.

The video zooms back out to the full exam room. Icons of documents, family members talking, and a magnifying glass over a DNA strand animate on the screen.

The final screen displays the *Inside Knowledge*, HHS, and CDC logos and directs viewers to visit cdc.gov/cancer/knowledge.

Text reads: Talk to your doctor about family history and other risk factors for ovarian and uterine cancer.

Script

Main character (internal monologue): My doctor's gonna ask about my family health history—but I don't know a lot about it.

Main character (internal monologue): It's always so uncomfortable. I guess I should share what I know...

Doctor (spoken): ...and any family history of cancer?

Main character (spoken): I think there are people in my family who have had cancer—but I don't know much more.

Doctor (spoken): I'm glad you shared. Having a family history of some cancers can raise your risk of uterine or ovarian cancers. Let's talk about the information you can try to collect to learn a little more about that.

Narrator: It's okay if you don't have all the answers. Talk to your doctor about family history and other risk factors for ovarian and uterine cancer.

Video Summary

This video encourages women to share what they know about their family health history with their doctor so they can take action on their risk for ovarian and uterine cancers.
