

HIV PREVENTION in Texas

Since the late 1980s, CDC has partnered with state and local health departments to expand the impact and reach of its HIV prevention activities.

CDC awarded **\$47.5M** in FY2024 to health departments, community-based organizations, and other organizations in Texas for HIV prevention and care activities, including **\$9.5M** in *Ending the HIV Epidemic (EHE)* funding.

CDC collects and disseminates data on **6 key indicators**. Current data are available online at [AtlasPlus*](#) and on [HHS AHEAD†](#) for each jurisdiction.

125,100
people are
living with
HIV in
Texas.

In Texas
between 2018 and 2022,
overall HIV incidence
decreased, preventing an
estimated **700 new HIV**
infections and **saving**
\$387M in lifetime
medical costs.

DIAGNOSE all people with HIV as early as possible

Knowledge of Status (2022)

Across the country,

87.2%

of people living with HIV **were aware of their status**, meaning approximately **12.8% were unaware** and are not getting the HIV care they need.

83.6%

of Texans with HIV were **aware of their status**, meaning approximately **16.4% were unaware** and are not getting the HIV care they need.

Self-Testing

CDC is providing free HIV self-test kits to populations disproportionately affected by HIV. CDC and partners have sent out over **750,000** tests.

331,043

HIV tests were provided
in Texas with CDC funding.

How CDC Dollars Are Improving Diagnosis

- **Expanding** routine screening of people in health care settings, including emergency departments
- **Increasing** testing in non-clinical settings (e.g., jails, community serving organizations, street-based services)
- **Increasing** access to and use of HIV self-tests
- **Integrating** sexually transmitted infections (STI) and viral hepatitis screening into HIV testing services

TREAT people with HIV rapidly and effectively to reach sustained viral suppression

Viral Suppression (2022)

65.1%

of people across the country, with diagnosed HIV, **were virally suppressed.**

61.5%

of Texans, with diagnosed HIV, **were virally suppressed.**

How CDC Dollars Are Improving Treatment

- **Expanding** access to rapid HIV treatment including long-acting injectables
- **Linking** people with HIV to care within one month to facilitate rapid access to HIV medicine
- **Integrating** HIV, STI, and hepatitis treatment to provide efficient and cost-effective care

PREVENT

new HIV transmissions by using proven interventions, including pre-exposure prophylaxis (PrEP)

PrEP

PrEP is a medicine that people at risk for HIV take to prevent getting HIV from sex or injection drug use.

Texas's CDC-funded HIV testing programs identified **19,665 persons who were eligible** for PrEP in 2022.

How CDC Dollars Are Improving Prevention

- **Expanding** access to PrEP through innovations such as long-acting injectable PrEP, Post-Exposure Prophylaxis, and focused provider education
- **Implementing** a whole-person approach to HIV prevention and care to help overcome barriers

RESPOND early to potential HIV clusters or outbreaks

Cutting-edge public health approaches turn HIV data into action by **identifying areas with rapid transmission and expanding resources** to maximize prevention and treatment efforts.

404

clusters of HIV infections reported to CDC from 2022 through 2024.

How CDC Dollars Are Improving Response

- **Addressing** gaps in prevention and care contributing to rapid transmission
- **Engaging** communities and partners to respond to outbreaks
