

# HIV PREVENTION in West Virginia

Since the late 1980s, CDC has partnered with state and local health departments to expand the impact and reach of its HIV prevention activities.

CDC awarded **\$1.9M** in FY2024 to health departments and community-based organizations in West Virginia for HIV prevention and care activities.

CDC collects and disseminates data on **6** key indicators. Current data are available online at [AtlasPlus](https://atlasplus.cdc.gov/)\* and on [HHS AHEAD](https://ahead.hiv.gov/)† for each jurisdiction.

**3,100**  
people are  
living with  
HIV in  
West  
Virginia.

West Virginians  
with HIV will face an  
average lifetime cost  
of **\$554,000** to  
treat their infection  
(2024 dollars).

## DIAGNOSE all people with HIV as early as possible

### Knowledge of Status (2022)

Across the country,

**87.2%**

of people living with HIV were  
**aware of their status**, meaning approximately  
**12.8%** were **unaware** and are not getting  
the HIV care they need.

**72.5%**

of West Virginians with HIV were  
**aware of their status**, meaning  
approximately **27.5%** were **unaware** and  
are not getting the HIV care they need.

### Self-Testing

CDC is providing free HIV self-test kits to populations disproportionately affected by HIV. CDC and partners have sent out over **750,000** tests.

**3,721**

HIV tests were provided in  
West Virginia with CDC funding.

## How CDC Dollars Are Improving Diagnosis

- **Expanding** routine screening of people in health care settings, including emergency departments
- **Increasing** testing in non-clinical settings (e.g., jails, community serving organizations, street-based services)
- **Increasing** access to and use of HIV self-tests
- **Integrating** sexually transmitted infections (STI) and viral hepatitis screening into HIV testing services

† <https://ahead.hiv.gov/>

## TREAT people with HIV rapidly and effectively to reach sustained viral suppression

### Viral Suppression (2022)

**65.1%**

of people across the country, with diagnosed HIV, **were virally suppressed.**

**41.9%**

of West Virginians, with diagnosed HIV, **were virally suppressed.**

### How CDC Dollars Are Improving Treatment

- **Expanding** access to rapid HIV treatment including long-acting injectables
- **Linking** people with HIV to care within one month to facilitate rapid access to HIV medicine
- **Integrating** HIV, STI, and hepatitis treatment to provide efficient and cost-effective care

## PREVENT

new HIV transmissions by using proven interventions, including pre-exposure prophylaxis (PrEP)

### PrEP

**PrEP is a medicine** that people at risk for HIV take to prevent getting HIV from sex or injection drug use.

West Virginia's CDC-funded HIV testing programs identified **377 persons who were eligible** for PrEP in 2022.

### How CDC Dollars Are Improving Prevention

- **Expanding** access to PrEP through innovations such as long-acting injectable PrEP, Post-Exposure Prophylaxis, and focused provider education
- **Implementing** a whole-person approach to HIV prevention and care to help overcome barriers

## RESPOND early to potential HIV clusters or outbreaks

Cutting-edge public health approaches turn HIV data into action by **identifying areas with rapid transmission and expanding resources** to maximize prevention and treatment efforts.

**404**

**clusters of HIV infections** reported to CDC from 2022 through 2024.

### How CDC Dollars Are Improving Response

- **Addressing** gaps in prevention and care contributing to rapid transmission
- **Engaging** communities and partners to respond to outbreaks
