

**User's Guide Appendix 3a:**  
**2017-2019 National Survey of Family Growth**  
**Female Respondent File Recode Specifications**

*Table of Contents*

<b><u>Section A Recodes:</u></b> .....	5
Age, formal and informal marital status (AGER, FMARITAL, RMARITAL) .....	5
Number of years of schooling and highest degree received (EDUCAT, HIEDUC) .....	6
Race and Hispanic origin (HISPANIC, RACE, HISPRACE2).....	8
Number of children and other family members in household (NUMKDHH, NUMFMHH, HHFAMTYP, HHPARTYP, NCHILDHH, HHKIDTYP, CSPBBHH, CSPBSHH, CSPOKDHH) .....	10
Intact status of childhood living arrangement, living arrangement at 14 (INTCTFAM, PARAGE14).....	15
Mother's education and age at first birth (EDUCMOM, AGEMOMB1).....	16
 <b><u>Section B Recodes:</u></b> .....	 19
Whether currently pregnant (RCURPREG) .....	19
Total number of pregnancies and number of pregnancies by type of outcome (PREGNUM, COMPREG, LOSSNUM, ABORTION, LBPREGS) .....	19
Number of live births and number of births in last 5 years (PARITY, BIRTHS5) .....	23
Pregnancy recodes (from pregnancy file; arrays here for user convenience)	
Outcome, ending year, and age at outcome (OUTCOMnn, DATENDnn, AGEPRGnn).....	24
Year and age of conception (DATCONnn, AGECONnn) .....	25
Formal and informal marital status at outcome and at conception (MAROUTnn, RMAROUTnn, MARCONnn, RMARCONnn).....	26
Number of children born out of wedlock and in cohabiting unions (CEBOW, CEBOWC) .....	29
First live birth (year and R's age) (DATBABY1, AGEBABY1).....	29
 <b><u>Section C Recodes:</u></b> .....	 31
Number of formal marriages (FMARNO).....	31
Number of biological children R has had with her current spouse or cohabiting partner (CSPBIOKD) .....	31
Marriage start and ending years, and mode of dissolution (MARDATnn, MARDISnn, MARENDnn) .....	32
First marriage	
Age at 1 <sup>st</sup> marriage and age at dissolution of 1 <sup>st</sup> marriage (FMAR1AGE, AGEDISS1).....	34
Age at end of 1 <sup>st</sup> marriage (due to divorce or death (AGEED1).....	34
Months between 1 <sup>st</sup> marriage and dissolution of 1 <sup>st</sup> marriage (MAR1DISS) .....	35
Months between end of 1 <sup>st</sup> marriage (due to divorce or death) and remarriage (DD1REMAR) .....	36
Months between 1 <sup>st</sup> marriage and 1 <sup>st</sup> birth and 1 <sup>st</sup> conception (MAR1BIR1, MAR1CON1) .....	37
Months between 1 <sup>st</sup> conception and 1 <sup>st</sup> marriage (CONIMAR1).....	39
Whether 1 <sup>st</sup> birth was premarital (B1PREMAR) .....	40

Whether ever cohabited outside of marriage and whether ever married or cohabited (COHEVER, EVMARCOH).....	40
Cohabitation	
Number of cohabiting partners (PMARRNO, NONMARR, TIMESCOH).....	41
Year of 1 <sup>st</sup> cohabitation (COHAB1).....	43
Timing of 1 <sup>st</sup> cohabitation relative to 1 <sup>st</sup> marriage (COHSTAT) .....	43
Outcome and duration of 1 <sup>st</sup> cohabitation (COHOUT, COH1DUR).....	44
Ever had sexual intercourse and ever had sexual intercourse after menarche (HADSEX, SEXEVER).....	46
Age and date of 1 <sup>st</sup> sexual intercourse (ever and after menarche) (VRY1STAG, SEX1AGE, VRY1STSX, DATESEX1) .....	48
Whether had sex only once (SEXONCE).....	51
Number of months between first and last/most recent sexual intercourse with first partner ever (FPDUR) .....	51
Months between first intercourse (ever and after menarche) and first marriage (SEXMAR, SEX1FOR).....	51
Months between first intercourse (even if before first menstrual period) and first coresidential union (or interview) (SEXUNION) .....	54
Outcome of first sexual intercourse (SEXOUT).....	55
Relationship at first sexual intercourse with (most recent / second-to-last / third-to-last) sexual partner (in the past 12 months) (RELATP1-RELATP3) .....	56
Number of months between first and most recent sexual intercourse with (most recent or last ever/ second-to-last / third-to-last) sexual partner (in the past 12 months) (PARTDUR1-PARTDUR3) .....	57
Date and age at most recent sexual intercourse (LSEXDATE, LSEXRAGE).....	59
Number of opposite-sex sexual partners (in last 12 months, in lifetime) (PARTS1YR, LIFEPRNTR).....	60
Number of male partners in past 3 months (NUMP3MOS) .....	62
Had sexual intercourse in last 3 months (last sex date) (SEX3MO) .....	63
<b><u>Sections D &amp; E Recodes:</u></b> .....	64
Type of sterilization operation in effect at time of interview (STRLOPER) .....	64
Fecundity and infertility status (FECUND, INFERT).....	66
Ever used any method for any reason (ANYMTHD).....	73
Number of months of non-intercourse in last 12 months (NOSEX12).....	73
Whether sexual intercourse in last 3 months (non-intercourse series) (SEXP3MO).....	74
Current contraceptive status (CONSTAT1-CONSTAT4).....	75
Ever used the pill (PILLR) .....	80
Ever used a condom (CONDOMR).....	80
Method used at first intercourse (SEX1MTHD1-SEX1MTHD4).....	82
Whether used any method at last intercourse in past 12 months, specific method in past 12 months(MTHUSE12, METH12M1-METH12M4) .....	83
Whether used any method at last sex in the past 3 months, specific method in past 3 months (MTHUSE3, METH3M1-METH3M4).....	85
First method ever used and date used 1 <sup>st</sup> method (FMETHOD1-FMETHOD4, DATEUSE1) .....	88
Wantedness of each pregnancy (from pregnancy file; arrays here for user convenience)	

Wantedness of pregnancy of respondent & respondent’s partner (cycle 4 version) (OLDWPnn, OLDWRnn).....	90
Wantedness of pregnancy of respondent & respondent’s partner (cycle 6 version) (WANTRPnn, WANTPnn).....	91
Wantedness of pregnancy of respondent, same as WANTRPnn but with detail in “too soon/mistimed” (NWWANTRPnn) .....	92
Number of wanted pregnancies in the last 5 years (WANTP5).....	92
<b><u>Section F Recodes:</u></b> .....	94
Type of clinic used for services in last 12 months (FPTIT12, FPTITMED).....	94
Source of services received in the last 12 months (FPTITSTE, FPTITBC, FPTITCHK, FPTITCBC, FPTITCST, FPTITEC, FPTITCEC, FPTITPRE, FPTITABO, FPTITPAP, FPTITPEL, FPTITPRN, FPTITPR, FPTITSTD) .....	95
Whether clinic used in last 12 months is regular place for medical care (FPREGFP, FPREGMED).....	114
<b><u>Section G Recodes:</u></b> .....	117
Intentions for additional births (INTENT).....	117
Central number of additional births expected (ADDEXP).....	118
<b><u>Section H Recodes:</u></b> .....	120
Any medical help to become pregnant and any medical help to prevent miscarriage (ANYPRGHP, ANYMSCHP) .....	120
Ever used infertility services (INFEVER).....	120
Whether received specific infertility services: .....	121
drugs to improve ovulation (OVULATE), surgery to correct blocked tubes (TUBES), infertility testing (R or H/P) (INFERTR, INFERTH), advice (ADVICE), artificial insemination (INSEM), in vitro fertilization (INVITRO), surgery/treatment for endometriosis (ENDOMET), surgery for uterine fibroids (FIBROIDS)	
Ever been treated for PID (PIDTREAT) .....	126
Ever had an HIV test (EVHIVTST) .....	126
Source of HIV test received in last 12 months (FPTITHIV).....	127
<b><u>Section I Recodes:</u></b> .....	129
Current health insurance coverage status (CURR_INS).....	129
Current metropolitan residence (METRO).....	130
Current religious affiliation (RELIGION).....	130
Current labor force status (LABORFOR).....	131
<b><u>Section J Recodes:</u></b> .....	133
Poverty level of household income (POVERTY).....	133
Total household income (TOTINCR) .....	134
Whether received public assistance in last year (PUBASSIS).....	135

**All recodes were computed using original values of century month (CM) dates where date recodes are referenced and original values of continuous recodes that were modified for public use.**

The CAPI Reference Questionnaire (CRQ) contains the full specifications for the computer- assisted survey instrument, including all CRQ flow checks (routing statements) referenced below.

For selected recodes on the female respondent file, some form of collapsing, topcoding, or bottomcoding values was required to minimize the risk of disclosure and include the variables on the public use files. For these particular recodes, information on the original, “in-house” variables (beginning with the prefix “IN”) are listed in the specifications below. In addition, for reasons of disclosure risk, some CM date recodes have been suppressed for public use and only the years of these events are included on the public-use files. To access these restricted-use variables (all listed in **Appendix 7a** and further described in **Appendix 7c**), users must apply to the NCHS Research Data Center. In addition to the information in Appendix 7, please see **“Protections to Minimize Risk of Disclosure for Individual-Level Data”** in the User’s Guide main text.

\*\* A double asterisk after the recode name indicates there was a comparable recode of the same name in the 2015-2017 NSFG. It also means that if any disclosure-risk related modification of the recode occurred for the 2015-2017 NSFG public-use files, the same action was taken for the 2017-2019 NSFG public-use files. Please consult User’s Guide Appendix 4, presenting “cross-walk” spreadsheets of the NSFG recodes for information on recode comparability across survey years as well as between male and female files. Please also consult Appendix 7, which describes all analytic, restricted-use variables, for further information on variable modifications or suppressions implemented on the public-use files for reasons of disclosure risk.

## A double hashtag after the recode name indicates that some new modification occurred for reasons of disclosure risk reduction, in order to retain the recode on the 2017-2019 NSFG public-use files. This comparability information is also indicated in User’s Guide Appendix 4b, the recode “crosswalk” for the female respondent and pregnancy files and Appendix 7, as described above.

**Section A:**

**Demographic Characteristics: Household Roster: Childhood Background**

**AGER\*\*:**      **“R’s age at interview”**

AGER= **age\_r**

Values of Blaise-computed variable **age\_r** are used to determine values of AGER:

If there was a valid response in date of birth (AA-2 BIRTHDAY), then  
age\_r = INT[(date of interview (in m/d/y) - m/d/y date of birth (AA-2 BIRTHDAY))/365.25]  
else

age\_r = age in years (AA-1 AGE\_A)

*Note: Respondents aged 50 at interview were 49 at time of household screener.*

Code categories:

15-50 = age in years

**FMARITAL\*\*:**      **“Formal (legal) marital status”**

*Note: This recode defines formal (legal) marital status based only on opposite-sex couples.*

FMARITAL= **fmarit**

Values of Blaise-computed variable **fmarit** are used to determine values of FMARITAL:

fmarit = 1 (married)	If R is married (AD-7b MARSTAT = 1)
fmarit = 2 (widowed)	If R is widowed (AD-7b MARSTAT = 3 or AD-7c FMARSTAT=3)
fmarit = 3 (divorced)	If R is divorced (AD-7b MARSTAT = 4 or AD-7c FMARSTAT=4)
fmarit = 4 (separated)	If R is separated (AD-7b MARSTAT = 5 or AD-7c FMARSTAT=5)
fmarit = 5 (never married)	If R is never married (AD-7b MARSTAT = 6 or AD-7c FMARSTAT=6)
fmarit=0 (missing)	If R is missing or DK/RF on either AD-7b MARSTAT or AD-7c FMARSTAT

*Imputation note: Imputed if fmarit=0 (response to AD-7b MARSTAT was DK/RF or is missing or AD-7c FMARSTAT was DK/RF). In instrument, cases with fmarit=0 were routed as “never married” – thus if FMARIT=0, FMARITAL is logically imputed to =5.*

Code categories:

1 = Married to a person of the opposite sex  
2 = Widowed  
3 = Divorced or annulled  
4 = Separated  
5 = Never married

**RMARITAL\*\*:** “Informal marital status”

*Note: This recode defines informal marital status based only on opposite-sex couples.*

RMARITAL = 1 if R is married to a person of the opposite sex (AD-7b MARSTAT = 1).  
Else  
RMARITAL = 2 if R is living with a partner of the opposite sex (AD-7b MARSTAT = 2).  
Else  
RMARITAL = 3 if R is widowed (AD-7b MARSTAT = 3).  
Else  
RMARITAL = 4 if R is divorced (AD-7b MARSTAT = 4).  
Else  
RMARITAL = 5 if R is separated (AD-7b MARSTAT = 5).  
Else  
RMARITAL = 6 if R has never been married (AD-7b MARSTAT = 6).

*Imputation Note: In instrument cases with AD-7b MARSTAT = DK/RF/missing were routed as never married thus RMARITAL is imputed to = 6 (never married).*

Code categories:

- 1 = Currently married to a person of the opposite sex
- 2 = Not married but living with a partner of the opposite sex
- 3 = Widowed
- 4 = Divorced or annulled
- 5 = Separated (for reasons of marital discord)
- 6 = Never been married

**EDUCAT\*\*:** “Education (number of years of schooling)”

- If R completed the highest grade she attended (AF-4 COMPGRD = 1), then her education is the highest grade she attended (EDUCAT = AF-3 HIGRADE).
- If R did not complete (or has not yet completed) the highest grade she attended (AF-4 COMPGRD = 5), her education is the grade below the highest grade she attended (EDUCAT = AF-3 HIGRADE minus 1).
- If R had no formal schooling (AF-3 HIGRADE = 0), then she completed no years of formal schooling (EDUCAT = 0).
- If R reported the highest grade she attended (AF-3 HIGRADE = 1-19), but did not report whether or not she had completed that grade (AF-4 COMPGRD = DK, RF, missing), then her education is the highest grade she attended (EDUCAT = AF-3 HIGRADE).

*Note: The original EDUCAT recode, as defined above, was bottom-coded for public use at 9 to represent “9<sup>th</sup> grade or less.” The full-detail variable called INEDUCAT is available through the NCHS Research Data Center.*

*Imputation Note:* Imputed if AF-3 HIGRADE is DK/RF/missing.

Code categories for EDUCAT (public-use variable):

- 9 = 9<sup>th</sup> grade or less
- 10-12 = 10<sup>th</sup> – 12<sup>th</sup> grade
- 13-18 = 1-6 years of college/grad school
- 19 = 7 or more years of college and/or grad school

Code categories for INEDUCAT (restricted-use variable):

- 0-9 = No formal schooling - 9<sup>th</sup> grade
- 10-12 = 10<sup>th</sup> – 12<sup>th</sup> grade
- 13-18 = 1-6 years of college/grad school
- 19 = 7 or more years of college and/or grad school

**HIEDUC\*\*:** “Highest completed year of school or highest degree received”

- If R has no degrees ((AF-6 DIPGED=5, or BLANK) and (AF-10 HAVEDEG=5 or BLANK)), then HIEDUC=1-8, or 10. Assign based on completed years of schooling (recode EDUCAT) value corresponding to the appropriate HIEDUC category.
- If R has no college or university degrees (AF-10 HAVEDEG=5 or BLANK), and if R has a high school diploma and/or general equivalency diploma (GED) (AF-6 DIPGED=1 or 2 or 3), and if completed years of school is 12 or fewer (EDUCAT<=12), then HIEDUC=9
- If R has no college or university degrees (AF-10 HAVEDEG=5 or BLANK), and if R has a high school diploma and/or GED (AF-6 DIPGED=1 or 2 or 3), and if completed years of school is more than 12 (EDUCAT>12), then HIEDUC=10
- Else, if R has an associate’s degree (AF-11 DEGREES=1), then HIEDUC=11  
if R has a bachelor’s degree (AF-11 DEGREES=2), then HIEDUC=12  
if R has a master’s degree (AF-11 DEGREES=3), then HIEDUC=13  
if R has a doctorate degree (AF-11 DEGREES=4), then HIEDUC=14  
if R has a professional degree (AF-11 DEGREES=5) then HIEDUC=15

*Note:* The original HIEDUC recode, as defined above, was bottom-coded for public use at 5 to represent “9<sup>th</sup> grade or less.” The full-detail variable called INHIEDUC is available through the NCHS Research Data Center.

*Imputation Note:* This recode is computed using imputed values for EDUCAT, but some cases require imputation – those with AF-11 DEGREES= DK/RF/missing or AF-6 DIPGED= DK/RF/missing.

Code categories for HIEDUC (public-use variable):

- 5 = 9th grade or less
- 6 = 10th grade
- 7 = 11th grade
- 8 = 12th grade, no diploma (nor GED)
- 9 = High school graduate (high school diploma or GED)
- 10 = Some college but no degree
- 11 = Associate degree in college/university
- 12 = Bachelor's degree
- 13 = Master's degree
- 14 = Doctorate degree
- 15 = Professional degree

Code categories for INHIEDUC (restricted-use variable):

- 1 = No formal schooling
- 2 = 1st-4th grade
- 3 = 5th-6th grade
- 4 = 7th-8th grade
- 5 = 9th grade
- 6 = 10th grade
- 7 = 11th grade
- 8 = 12th grade, no diploma (nor GED)
- 9 = High school graduate (high school diploma or GED)
- 10 = Some college but no degree
- 11 = Associate degree in college/university
- 12 = Bachelor's degree
- 13 = Master's degree
- 14 = Doctorate degree
- 15 = Professional degree

**HISPANIC\*\*:**            **“Hispanic origin”**

IF AC-1 HISP =1 then HISPANIC=1.  
ELSE IF HISP=5 THEN HISPANIC=2.

*Imputation Note:*        *Information from the screener interview was used to impute a value on HISPANIC, when needed.*

Code categories:

- 1 = Hispanic
- 2 = Non-Hispanic

**RACE\*\*:**      **“Race of respondent”**

If R reported only one race (AC-3 RRACE\_01 = 1 to 14) and reported that:

- She is black (AC-3 RRACE\_01= 2), then RACE=1.
- She is white (AC-3 RRACE\_01= 1), then RACE=2.
- She is some other race (AC-3 RRACE\_01 = 3 to 14), then RACE=3.

If R reported more than one race (more than one non-missing value on AC-3 RRACE\_01 through RRACE\_14), and reported that the race that best describes her is:

- Black (AC-4 RACEBEST\_=2), then RACE=1.
- White (AC-4 RACEBEST\_=1), then RACE=2.
- Some other race (AC-4 RACEBEST\_=3 to 14), then RACE=3.

If R did not report her race (AC-3 RRACE\_01 = RF/DK), or she reported more than one race but did not choose which race best describes her (AC-4 RACEBEST\_=RF/DK), then RACE= race by interviewer observation (AC-5 OBSERVE) coded as follows:

- Interviewer chose black (AC-5 OBSERVE=1), then RACE=1.
- Interviewer chose white (AC-5 OBSERVE=2), then RACE=2.
- Interviewer chose other (AC-5 OBSERVE=7), then RACE=3.

*Imputation Note:*      *Needed if AC-5 OBSERVE = DK or RF.*

Code categories:

- 1 = Black
- 2 = White
- 3 = Other

**HISPRACE2\*\*:**      **“Race and Hispanic origin – based on 1997 OMB guidelines”**

Define restricted-use *intermediate variable* NUMRACE for multiple race reporting:

- NUMRACE=1 if AC-4 RACEBEST\_=blank (not asked because R reported only 1 race)
- NUMRACE=2 if RACEBEST\_ NE blank (more than 1 race reported)

If NUMRACE=1 or HISPRACE=1 (Hispanic) then HISPRACE2=HISPRACE.  
Else if NUMRACE=2 then HISPRACE2=4.

*Imputation Note:*      *Computed based on imputed values of source recodes. Information from the screener interview was used to impute a value on HISPRACE2, when needed.*

Code categories:

- 1 = Hispanic (regardless of race reporting)
- 2 = Non-Hispanic White, Single Race
- 3 = Non-Hispanic Black, Single Race
- 4 = Non-Hispanic Other or Multiple Race

**NUMKDHH\*\*:**        **“Number of biological/adopted/related/legal children under age 18 in household”**

NUMKDHH is initialized to 0.

For each member of the household, NUMKDHH is increased by one each time a household member’s relationship to R is biological child, adopted child, step child, partner’s child, grandchild, niece/nephew, legal ward, or foster child (AD-5 RELAR[x]=3 or 4 or 5 or 6 or 7 or 8 or 9 or 10) and age is less than 18 (AD-4 Age[x]<18) and it is the household member’s usual residence (AD-2 USUALRES[x] = 1).

*Note: This is comparable to recode of the same name on the data file for males, which is intended to define the universe of children in the household for whom he may play a fathering role, and about whom “parenting activities” questions are asked. This differs from the Cycle 5 recode NUMKDHH which captured only biological and adopted children in the household.*

*Note: The original NUMKDHH recode, as defined above, was top-coded for public use at 4 to represent “4 children or more.” The full-detail variable called INNUMKDHH is available through the NCHS Research Data Center.*

*Imputation Note: No imputation needed because NUMKDHH is initialized to 0.*

Code categories:

- 0-3     = number of children
- 4       = 4 children or more

**NUMFMHH\*\*:**        **“Number of family members in household”**

NUMFMHH is initialized to 0.

For each member of the household, NUMFMHH is increased by one each time a household member’s relationship to R is husband/wife, male/female partner, biological child, step-child, adopted child, grandchild, niece/nephew, biological parent, step- parent, adoptive parent, grandparent, aunt/uncle, brother/sister, other relative, (AD-5 RELAR[x] = 1, 2, 3, 4, 5, 9, 10, 11, 12, 13, 17, 18, 19, 20) and it is the household member’s usual residence (AD-2 USUALRES[x] = 1).

*Note: The original NUMFMHH recode, as defined above, was top-coded for public use at 7 to represent “7 family members or more.” The full-detail variable called INNUMFMHH is available through the NCHS Research Data Center.*

*Imputation Note: No imputation needed because NUMFMHH is initialized to 0.*

Code categories:

- 0-6     = number of family members
- 7       = 7 or more family members

**HHFAMTYP\*\*:**        **“Type of household/family structure”**

This variable provides a summary measure of household/family structure at the time of interview.

If there is no spouse in the household (no AD-5 RELAR[x] = 1) and there is no partner in the household (no AD-5 RELAR[x] = 2) and no household members are “child under age 19” (child includes biological child, stepchild, adopted child, legal ward, foster child, or partner’s child) (no AD-5 RELAR[x] = 3 through 8, with AD-4 AGE[x] less than 19)

Then HHFAMTYP=1

else, if

There is a spouse or partner in the household (AD-5 RELAR[x]=1 or 2) but no children under age 19 in the household, (no AD-5 RELAR[x] = 3 through 8, with AD-4 AGE[x] less than 19),

then HHFAMTYP=2

else, if

There is a spouse in the household (AD-5 RELAR[x]=1) and one or more children under age 19 in the household, (any AD-5 RELAR[x] = 3 through 8, with AD-4 AGE[x] less than 19),

then HHFAMTYP=3

else, if

There is a partner in the household (AD-5 RELAR[x]=2) and one or more children under age 19 in the household, (any AD-5 RELAR[x] = 3 through 8, with AD-4 AGE[x] less than 19),

then HHFAMTYP=4

else,

HHFAMTYP=5

*Imputation Note:*        *No imputation needed because HHFAMTYP defaults to 5.*

Code categories:

1=No spouse/partner and no child(ren) (of R) 18 or younger

2=Spouse/partner, but no child(ren) (of R) 18 or younger

3=Spouse and R’s child(ren) 18 or younger

4=Cohabiting partner and R’s child(ren) 18 or younger

5=No spouse/partner, but child(ren) of R, 18 or younger

**HHPARTYP\*\*:**        **“Type of parental situation in household”**

This variable provides a summary measure of the respondent’s parental living situation at the time of interview.

- if there are two biological parents in the household (AD-5 RELAR[x]=11 for 2 household members) or two adoptive parents in the household (AD-5 RELAR[x]=13 for 2 household members), then HHPARTYP=1

- else if there is a biological parent in the household, along with a step or adoptive parent (any AD-5 RELAR[x]=11, and any AD-5 RELAR[x]=12 or 13), then HHPARTYP=2
- else if there is only one biological, adoptive, or stepparent in the household, then HHPARTYP=3
- else, HHPARTYP=4

*Imputation note:* No imputation needed because HHPARTYP defaults to 4.

Code categories:

- 1=Both biological or both adoptive parents
- 2=Biological and step- or adoptive parent
- 3=Single parent (biological, adoptive, or stepparent)
- 4=Other

**NCHILDHH\*\*:** “Number of respondent’s children (18 or younger) living in household”

This variable provides a counter of all persons in the household 18 or younger who can be considered the respondent’s child. This includes biological child, stepchild, adopted child, legal ward, foster child, or partner’s child.

NCHILDHH is initialized to 0.

For each member of the household who is respondent’s child under age 19, NCHILDHH is incremented by one. (for each time AD-5 RELAR[x] = 3 through 8, with AD-4 AGE[x] less than 19, NCHILDHH=NCHILDHH+1).

If NCHILDHH is greater than or equal to 3, NCHILDHH=3.

*Imputation Note:* No imputation needed because NCHILDHH is initialized to 0.

Code categories:

- 0-2 = number of respondent’s children 18 or younger in the household
- 3 = 3 or more of respondent’s children 18 or younger in the household

**HHKIDTYP\*\*:** “Whether R has children (18 or younger), and whether bio/non-bio, living in household”

This variable provides a summary description of persons 18 or younger living in the household, based on their relationship to the respondent and their age.

If

There are no biological children age 18 or under in the household (no AD-1 RELAR[x]=3, with AD-4 AGE[x]<19) and there are no non-biological children age 18 or under in the household (no

AD-1 RELAR[x]=4 through 8, with AD-4 AGE[x]<19)  
(note: there could be biological or non-biological children 19 or older in the household)  
Then HHKIDTYP=0

Else, if  
There are no non-biological children of any age in the household (no AD-1 RELAR[x]=4 through 8), then if there are any biological children age 18 or under in the household (any AD-1 RELAR[x]=3, with AD-4 AGE[x]<19)  
Then HHKIDTYP=1

Else, if  
There are any non-biological children age 18 or under in the household (any AD-1 RELAR[x]=4 through 8, with AD-4 AGE[x]<19)  
Then HHKIDTYP=2

*Imputation note: No imputation needed because HHKIDTYP defaults to 0.*

Code categories:

- 0 = no child(ren) 18 or younger in HH or only older child(ren)
- 1 = at least one biological child (of R's) under 18 in HH, no nonbiological child(ren)
- 2 = any non-biological child (of R's) 18 or younger in HH

**CSPBBHH\*\*:**        **“Number of R’s biological children (aged 18 or younger) with current husband or cohabiting partner who live in the household”**

CSPBBHH is blank (inapplicable) if R is not currently married or cohabiting with a male partner (AD-7b MARSTAT NE 1 or 2).

This variable indicates the number of the married or cohabiting female respondent’s biological children who are also the biological children of her current husband or cohabiting partner, are 18 or younger, and who live in the household.

For each member of the household 18 years of age or younger (AD-4 AGE[x] <= 18), CSPBBHH is increased by one each time a household member’s relationship to the R is biological child (AD- 5 RELAR[x] = 3 and her husband or partner is the biological father of this child (AD-9 RELMAN = 1).

*Note: The original CSPBBHH recode, as defined above, was top-coded for public use at 3 to represent “3 or more joint biological children.” The full-detail variable called INCSPBBHH is available through the NCHS Research Data Center.*

*Imputation Note:*        *No imputation needed because CSPBBHH is initialized to 0 for applicable respondents.*

Code categories:

- Blank = inapplicable
- 0-2 = number of joint biological children 18 or younger in household
- 3 = 3 or more joint biological children 18 or younger in household

**CSPBSSH\*\*:**        **“Number of female R’s biological children (aged 18 or younger) in household who are not the biological children of her current husband or cohabiting partner”**

CSPBSSH is blank (inapplicable) if R is not currently married or cohabiting with a male partner (AD-7b MARSTAT NE 1 or 2).

This variable indicates the number of the married or cohabiting female respondent’s biological children who are related to, but not the biological children of, her current husband or cohabiting partner.

For each member of the household 18 years of age or younger (AD-4 AGE[x] <= 18), CSPBSSH is increased by one each time a household member’s relationship to the R is biological child (AD-5 RELAR[x] = 3 and her husband or partner is related to, but NOT the biological father, foster father, or legal guardian of this household member (AD-9 RELMAN = 2, 3, or 4).

*Note: The original CSPBSSH recode, as defined above, was top-coded for public use at 1 to represent “1 child or more.” The full-detail variable called INCSPBSSH is available through the NCHS Research Data Center.*

*Imputation Note: No imputation needed because CSPBSSH is initialized to 0 for applicable respondents.*

Code categories:

- Blank = inapplicable
- 0 = No children under 19 in household
- 1 = 1 or more children under 19 in household

**CSPOKDHH\*\*:**        **“Number of all other children (aged 18 or younger) in household living with R and her current husband or cohabiting partner”**

CSPOKDHH is blank (inapplicable) if R is not currently married or cohabiting with a male partner (AD-7b MARSTAT NE 1 or 2).

This variable indicates the number of children in the married or cohabiting female’s household who are:

- 1) her biological children and the relationship of the child to her current husband or cohabiting partner is unknown or not related, OR
- 2) her step, adopted, partner’s, or foster child, or legal ward.

For each member of the household 18 years of age or younger (AD-4 AGE[x] <= 18), CSPOKDHH is increased by one each time a household member's relationship to the R is:

- 1) her biological child (AD-5 RELAR[x] = 3) and the relationship of the current husband or partner to the child is missing or not related (legally or by blood (AD-9 RELMAN = . (system-missing), 5, or 6) OR
- 2) her step, adopted, partner's, or foster child, or legal ward, (AD-5 RELAR[x] = 4, 5, 6, 7, or 8) regardless of the relationship of her current husband or partner to the child.

*User note: The original CSPOKDHH recode, as defined above, was top-coded for public use at 1 to represent "1 child or more." The full-detail variable called INCSPOKDHH is available through the NCHS Research Data Center.*

*Imputation Note: No imputation needed because CSPOKDHH is initialized to 0 for applicable respondents.*

Code categories:

- Blank = inapplicable
- 0 = No children under 19 in household
- 1 = 1 or more children under 19 in household

**INTCTFAM\*\*:**        **"Intact status of childhood family"**

**INTCTFAM=intact18**

Values of Blaise-computed variable **intact18** are used to determine values of INTCTFAM:

intact18 = 1 (yes)     if R always lived with both biological/adoptive parents from birth until age 18 or until interview or until lived on own (for Rs under 18 who have lived on own) (AG-1 INTACT=1)

intact18 = 2 (no)     --     if R did not always live with both biological/adoptive parents from birth until time specified above (AG-1 INTACT=5) or  
                          --     if R is less than 18 (AGE\_R<18) and doesn't currently live with both biological/adoptive parents (computed variable **wthparnw=2**) and has never lived away from parents/guardians (computed variable **onown18** NE 1).

*Imputation note: Imputation only needed when intact18 is missing.*

Code categories:

- 1 = two biological or adoptive parents from birth
- 2 = anything other than 2 biological or adoptive parents from birth

**PARAGE14\*\*:**           **“Parental living situation at age 14”**

PARAGE14=1            If R always lived with both biological or adoptive parents-from birth until age 18/interview/living on own (computed variable intact18=1).

OR

If R lived with both biological or two adoptive parents at age 14 (AG-3 LVSIT14F=2 and AG-4 LVSIT14M=2) or (AG-3 LVSIT14F=4 AND AG-4 LVSIT14M=4)

Else

PARAGE14=2            If R lived with biological mother and step-father at age 14 (AG-3 LVSIT14F=2 and AG-4 LVSIT14M=3).

Else

PARAGE14=3            If R lived in any other parental situation at age 14, including: one biological parent and no other parents(s)/parent-figures; or no parent(s)/parent-figures.

*User note:        This recode PARAGE14 is based on original, full-detail versions inputs INLVSIT14F and INLVSIT14M. The PUF versions of these inputs had categories combined for reduction of disclosure risk. The full-detail variables, INLVSIT14F and INLVSIT14M, are available through the NCHS Research Center. The full-detail recode called INPARAGE14 is also available through the NCHS Research Center.*

*Imputation note:        Imputed when intact18 ne 1 and LVSIT14F and/or LVSIT14M are missing.*

Code categories for PARAGE14 categories (public-use variable):

- 1= R lived with both biological or adoptive parents at age 14
- 2= R lived with biological mother and step-father at age 14
- 3= R lived in any other parental situation or a non-parental situation at age 14

Code categories for INPARAGE14 categories (restricted-use variable):

- 1=R lived with both biological or adoptive parents at age 14
- 2=R lived with one biological parent and one adoptive parent at age 14
- 3=R lived with one biological and one step-parent at age 14
- 4=R lived with one biological parent and no other parent/parent-figure at age 14
- 5=R lived with other parent(s)/parent-figure(s) or in non-parental situation at age 14

**EDUCMOM\*\*:**           **“Mother’s (or mother-figure’s) education”**

EDUCMOM = Highest level of education completed by mother or mother-figure (AG-6 MOMDEGRE).

EDUCMOM=95            If R was asked who she thought of as the woman who mostly raised her when she was a teenager, and identified no one, (AG-5 WOMRASDU = 9,

98,99), (no mother-figure identified or refused or don't know response to AF-5 WOMRASDU).

*Note: MOMDEGRE is based on a question asking about the education of the mother/mother figure whose identity is defined in the following way: For respondents who grew up in intact family (biological/adoptive mother and father) (AG-1 INTACT), that is who is being asked about. For all other respondents, the identity is established with the question (AG-5 WOMRASDU)*

*“Who, if anyone, do you think of as the woman who mostly raised you when you were growing up?”*

*Respondents eligible for that question could respond “no such person,” coded 95 on EDUCMOM.*

*Note: The original EDUCMOM recode, as defined above, was collapsed into 4 categories for public use so that 3 represents “Some college, including 2-year degrees” and 4 represents “Bachelor’s degree or higher.” The full-detail variable called INEDUCMOM is available through the NCHS Research Data Center.*

*Imputation note: Imputation only needed when MOMDEGRE is missing for respondents who have a mother or mother figure.*

Code categories for EDUCMOM (public-use variable):

- 1 = Less than high school
- 2 = High school graduate or GED
- 3 = Some college, including 2-year degrees
- 4 = Bachelor’s degree or higher
- 95 = No mother/mother-figure identified

Code categories for INEDUCMOM (restricted-use variable):

- 1 = Less than high school
- 2 = High school graduate or GED
- 3 = Some college but no degree
- 4 = 2-year college degree (e.g., Associates degree)
- 5 = 4-year college graduate (e.g., BA, BS)
- 6 = graduate or professional school
- 95 = No mother/mother-figure identified

**AGEMOMB1\*\*:** “Age of mother (or mother-figure) at first birth”

If R reported a valid age for her mother at first birth (1 LE AG-9 MOMFSTCH LE 5), then AGEMOMB1=AG-9 MOMFSTCH.

Else if R doesn't know or refused to answer mother's age at first live birth (AG-9 MOMFSTCH=DK/RF) then do:

If she estimates she was under 18 (AG-10 MOM18=1) then AGEMOMB1=91.  
Else if she estimates she was aged 18-19 (AG-10 MOM18=2) then AGEMOMB1=92.  
Else if she estimates she was aged 20-24 (AG-10 MOM18=3) then AGEMOMB1=93.  
Else if she estimates she was aged 25 or older (AG-10 MOM18=4) then AGEMOMB1=94.

Else if R did not identify a mother or mother-figure (AG-5 WOMRASDU =9,98,99) then AGEMOMB1=95.

Else if R's mother figure had no children (AG-9 MOMFSTCH=96) then AGEMOMB1=96.

*User note:* AGEMOMB1 is based on a question asking about the age at first birth of the mother/mother figure whose identity is defined in the following way: For respondents who grew up in intact family (biological/adoptive mother and father) (AG-1 INTACT), that is who is being asked about. For all other respondents, the identity is established with the question (AG-5 WOMRASDU)

*“Who, if anyone, do you think of as the woman who mostly raised you when you were growing up?”*

*AGEMOMB1 is coded 96 if R's mother or mother-figure had no biological children (e.g., she only had adopted children).*

*User note:* The original AGEMOMB1 recode, as defined above, was collapsed for public use into 5 categories. The full-detail variable called INAGEMOMB1 is available through the NCHS Research Data Center.

*Imputation note:* Imputation only needed when MOMFSTCH is missing and MOM18 is missing for applicable for respondents.

Code categories for AGEMOMB1 (public-use variable):

- 1 = Less than 18 years
- 2 = 18-19 years
- 3 = 20-24 years
- 4 = 25-29 years
- 5 = 30 or older
- 95 = No mother or mother-figure
- 96 = Mother-figure had no children

Code categories for INAGEMOMB1 (restricted-use variable):

- xx-nn = Age in years at 1<sup>st</sup> biological child's birth
- 95 = No mother or mother-figure
- 96 = Mother-figure had no children

## Section B: Pregnancy and Birth History

**RCURPREG\*\*:**      “Whether R is currently pregnant”

RCURPREG = **currpreg**

Values of Blaise-computed variable **currpreg** (defined in Flow Check B-4) are used to determine values of RCURPREG:

currpreg = 1 (yes)                      if R reports that she is currently pregnant (BA-2 PREGNOWQ = 1) or that she thinks she is probably pregnant (BA-3 MAYBPREG = 1)

Else currpreg = 5 (no)                  in all other cases (including those where both PREGNOWQ and MAYBPREG = DK/RF)

SAS logic:

```
If currpreg =1 then RCURPREG=1;
Else if currpreg=5 then RCURPREG=2;
/* if currpreg is not missing, then assign RCURPREG=currpreg */
If PREGNOWQ in(8,9) and MAYBPREG in(.,8,9) then RCURPREG_I=2;
/* flag as logical imputation */
```

*Imputation Note:*      *All cases with PREGNOWQ=DK/RF and MAYBPREG=DK/RF are logically imputed to “no,” to mirror how they are routed in the instrument.*

Code categories:

1            = Yes (currently pregnant)  
2            = No (not currently pregnant)

**PREGNUM\*\*:**              “CAPI-based total number of pregnancies”

If R has not yet begun her menstrual periods (BA-1 MENARCHE=96), set PREGNUM=0, and flag as logical imputation.

Otherwise, PREGNUM is based on non-missing values of the Blaise-computed variable NPREGS\_S (defined in Flow Check B-40d), which accounts for any corrections that took place in the verification screens at the end of the pregnancy history.

SAS Logic:

```
If MENARCHE=96 then do;
PREGNUM=0;
PREGNUM_I=2;
End;
Else if 0 LE NPREGS_S LT 96 then PREGNUM=NPREGS_S;
Else if NPREGS_S in (.,98,99) then impute PREGNUM;
```

*Imputation Note:*        *Imputed if NPREGS\_S = system missing, DK or RF.*

Code categories:

00-nn = number of pregnancies

**COMPREG\*\*:**        **“CAPI-based number of completed pregnancies”**

If R is currently pregnant (recode RCURPREG = 1), the number of completed pregnancies is one less than the total number of pregnancies coded in recode PREGNUM. Otherwise, COMPREG EQ PREGNUM.

SAS Logic:

If RCURPREG = 1 then COMPREG = (PREGNUM - 1);  
Else if RCURPREG = 2 then COMPREG = PREGNUM;

*Imputation Note:*        *Computed based on imputed values of source recodes.*

Code categories:

00-nn = number of completed pregnancies

**LOSSNUM\*\*:**        **“CAPI-based number of completed pregnancies ending in spontaneous pregnancy loss”**

LOSSNUM is blank (inapplicable) if R has no completed pregnancies (recode COMPREG=0).

Otherwise, LOSSNUM indicates the total number of pregnancies R has had that ended in miscarriage, ectopic pregnancy, or stillbirth.

Each such pregnancy is counted regardless of any other outcomes reported for the pregnancy. For example, if a pregnancy ended in live birth and stillbirth, it is counted towards both LBPREGS and LOSSNUM recodes. As a result, COMPREG (the number of completed pregnancies may not equal the sum of LOSSNUM, ABORTION, and LBPREGS values.

The raw variable indicating pregnancy outcome is BC-1 PREGEND, and for each pregnancy, up to 6 outcomes are recorded. (No case in 2017-2019 NSFG reported more than 2 outcomes.) There is also a Blaise-computed variable **outcom\_s** that indicates whether pregnancy ended in live birth (code 1), ended in non- live birth (code 2), or is a current pregnancy (code 3). The outcom\_s variable reflects the pregnancy outcome after all corrections have been made in the pregnancy summary screens; only one main outcome is coded. If no corrections were needed to outcome or pregnancy order, then outcom\_s is equivalent to the originally computed variable **pregoutcome**.

SAS Logic:

(based on pregnancy-file data sorted by case ID number and chronologically)

```

if first.caseid and (outcom_s in(1,2) or OUTCOME in(1,2,3,4,5)) then LOSSNUM=0;
/* initialized to 0 only if 1st pregnancy is a completed pregnancy */
if PREGEND1 in(1,2,4) or PREGEND2 in(1,2,4) or OUTCOME in(3,4,5) then
LOSSNUM+1;
retain LOSSNUM;
if last.caseid then output LOSSNUM;

```

*Note: This is a respondent file recode, but it is constructed based on the pregnancy-file data.*

*Imputation Note: If outcom\_s = system-missing, for any of a respondent's pregnancies, this recode must be imputed. Imputed values of LOSSNUM are based on imputed values of the pregnancy file recode OUTCOME, in conjunction with any valid PREGEND1-2 values from pregnancy records where OUTCOME was not imputed.*

Code categories:

Blank = inapplicable  
00-nn = number of spontaneous losses

**ABORTION\*\*:**      **“CAPI-based number of completed pregnancies ending in induced abortion”**

ABORTION is blank (inapplicable) if R has no completed pregnancies (recode COMPREG=0).

Otherwise, ABORTION indicates the total number of pregnancies R has had that ended in induced abortion (as reported in Section B, not in Section J, Audio CASI).

Each such pregnancy is counted regardless of any other outcomes reported for the pregnancy. For example, if a pregnancy ended in live birth and stillbirth, it is counted towards both LBPREGS and LOSSNUM recodes. As a result, COMPREG (the number of completed pregnancies may not equal the sum of LOSSNUM, ABORTION, and LBPREGS values.

The raw variable indicating pregnancy outcome is BC-1 PREGEND, and for each pregnancy, up to 6 outcomes are recorded. (No case in 2017-2019 NSFG reported more than 2 outcomes.) There is also a Blaise-computed variable **outcom\_s** that indicates whether pregnancy ended in live birth (code 1), ended in non- live birth (code 2), or is a current pregnancy (code 3). The outcom\_s variable reflects the pregnancy outcome after all corrections have been made in the pregnancy summary screens; only one main outcome is coded. If no corrections were needed to outcome or pregnancy order, then outcom\_s is equivalent to the originally computed variable **prgoutcome**.

SAS Logic:

(based on pregnancy-file data sorted by case ID number and chronologically)

```

if first.caseid and outcom_s in(1,2) or OUTCOME in(1,2,3,4,5)) then ABORTION=0;
/* initialized to 0 only if 1st pregnancy is a completed pregnancy */
if PREGEND1=3 or PREGEND2=3 or OUTCOME=2 then ABORTION+1;

```

retain ABORTION;  
if last.caseid then output ABORTION;

*Note: This is a respondent file recode, but it is constructed based on the pregnancy-file data.*

*Imputation Note: If outcom\_s = system-missing, for any of a respondent's pregnancies, this recode must be imputed. Imputed values of ABORTION are based on imputed values of the pregnancy file recode OUTCOME, in conjunction with any valid PREGEND1-2 values from pregnancy records where OUTCOME was not imputed.*

Code categories:

Blank = inapplicable  
00-nn = number of abortions

**LBPREGS\*\*:**            **“CAPI-based number of completed pregnancies ending in live birth”**

LBPREGS is blank (inapplicable) if R has no completed pregnancies (recode COMPREG=0).

Otherwise, LBPREGS indicates the total number of pregnancies R has had that ended in live birth, either by vaginal or Caesarean delivery. If the woman has never had a multiple birth, then LBPREGS is equivalent to the PARITY recode.

Each such pregnancy is counted regardless of any other outcomes reported for the pregnancy. For example, if a pregnancy ended in live birth and stillbirth, it is counted towards both LBPREGS and LOSSNUM recodes. As a result, COMPREG (the number of completed pregnancies may not equal the sum of LOSSNUM, ABORTION, and LBPREGS values.

Unlike the definitions of LOSSNUM and ABORTION, the LBPREGS recode can be defined solely on the basis of the recode OUTCOME that indicates how the pregnancy ended, with live birth taking precedence over all other outcomes. The OUTCOME recode is based on a Blaise-computed variable called **outcom\_s**, which reflects the pregnancy outcome after all corrections have been made in the pregnancy summary screens. If no corrections were needed to outcome or pregnancy order, then outcom\_s is equivalent to the originally computed variable **prgoutcome**.

SAS Logic:

(based on pregnancy-file data sorted by case ID number and chronologically)

```
if first.caseid and OUTCOME NE 6 then LBPREGS=0;  
/* initialized to 0 only if 1st pregnancy is a completed pregnancy */  
if OUTCOME=1 then LBPREGS+1;  
retain LBPREGS;  
if last.caseid then output LBPREGS;
```

*Note: This is a respondent file recode, but it is constructed based on the pregnancy-file data.*

*Imputation Note:* If *OUTCOME* is flagged for imputation for any of a respondent's pregnancies, the *LBPREGS* recode must be imputed, with a lower bound based on any validly reported values of *OUTCOME* for the respondent's other pregnancies.

Code categories:

Blank = inapplicable  
00-nn = number of pregnancies ending in live birth

**PARITY\*\*:** “CAPI-based total number of live births (accounting for multiple births)”

Values of Blaise-computed variable **numbabes** are used to determine values of **PARITY**). It is then updated based on information from the verification screens at the end of the pregnancy history to define **nbabes\_s**.

numbabes (number of babies born alive) =  
a “counter” variable in the instrument that is initialized to zero, and incremented based on the number of babies born alive (BC-2 NBRNALIV) from each pregnancy that resulted in a live birth.

SAS Logic:

```
If numbabes NE . then PARITY=numbabes;  
Else if numbabes = . then PARITY=0; /* missing values assigned to 0 */  
If nbabes_s NE PARITY and nbabes_s < 97 then PARITY=nbabes_s;
```

Code categories:

00-nn = number of live births

**BIRTHS5\*\*:** “Number of pregnancies ending in live birth in the last 5 years”

BIRTHS5 is blank (inapplicable) if R has had no completed pregnancies (recode COMPREG=0).

Otherwise, BIRTHS5 indicates the total number of pregnancies ending in live birth that R has had within the 60 months before interview.

Blaise-computed variable **cmintvw** indicates “century month” date of interview. Recode **OUTCOME = 1** for any pregnancy that results in live birth  
Recode **DATEND** indicates century-month date when the pregnancy ended

SAS Logic:

(based on pregnancy-file data sorted by case ID number and chronologically)

```
if first.caseid and OUTCOME NE 6 then BIRTHS5=0;  
/* initialized to 0 only if 1st pregnancy is a completed pregnancy */  
if OUTCOME=1 and ((cmintvw-60) <= DATEND) then BIRTHS5+1;
```

retain BIRTHS5;  
if last.caseid then output BIRTHS5;

*Note: This is a respondent file recode, but it is constructed based on the pregnancy file data.*

*Imputation note: Based on imputed values of DATEND and OUTCOME.*

Code categories:

Blank = Inapplicable  
0-n = Number of pregnancies ending in live birth in last 5 years

**OUTCOMnn\*\*:** “Outcome of Nth pregnancy”

OUTCOMnn is blank (inapplicable) if R has been pregnant less than N times (recode PREGNUM LT N).

Else, OUTCOMnn is transferred from pregnancy file recode OUTCOME for R’s Nth pregnancy, and no further imputation is needed.

Code categories:

Blank = Inapplicable  
1 = Live birth  
2 = Induced abortion  
3 = Stillbirth  
4 = Miscarriage  
5 = Ectopic pregnancy  
6 = Current pregnancy

**DATENDnn\*\*:** “Year Nth pregnancy ended”

DATENDnn is blank (inapplicable) if:

- R has been pregnant less than N times (recode PREGNUM LT N), or
- R is currently pregnant with her Nth pregnancy (recode PREGNUM EQ N and recode RCURPREG EQ YES)

Otherwise, if R has had N or more completed pregnancies (recode COMPREG GE N), then DATENDnn is transferred from pregnancy file recode DATEND for R’s Nth pregnancy, and no further imputation is needed.

*User note: For inclusion on the 2015-2017 and 2017-2019 public-use files, the CM dates for DATENDnn were converted to years. The original CM date variables INDATENDnn are restricted use and available only through the NCHS Research Data Center.*

Code categories for DATENDnn (public-use variable):

Blank = inapplicable  
xxxx - 2019 = Year pregnancy ended

Code categories for INDATENDnn (restricted-use variable):

Blank = inapplicable  
xxxx - 1437 = date (century month) pregnancy ended

**AGEPRGnn\*\*:** “Age at Nth pregnancy outcome”

AGEPRGnn is blank (inapplicable) if:

- R has been pregnant less than N times (recode PREGNUM LT N), or
- R is currently pregnant with her Nth pregnancy (recode PREGNUM EQ N and recode RCURPREG EQ YES)

Otherwise,

if R has had N or more completed pregnancies (recode COMPREG GE N), then AGEPRGnn is transferred from pregnancy file recode AGEPRG for R’s Nth pregnancy, and no further imputation is needed.

*User Note:* For 2015-2017 and 2017-2019 NSFG, these recodes show age in whole years, rather than including two implied decimal places as in past public-use file releases. If greater precision is needed, users may apply for access to the original CM dates of pregnancies and CM date of R’s birth (cmbirth) in the NCHS Research Data Center.

Code categories:

Blank = inapplicable  
xx-49 = age at Nth pregnancy outcome

**DATCONnn\*\*:** “Year of Nth conception”

DATCONnn is blank (inapplicable) if R has been pregnant less than N times (recode PREGNUM LT N).

Otherwise,

if R has had an Nth pregnancy (recode PREGNUM GE N), then DATCONnn is transferred from pregnancy file recode DATECON for R’s Nth pregnancy, and no further imputation is needed.

*User note:* For inclusion on the 2015-2017 and 2017-2019 public-use files, the CM dates for DATCONnn were converted to years. The original CM date variable INDATCONnn are restricted use and available only through the NCHS Research Data Center.

Code categories for DATCONnn (public-use variable):

Blank = inapplicable  
xxxx - 2019 = Year of nth pregnancy conception

Code categories for INDATCONnn (restricted-use variable):

Blank = inapplicable  
xxxx - 1437 = date (century month) of nth pregnancy conception

**AGECONnn\*\*:**      **“Age at Nth conception”**

AGECONnn is blank (inapplicable) if R has been pregnant less than N times (recode PREGNUM LT N).

Otherwise,  
if R has had an Nth pregnancy (recode PREGNUM GE 1), then AGECONnn is transferred from pregnancy file recode AGECON for R’s Nth pregnancy, and no further imputation is needed.

*User Note: For 2015-2017 and 2017-2019 NSFG, these recodes show age in whole years, rather than including two implied decimal places as in past public-use file releases. If greater precision is needed, users may apply for access to the original CM dates of pregnancies and CM date of R’s birth (cmbirth) in the NCHS Research Data Center.*

Code categories:

Blank = inapplicable  
xx-49 = age at Nth pregnancy conception

**MAROUTnn\*\*:**      **“Formal marital status at Nth pregnancy outcome”**

MAROUTnn is blank (inapplicable) if:

- R has been pregnant less than N times (recode PREGNUM LT N), or
- R is currently pregnant with her Nth pregnancy (recode PREGNUM EQ N and recode RCURPREG EQ YES)

Otherwise,

If R has had N or more completed pregnancies (recode COMPREG GE N), then MAROUTnn is transferred from pregnancy file recode FMAROUT5 for R’s Nth pregnancy, and no further imputation is needed.

Code categories:

Blank = Inapplicable  
1 = Married  
2 = Divorced  
3 = Widowed  
4 = Separated  
5 = Never married

**RMAROUTnn\*\*:** “Informal marital status at Nth pregnancy outcome”

RMAROUTnn is blank (inapplicable) if:

- R has been pregnant less than N times (recode PREGNUM LT N), or
- R is currently pregnant with her Nth pregnancy (recode PREGNUM EQ N and recode RCURPREG EQ YES)

Otherwise,

If R has had N or more completed pregnancies (recode COMPREG GE N), then RMAROUTnn is transferred from pregnancy file recode RMAROUT6 for R's Nth pregnancy, and no further imputation is needed.

Code categories:

- Blank = Inapplicable
- 1 = Married
- 2 = Divorced
- 3 = Widowed
- 4 = Separated
- 5 = Cohabiting
- 6 = Never married, not cohabiting

**MARCONnn\*\*:** “Formal marital status at Nth pregnancy conception”

MARCONnn is blank (inapplicable) if R has been pregnant less than N times (recode PREGNUM LT N).

Otherwise,

If R has had an Nth pregnancy (recode PREGNUM GE N), then MARCONnn is transferred from pregnancy file recode FMARCON5 for R's Nth pregnancy, and no further imputation is needed.

Code categories:

- Blank = Inapplicable
- 1 = Married
- 2 = Divorced
- 3 = Widowed
- 4 = Separated
- 5 = Never married

**RMARCONnn\*\*:** “Informal marital status at Nth pregnancy conception”

RMARCONnn is blank (inapplicable) if R has been pregnant less than N times (recode PREGNUM LT N)

Otherwise,

If R has had N or more pregnancies (recode PREGNUM GE N), then RMARCONnn is transferred from pregnancy file recode RMARCON6 for R's Nth pregnancy, and no further imputation is needed.

Code categories:

Blank = Inapplicable  
1 = Married  
2 = Divorced  
3 = Widowed  
4 = Separated  
5 = Cohabiting  
6 = Never married, not cohabiting

### **CEBOW\*\***: “Number of children born out of wedlock”

CEBOW is blank (inapplicable) if R has never had a live birth (recode PARITY=0).

Otherwise, CEBOW indicates the total number of children R has had out of wedlock, based on values of:

pregnancy file recodes FMAROUT5 and OUTCOME

pregnancy file Blaise-computed variable **nbrnlv\_s** indicating number of babies born alive from the pregnancy

*Note: CEBOW is only incremented by values >1 if nbrnlv\_s > 1, that is, if it was a multiple birth. Births occurring when R was legally separated (pregnancy file recode FMAROUT5=4) are counted as marital births.*

SAS Logic:

(based on pregnancy-file data sorted by case ID number and chronologically)

```
if first.caseid and OUTCOME NE 6 then CEBOW=0;
/* initialized to 0 only if 1st pregnancy is a completed pregnancy */
if FMAROUT5 in(2,3,5) and OUTCOME=1 then do;
    if 1 LE nbrnlv_s LT 97 then CEBOW + nbrnlv_s;
end;
retain CEBOW;
if last.caseid then output CEBOW;
```

*Note: This is a respondent file recode, but it is constructed based on the pregnancy-file data.*

Code categories:

Blank = inapplicable  
00-nn = number of children born out of wedlock

**CEBOWC\*\*:**            **“Number of children born in cohabiting unions”**

CEBOWC is blank (inapplicable) if R has never had a live birth (recode PARITY=0).

Otherwise, CEBOWC indicates the total number of children R has had during cohabiting unions, based on values of:

pregnancy file recodes RMAROUT6 and OUTCOME

pregnancy file Blaise-computed variable **nbrnlv\_s** indicating number of babies born alive from the pregnancy

*Note: CEBOWC is only incremented by values >1 if nbrnlv\_s > 1 (multiple birth).*

SAS Logic:

(based on pregnancy-file data sorted by case ID number and chronologically)

```
if first.caseid and OUTCOME NE 6 then CEBOWC=0;
/* initialized to 0 only if 1st pregnancy is a completed pregnancy */
if RMAROUT6=5 and OUTCOME=1 then do;
    if 1 LE nbrnlv_s LT 97 then CEBOWC + nbrnlv_s;
end;
retain CEBOWC;
if last.caseid then output CEBOWC;
```

*Note: This is a respondent file recode, but it is constructed based on the pregnancy-file data.*

Code categories:

Blank = inapplicable

00-nn = number of children born in cohabiting unions

**DATBABY1\*\*:**        **“Year of first live birth”**

DATBABY1 is blank (inapplicable) if R has never had a live birth (recode PARITY=0).

Otherwise,

DATBABY1 is equal to the pregnancy file recode INDATEND for R’s first pregnancy that ended in a live birth (where recode OUTCOME first equals 1).

*Note: For inclusion on the 2015-2017 and 2017-2019 public-use files, the CM date for R’s first live birth was converted to years. The original CM date variable INDATBABY1 is restricted-use and available only through the NCHS Research Data Center.*

*Imputation note: Computed based on imputed values of source recodes.*

Code categories for DATBABY1 (public-use variable):

Blank = inapplicable  
xxxx - 2019 = Year of first live birth

Code categories for INDATBABY1 (restricted-use variable):

Blank = inapplicable  
xxxx - 1437 = date (century month) of 1<sup>st</sup> live birth

**AGEBABY1\*\*:**      **“Age at first live birth”**

AGEBABY1 is blank (inapplicable) if R has never had a live birth (recode PARITY=0).

Otherwise,

AGEBABY1 is computed based on recode DATBABY1 and Blaise-computed variable **cmbirth**, which is the century-month when R was born.

$AGEBABY1 = INT[(INDATBABY1 - cmbirth)/12]$

*Note: For 2015-2017 and 2017-2019 NSFG, this recode shows age in whole years, rather than including two implied decimal places as in past public-use file releases. If greater precision is needed, users may apply for access to the original CM date variable INDATBABY1 and CM date of R's birth (cmbirth) in the NCHS Research Data Center.*

*Imputation note: Computed based on imputed values of source recodes.*

Code categories:

Blank = inapplicable  
xx-49 = age at first live birth

## Section C: Marriage and Relationship History

### **FMARNO\*\*:** “Number of times R has been married”

*Note: The FMARNO recode for males is defined based on male Section A.*

FMARNO = 0 if R has never been married (recode FMARITAL = 5).

Else, if R has ever been married (FMARITAL NE 5) then FMARNO is transferred from CA-1 TIMESMAR.

*Imputation Note: Cases with CA-1 TIMESMAR = DK/RF are logically imputed to 1 to match how such cases were routed through 1 marriage loop.*

Code categories:

- 0 = Never been married
- 1-n = Number of marriages

### **CSPBIOKD\*\*:** “Number of biological children R has had with her current spouse or cohabiting partner”

CSPBIOKD is blank (inapplicable):

- if R is not currently married or cohabiting with a male partner (recode RMARITAL NE 1 or 2), or

This variable indicates the number of biological children the married or cohabiting female respondent has ever had with her current husband or partner, regardless of these children’s current ages or living arrangements.

If R is currently cohabiting (RMARITAL=2) then CSPBIOKD is based on CC-19 BIOCP and CC-20 BIONUMCP:

If RMARITAL=2 then do;

If BIOCP in(5,8,9) or HASBABES=5 then CSPBIOKD=0;

Else if BIOCP=1 and (1 <= BIONUMCP <= 25) then CSPBIOKD=BIONUMCP;

Else if BIOCP=1 then impute CSPBIOKD;

End;

If R is currently married (RMARITAL=1) then CSPBIOKD is based on CB-18b BIOHUSBxx and CB-18c BIONUMHxx from the latest loop of the marriage history, which describes R’s current husband (i.e., where xx=TIMESMAR and TIMESMAR NE DK/RF). If R is currently married to her 1st husband and her 1st pregnancy ended after her marriage date, then CSPBIOKD is based on PARITY.

If RMARITAL=1 then do;

if hasbabes=1 and TIMESMAR=1 and (cmfstprg > cmmarrch) and biohusbx=.

```

then CSPBIOKD=PARITY;
else if BIOHUSBxx in(5,8,9) or HASBABES=5 then CSPBIOKD=0;
Else if BIOHUSBxx=1 and (1 <= BIONUMHxx <= 25) then
    CSPBIOKD=BIONUMHxx;
Else if BIOHUSBxx=1 then impute CSPBIOKD;
End;

```

Code categories:

Blank = inapplicable  
0-nn = number of biological children R has had with her current husband or cohabiting partner

**MARDATnn\*\*:**            **“Year of Nth marriage”**

MARDATnn is blank (inapplicable) if R has been married fewer than N times (recode FMARNO LT N).

Otherwise,

MARDATnn is transferred from Blaise-computed variable **cmmarrhx** corresponding to R’s Nth husband.

*Note:        The MARDATnn recodes were defined initially as CM dates of marriage, but for inclusion on the 2015-2017 and 2017-2019 public-use files, the CM dates were converted to years of marriage. The original CM dates are restricted-use, available only through the NCHS Research Data Center.*

Code categories for MARDATnn (public-use variable):

Blank            = inapplicable  
xxxx - 2019      = Year when Nth marriage began

Code categories for INMARDATnn (restricted-use variable):

Blank            = Inapplicable  
xxxx-1437        = CM date when Nth marriage began

**MARDISnn\*\*:**            **“Year of dissolution of Nth marriage”**

MARDISnn is blank (inapplicable) if:

- R has been married fewer than N times (recode FMARNO LT N) or
- R has been married N times (FMARNO = N) and that Nth marriage is intact (recode FMARITAL = 1).

Otherwise,

MARDIS<sub>nn</sub> is transferred from the appropriate non-blank Blaise-computed variable indicating century-month when R's Nth marriage dissolved:

- cmhsbdiex - if marriage ended when husband died.
- cmstphsbnx - if marriage ended in separation, or  
if it ended in divorce/annulment but R stopped living with husband before  
divorce/annulment, or  
if DK/RF how it ended but valid date reported in this variable.
- cmdivorcnx - if marriage ended in divorce/annulment and R did not stop living with  
husband prior to divorce/annulment.

*Note: The MARDIS<sub>nn</sub> recodes were defined initially as CM dates of marriage, but for inclusion on the 2015-2017 and 2017-2019 public-use files, the CM dates were converted to years of marriage. The original CM dates are restricted-use, available only through the NCHS Research Data Center.*

Code categories for MARDIS<sub>nn</sub> (public-use variable):

- Blank =Inapplicable
- xxxx-2019 =Year when Nth marriage dissolved

Code categories for INMARDIS<sub>nn</sub> (restricted-use variable):

- Blank =Inapplicable
- xxxx-1437 =CM date when Nth marriage dissolved

**MAREND<sub>nn</sub> \*\*: "How the Nth marriage ended"**

MAREND<sub>nn</sub> is blank (inapplicable) if:

- R has been married fewer than N times (recode FMARNO LT N) or
- R has been married N times (FMARNO = N) and that Nth marriage is intact (recode FMARITAL = 1).

Otherwise,

If R has been married N times, define MAREND<sub>nn</sub> based on values of recode FMARITAL:

- If FMARITAL=3, then MAREND<sub>n</sub>=1 (divorced or annulled)
- If FMARITAL=4, then MAREND<sub>n</sub>=2 (separated)
- If FMARITAL=2, then MAREND<sub>n</sub>=3 (widowed)

Else, if R has been married more than N times (FMARNO GT N), define MAREND<sub>n</sub> based on responses to CB-19 MARENDH<sub>x</sub> corresponding to the Nth marriage:

*(note that separation is not possible for MAREND<sub>nn</sub> if FMARNO GT N)*

- If MARENDH<sub>x</sub>=2 or 3, then MAREND<sub>n</sub>=1 (divorced or annulled)
- If MARENDH<sub>x</sub>=1, then MAREND<sub>n</sub>=3 (widowed)

*Imputation Note: Imputed for cases with DK/RF values on CB-19 MARENDHx.*

Code categories:

Blank = inapplicable  
1 = Divorced or annulled  
2 = Separated  
3 = Widowed

**FMAR1AGE\*\*:** “Age at first marriage”

FMAR1AGE is blank (inapplicable) if R has never been married (recode FMARITAL = 5).

Otherwise,

FMAR1AGE is computed as follows:

$$\text{FMAR1AGE} = \text{INT}[(\text{MARDAT01} - \text{cmbirth})/12]$$

Code categories:

Blank = inapplicable  
xx-nn = age (in years) at first marriage

**AGEDISS1\*\*:** “Age at dissolution of first marriage”

AGEDISS1 is blank (inapplicable) if:

- R has never been married (recode FMARITAL = 5) or
- R’s first marriage is intact (recode FMARNO = 1 and FMARITAL = 1)

Otherwise,

AGEDISS1 is computed as follows:

$$\text{AGEDISS1} = \text{INT}[(\text{MARDIS01} - \text{cmbirth})/12]$$

Code categories:

Blank=inapplicable  
xx-nn=age (in years) at dissolution of first marriage

**AGEDD1\*\*:** “Age at divorce or death: 1st marriage”

AGEDD1 is blank (inapplicable) if:

- R has never been married (recode FMARITAL = 5) or
- R’s first marriage is intact (recode FMARNO = 1 and FMARITAL = 1) or
- R’s first marriage dissolved by separation only (FMARNO = 1 and FMARITAL = 4).

Otherwise,

AGEDD1 = AGEDISS1:

- If R's first marriage ended in widowhood (recode MAREND01=3); or
- If R's first marriage ended in divorce or annulment (recode MAREND01=1) and the date of divorce (Blaise-computed variable **cmdivorcx**) LE date when R last lived with her first husband (Blaise-computed variable **cmstphsbx**).

AGEDD1 = INT[(cmdivorcx - cmbirth)/12]:

- If R's first marriage ended in divorce or annulment (recode MAREND01=1) and the date of divorce (cmdivorcx) GT date when R last lived with her first husband (cmstphsbx). (*For these cases AGEDISS1 captures date when coresidence ended, and AGEDD1 captures date when formal marital dissolution occurred.*)

Code categories:

- Blank = inapplicable
- xx-nn = age (in years) when 1st marriage ended in divorce or widowhood

**MAR1DISS\*\*:**        **“Months between first marriage and dissolution of first marriage (or interview)”**

MAR1DISS is blank (inapplicable) if R has never been married (recode FMARITAL = 5).

Otherwise:

MAR1DISS = cmintvw - MARDAT01

if R's first marriage is still intact (FMARNO = 1 and FMARITAL = 1).

Else, MAR1DISS = MARDIS01 - MARDAT01:

- If R has been married more than once (recode FMARNO GT 1); or
- If R has been married only once (FMARNO = 1) and the marriage is NOT intact (FMARITAL = 2, 3, or 4).

*User Note: MAR1DISS was defined based on original CM dates of the applicable events, and then redefined as a categorical variable for inclusion on the public-use file. The restricted-use variable INMAR1DISS, available in the NCHS Research Data Center shows the exact number of months as originally defined.*

*If R stopped living with her 1st husband before her divorce or annulment became final, date of dissolution (MARDIS01) is defined as the date when she last lived with him. If you wish to examine months between first marriage and divorce/annulment date, subtract MARDAT01 from Blaise-computed variable cmdivorcx.*

*Imputation Note: Computed based on imputed values of source recodes.*

Code categories for MAR1DISS (public-use variable):

Blank = inapplicable  
1 = 0-12 months  
2 = 13-24 months  
3 = 25-36 months  
4 = 37-48 months  
5 = More than 4 years

Code categories for INMAR1DISS (restricted-use variable):

Blank = inapplicable  
000 = less than 1 month  
001-999 = months between 1st marriage and dissolution (or interview)

**DD1REMAR\*\*:**      **“Months between divorce or death (first marriage) and remarriage (or interview)”**

DD1REMAR is blank (inapplicable) if:

- R has never been married (recode FMARITAL = 5); or
- R's first marriage is intact (recode FMARNO = 1 and FMARITAL = 1); or
- R's first marriage ended in separation only (FMARNO = 1 and MAREND01 = 2).

Otherwise:

DD1REMAR = cmintvw - cmdivorcx:

If R has been married only once (FMARNO = 1) and her first marriage ended in divorce or annulment (FMARITAL = 3).

Else, DD1REMAR = cmintvw - cmhsbdiex:

If R has been married only once (FMARNO = 1) and her first marriage ended in widowhood (FMARITAL = 2).

Else, DD1REMAR = MARDAT02 - cmdivorcx:

If R has been married more than once (FMARNO GT 1) and her first marriage ended in divorce or annulment (MAREND01 = 1).

Else, DD1REMAR = MARDAT02 - cmhsbdiex:

If R has been married more than once (FMARNO GT 1) and her first marriage ended in widowhood (MAREND01 = 3)

*Note: DD1REMAR was defined based on original CM dates of the applicable events, and then redefined as a categorical variable for inclusion on the public-use file. The restricted-use variable INDD1REMAR, available in the NCHS Research Data Center shows the exact number of months as originally defined.*

*Imputation Note:* Computed based on imputed values of source recodes.

Code categories for DDIREMAR (public-use variable):

Blank = inapplicable  
1 = 0-12 months  
2 = 13-24 months  
3 = 25-36 months  
4 = 37-48 months  
5 = More than 4 years

Code categories for INDDIREMAR (restricted-use variable):

Blank = inapplicable  
000 = less than one month  
001-999 = months between end of 1st marriage and remarriage (or interview)

**MAR1BIR1\*\*:** “Months between first marriage and first birth or date of interview”

MAR1BIR1 is blank (inapplicable) if R has never been married (recode FMARITAL = 5) and has never had a live birth (recode PARITY = 0).

Otherwise:

MAR1BIR1 = cmintvw - MARDAT01

If R has ever been married (FMARITAL NE 5), but has not had a live birth (PARITY = 0).

Else, MAR1BIR1 = DATBABY1 - MARDAT01

If R has ever been married (FMARITAL NE 5) AND has had a live birth (PARITY GT 0) AND the date of her first live birth is equal to or later than the date of her first marriage (recode DATBABY1 GE MARDAT01).

Else, MAR1BIR1 = 888

-- If R has never been married (FMARITAL = 5), but has had a live birth (PARITY GT 0);

or

-- If R has ever been married (FMARITAL NE 5) AND has had a live birth (PARITY GT 0) AND the date of her first live birth is earlier than the date of her first marriage (DATBABY1 LT MARDAT01).

*Note:* MAR1BIR1 was defined based on original CM dates of the applicable events, and then redefined as a categorical variable for inclusion on the public-use file. The restricted-use variable INMAR1BIR1, available in the NCHS Research Data Center shows the exact number of months as originally defined.

*Imputation Note:* Computed based on imputed values of source recodes.

Code categories for MAR1BIR1 (public-use variable):

Blank = inapplicable  
1 = 0-12 months  
2 = 13-24 months  
3 = 25-36 months  
4 = More than 3 years  
888 = 1st birth occurred before 1st marriage

Code categories for INMAR1BIR1 (restricted-use variable):

Blank = inapplicable  
000 = less than 1 month  
001-999 = months between 1st marriage and 1st birth (or interview date)  
888 = 1st birth occurred before 1st marriage

**MAR1CON1\*\*:**      **“Months between first marriage and first conception or interview date”**

MAR1CON1 is blank (inapplicable) if R has never been pregnant (recode PREGNUM = 0) and has never been married (recode FMARITAL = 5).

Otherwise:

MAR1CON1 = 996 if R has ever been pregnant (PREGNUM GT 0) but has never been married (FMARITAL = 5).

Else if R has ever been pregnant (PREGNUM GT 0) and has ever been married (FMARITAL NE 5), then:

If the date of first conception is less than the date of first marriage (recode DATCON01 LT recode MARDAT01), then first conception occurred before marriage, and MAR1CON1 = 995.

If the date of first conception is equal to or greater than the date of first marriage (DATCON01 GE MARDAT01), then MAR1CON1 = (DATCON01 - MARDAT01).

Else if R has never been pregnant (PREGNUM = 0) but has ever been married (FMARITAL NE 6), then MAR1CON1 = cmintvw - MARDAT01.

*Note: MAR1CON1 was defined based on original CM dates of the applicable events, and then redefined as a categorical variable for inclusion on the public-use file. The restricted-use variable INMAR1CON1, available in the NCHS Research Data Center shows the exact number of months as originally defined.*

*Imputation Note: Computed based on imputed values of source recodes.*

Code categories for MAR1CON1 (public-use variable):

Blank = inapplicable  
1 = 0-12 months  
2 = 13-24 months  
3 = 25-36 months  
4 = More than 3 years  
995 = 1st conception occurred before 1st marriage  
996 = has been pregnant, but has never been married

Code categories for INMAR1CON1 (restricted-use variable):

Blank = inapplicable  
000 = less than 1 month  
001-999 = months between 1st marriage and 1st conception (or interview)  
995 = 1st conception occurred before 1st marriage  
996 = has been pregnant, but has never been married

**CON1MARI\*\*:**      **“Months between first conception and first marriage or interview date”**

CON1MARI is blank (inapplicable) if R has never been pregnant (recode PREGNUM = 0) and has never been married (recode FMARITAL = 5).

Otherwise:

If R has ever been pregnant (PREGNUM GT 0) and has ever been married (FMARITAL NE 5), then:

if the date of first marriage is the same or earlier than the date of first conception (recode MARDAT01 LE recode DATCON01), then first conception occurred after or in the same month as first marriage, and CON1MARI = 995.

if the date of first marriage is later than the date of first conception (MARDAT01 GT DATCON01), then CON1MARI = (MARDAT01 - DATCON01).

Else if R has ever been pregnant (PREGNUM GT 0) but has never been married (FMARITAL = 5), then CON1MARI = (cmintvw - DATCON01).

Else if R has never been pregnant (PREGNUM = 0) but has ever been married (FMARITAL NE 5), then CON1MARI = 996.

*Note: CON1MARI was defined based on original CM dates of the applicable events, and then redefined as a categorical variable for inclusion on the public-use file. The restricted-use variable INCON1MARI, available in the NCHS Research Data Center shows the exact number of months as originally defined.*

*Imputation Note:* Computed based on imputed values of source recodes.

Code categories for CON1MAR1 (public-use variable):

Blank = inapplicable  
1 = 0-12 months  
2 = 13-24 months  
3 = 25-36 months  
4 = More than 3 years  
996 = has been married, but has never been pregnant

Code categories for INCON1MAR1 (restricted-use variable):

Blank = inapplicable  
000 = less than 1 month  
001-999 = months between 1st conception and 1st marriage (or interview)  
995 = 1st conception after or in same month as 1st marriage  
996 = has been married, but has never been pregnant

**B1PREMAR\*\*:** “Whether R’s first birth was premarital”

B1PREMAR is blank (inapplicable) if R has never had a live birth (recode PARITY=0).

Otherwise:

B1PREMAR=1 (yes) if: --R has never been married (recode FMARITAL=5), or  
--respondent file recode DATBABY1 < recode MARDAT01

B1PREMAR=2 (no) if: DATBABY1 >= MARDAT01

*Note:* If users wish to limit to respondents who have ever been married, they should subset cases with FMARITAL NE 5.

*Imputation Note:* Computed based on imputed values of source recodes.

Code categories:

Blank = inapplicable  
1 = yes (1st birth before 1st marriage)  
2 = no (1st birth in same month as or later than 1st marriage)

**COHEVER\*\*:** “Whether R ever cohabited outside of marriage”

Values of Blaise-computed variable **evrcohab** are used to determine values of COHEVER, which indicates any cohabitation experience, either premaritally or with a partner whom R never married. See Flow Check C-32 in CRQ for definition of evrcohab.

*User Note: This recode has no inapplicable category. If you wish to limit analysis of cohabitation to those who have ever had intercourse, use SEXEVER or HADSEX, depending on the manner in which you wish to handle the timing of first intercourse relative to menarche.*

Code categories:

- 1 = Yes, ever cohabited (lived with a man outside of marriage)
- 2 = No, never cohabited (lived with a man outside of marriage)

**EVMARCOH\*\*:**     **“Whether R ever married or cohabited”**

Recodes FMARITAL and COHEVER are used to define EVMARCOH.

If FMARITAL NE 5 or COHEVER = 1 then EVMARCOH = 1;  
Else EVMARCOH = 2;

*Imputation Note:        Computed based on imputed values of source recodes.*

Code categories:

- 1 = Yes, ever married or cohabited
- 2 = No, never married or cohabited

**PMARRNO\*\*:**     **“Number of premarital cohabitations”**

PMARRNO is initialized to 0 and increased by one for each premarital cohabitation (CB-5 LIVTOGHX =1).

```
SAS logic:
array PCOH [6] LVTOGHX LVTOGHX2-LVTOGHX6;
pmarrno=0;
pmarmiss=0;
do i=1 to fmarno;
if PCOH[i]=1 then PMARRNO=PMARRNO+1;
if pcoh[i] in (8,9) then pmarmiss=pmarmiss+1; end;
if pmarmiss GT 0 then pmarrno=-1; /*flag to be imputed*/
```

*Imputation Note:        Impute when CB-5 LVTOGHX[X] = DK/RF. PMARRNO must be constrained to be LE FMARNO.*

Code categories:

- 0-n = number of premarital cohabiting partners

**NONMARR##:**     **“Number of nonmarital cohabitations (i.e., cohabitations not ending in marriage)”**

NONMARR = 0     if R has never cohabited (evrcohab=5) or if R has never lived with a man and

is not currently cohabiting or living with a male partner [(CD-1 LIVEOTH = 5) and (RMARITAL NE 2)]

Else,

NONMARR = (prevcohb + 1) if R is currently cohabiting (RMARITAL=2)

Else,

NONMARR = prevcohb if R is not currently cohabiting (RMARITAL NE 2)

SAS logic:

```
nonmarr=.;  
if hmothmen not in (98,99) and liveoth not in (8,9) then do;  
  
if (evrcohab=5) or ((liveoth =5) and (RMARITAL NE 2))then  
nonmarr=0;  
else if (RMARITAL=2) then nonmarr=prevcohb + 1;  
else if (RMARITAL NE 2) then nonmarr=prevcohb;  
end;
```

*Note: The original NONMARR recode, as defined above, was top-coded for public use at 5 to represent 5 or more nonmarital cohabiting partners. The full-detail variable called INNONMARR is available through the NCHS Research Data Center.*

*Imputation Note: Imputed if CD-2 HMOTHMEN is DK/RF OR CD-1 LIVEOTH is DK/RF*

Code categories:

0-4 = number of nonmarital cohabiting partners  
5 = 5 or more nonmarital cohabiting partners

**TIMESCOH##:** “Total number of cohabitations”

TIMESCOH = recode PMARRNO + recode NONMARR

SAS logic:

```
if pmarrno GE 0 and nonmarr GE 0 then do;  
timescoh=pmarrno+nonmarr;  
end;  
run;
```

*Note: The original TIMESCOH recode, as defined above, was top-coded for public use at 5 to represent 5 or more cohabiting partners ever. The full-detail variable called INTIMESCOH is available through the NCHS Research Data Center.*

*Imputation Note: Computed based on imputed values of source recodes.*

Code categories:

0-4 = total number of cohabiting partners ever  
5 = 5 or more cohabiting partners ever

**COHAB1\*\*:**            **“Year of first cohabitation (including premarital cohabitation)”**

COHAB1 is blank (inapplicable) if R has never cohabited outside of marriage (COHEVER=2).

Otherwise:

COHAB1 is the earliest, nonmissing date from among:

cmpmcohx - CM when R began premarital cohabitation with X-order husband

cmstrtcp - CM when R began living with current cohabiting partner

cmcohstx - CM when R began living with all other cohabiting partners (up to total number of previous cohabiting partners, given by Blaise-computed variable **prevcohb**) (*we need to check more than the 1st former cohabiting partner start dates because R may not have reported her former partners chronologically.*)

*Note: The COHAB1 recode was defined initially as CM date of first cohabitation, but for inclusion on the 2015-2017 and 2017-2019 public-use files, the CM date was converted to year of first cohabitation. The original CM date variable is restricted-use, available only through the NCHS Research Data Center.*

Code categories for COHAB1 (public-use variable):

Blank            = inapplicable  
xxxx - 2019    = Year of first cohabitation

Code categories for INCOHAB1 (restricted-use variable):

Blank            = Inapplicable  
xxxx-1437      = CM date when R began 1st cohabitation

**COHSTAT\*\*:**            **“Cohabitation experience relative to first marriage”**

COHSTAT = 1            if R has never cohabited (recode COHEVER = 2).

Else

COHSTAT = 2            --     if R has never been married (recode FMARITAL = 5) but has cohabited (COHEVER =1); or  
                          --     if R has ever been married (FMARITAL NE 5) and has cohabited (COHEVER =1) and date of first cohabitation (recode COHAB1) is same as or earlier than date of first marriage (recode MARDAT01).

Else

COHSTAT = 3            if R has ever been married (FMARITAL NE 5) and has cohabited (COHEVER =1) and date of first cohabitation is greater than date of first marriage (COHAB1 GT MARDAT01).

SAS Logic:

If COHEVER = 2 then COHSTAT = 1;  
Else if (FMARITAL=5 and COHEVER=1) or (FMARITAL NE 5 and COHEVER=1 and  
COHAB1 LE MARDAT01) then COHSTAT = 2;  
Else if (FMARITAL NE 5 and COHEVER=1 and COHAB1 > MARDAT01) then  
COHSTAT = 3;

*Imputation Note: Computed based on imputed values of source recodes.*

Code categories:

- 1 = never cohabited outside of marriage
- 2 = first cohabited before first marriage
- 3 = first cohabited after first marriage

**COHOUT\*\*:**            **“Outcome of first cohabitation”**

COHOUT is blank (inapplicable) if R has never cohabited outside of marriage (recode COHEVER = 2).

COHOUT = 1

if R is currently cohabiting and her first cohabitation is intact (recode RMARITAL = 2 and recode COHAB1 came from cmstrtcp). (*Blaise-computed variable cmstrtcp indicates start of cohabitation with current partner.*)

Else COHOUT = 2

if R is currently married to her first cohabitation partner (RMARITAL=1 and the date of her first cohabitation COHAB1 came from cmpmcohx or cmpmcohx2-cmpmcohx6 corresponding to her most recent marriage; for example, COHAB1=cmpmcohx if FMARNO=1, COHAB1=cmpmcohx2 if FMARNO=2, etc.). (*Blaise-computed variables cmpmcohx and cmpmcohx2-cmpmcohx6 indicates CM start dates of premarital cohabitation with 1st-6th husbands.*)

Else COHOUT = 3

if R is not currently married (RMARITAL NE 1) and the outcome of R’s first cohabitation is a marriage that dissolved (COHAB1 came from cmpmcohx or cmpmcohx2-cmpmcohx6, and FMARITAL = 2, 3, or 4); or if R is married but not for first time (RMARITAL=1 and FMARNO>1) and her first cohabitation was with a former husband (COHAB1 came from cmpmcohx or cmpmcohx2-cmpmcohx6).

Else COHOUT = 4

if the outcome of R’s first cohabitation is dissolution without marriage (COHAB1 came from cmcohstx or cmcohstx2-cmcohstx4). (*Blaise-computed variables cmcohstx and cmcohstx2-cmcohstx4 indicate CM start dates of cohabitation with X-order former cohabiting partner.*)

*Imputation Note: Computed based on imputed values of source recodes.*

Code categories:

- Blank = inapplicable
- 1 = intact cohabitation
- 2 = intact marriage
- 3 = dissolved marriage
- 4 = dissolved cohabitation

**COH1DUR\*\*:**            **“Duration (in months) of R’s first cohabitation”**

COH1DUR is blank (inapplicable) if R has never cohabited (recode COHEVER=no).

Otherwise:

COH1DUR = number of months between recode COHAB1 and appropriate end date from below:

- Blaise-computed **cmintvw** if 1st cohabitation is intact (recode COHOUT=1)
- or
- appropriate recode among MARDAT01-MARDAT06 if 1st cohabitation resulted in marriage, whether intact or dissolved marriage (COHOUT=2 or 3)
- or
- end date of 1st cohabitation (Blaise-computed **cmstpcohx** or **cmstpcohx2-cmstpcohx4**, depending on which former cohabiting partner was her first) if 1st cohabitation dissolved (COHOUT=4)

*Note: COH1DUR was defined based on original CM dates of the applicable events, and then redefined as a categorical variable for inclusion on the public-use file. INCOH1DUR, available in the NCHS RDC, shows the exact number of months as originally defined.*

*In cases where COHOUT=2 or 3 (1st cohabitation resulted in marriage), COH1DUR indicates duration of premarital cohabitation. Users may wish to subset cases based on value of COHOUT, the recode indicating outcome of R’s first cohabitation.*

*Imputation Note: Computed based on imputed values of source recodes.*

Code categories for COH1DUR (public-use variable):

- Blank = inapplicable
- 1 = 0-12 months
- 2 = 13-24 months
- 3 = 25-36 months
- 4 = 37-48 months
- 5 = More than 4 years

Code categories for INCOH1DUR (restricted-use variable):

Blank = inapplicable  
0 = Less than 1 month  
1-nn = number of months

**HADSEX\*\*:** “Whether R has ever had sexual intercourse with a male”

Values of Blaise-computed variable rhadsex are used to determine values of HADSEX (see Flow Checks C-42 and C-44 for the definition of rhadsex).

If rhadsex=1 then HADSEX=1.  
Else if rhadsex=5 then HADSEX=2.

*Imputation Note:* None is needed because rhadsex was set to 5 when CE-1 EVERSEX=5, DK or RF.

Code categories:

1 = Yes, R ever had intercourse  
2 = No, R never had intercourse

**SEXEVER\*\*:** “Whether R has ever had sexual intercourse with a male since first menstrual period”

SEXEVER=1 (yes) if:

- R’s first intercourse occurred *after* her first menstrual period (pre-imputation recode VRY1STAG GT BA-1 MENARCHE or CG-8 WHICH1ST = 2), or
- R’s first intercourse occurred *before* her first menstrual period (pre-imputation recode VRY1STAG LT BA-1 MENARCHE or CG-8 WHICH1ST = 1, system-missing, 8, or 9) but she did have intercourse after menarche (CG-9 SEXAFMEN=1 or cmsexafm < 9996 or CG-11 AGESXAFM<98). (*Blaise-computed variable cmsexafm indicates century-month when R first had sex after menarche if her first sex was before menarche.*)

SEXEVER=2 (no) if:

- R has not yet had her first menstrual period (BA-1 MENARCHE = 96); or
- R has never had sexual intercourse at all (recode HADSEX = 2); or
- R’s first intercourse occurred before menarche (pre-imputation recode VRY1STAG LT BA-1 MENARCHE or CG-8 WHICH1ST = system-missing, 1, 8, 9), and she did *not* have intercourse after menarche (CG-9 SEXAFMEN=5 or cmsexafm = 9996).

*Imputation note:* Imputation uses recode VRY1STAG, but uses pre-imputation values only.

Code categories:

1 = Yes, R has had sexual intercourse after her 1st menstrual period  
2 = No, R has not had first menstrual period, has not had sexual intercourse at all, or

has not had sexual intercourse since her 1st menstrual period

**VRY1STAG##:** “Age at first intercourse (even if before first menstrual period)”

VRY1STAG is blank (inapplicable) if R has never had intercourse (recode HADSEX=2).

OTHERWISE,

If CE-4 AGEFSTSX is not missing (AGEFSTSX LT 98), then:

VRY1STAG = AGEFSTSX

Else,

if CE-4 AGEFSTSX is missing (AGEFSTSX = 98 or 99) and R reported a valid date of first sex (cmfstsex LT end of data collection period), then:

VRY1STAG = INT((cmfstsex - cmbirth)/12) (Blaise-computed variable cmfstsex indicates CM of 1st sex)

Else,

if CE-4 AGEFSTSX = DK or RF and cmfstsex is DK or RF, then estimate VRY1STAG as follows:

If R was between 15 and 18 at first intercourse (CE-5 C\_SEX18 = 1 and CE-6 C\_SEX15 = 2), then VRY1STAG=16.

If R was between 18 and 20 at first intercourse (CE-5 C\_SEX18 = 2 and CE-7 C\_SEX20 = 1), then VRY1STAG=19.

*Note: For 2017-2019, the original VRY1STAG recode, as defined above, was bottom-coded for public use at 10 to represent age 10 or younger. The full-detail variable called INVRY1STAG is available through the NCHS Research Data Center.*

*Imputation Notes:* -- Imputation needed for cases with DK or RF on CE-5 C\_SEX18, CE-6 C\_SEX15, or CE-7 C\_SEX20 (who also have AGEFSTSX=DK/RF and cmfstsex=DK/RF).  
-- Some cases may have valid data on C\_SEX18, C\_SEX15 and/or C\_SEX20, but still designated for imputation because the criteria for the combination specified above was not met. These were used to guide imputation. For example, if case meets criteria for receiving value from CE-5 C\_SEX18, CE-6 C\_SEX15, or CE-7 C\_SEX20, but remains -1 because C\_SEX15 or C\_SEX20=dk/rf, imputed value min and max should be guided by C\_SEX18. That is: if C\_SEX18=1 and C\_SEX15=DK/RF, then max imputed value should be 17. If C\_SEX18=2 and C\_SEX20=DK/RF, then min imputed value should be 18.

Code categories for VRY1STAG (public-use variable):

Blank	= inapplicable
10	= age 10 years or younger
11-49	= age in years

Code categories for INVRY1STAG (restricted-use variable):

Blank = inapplicable  
0-49 = age in years

**SEX1AGE<sup>##</sup>: “Age at first intercourse since first menstrual period”**

SEX1AGE is blank (inapplicable) if R has never had intercourse at all (recode HADSEX=2) or if she has never had intercourse since first menstrual period (recode SEXEVER=2) or she has not had first menstrual period (BA-1 MENARCHE=96).

*OTHERWISE, for all Rs who have had sexual intercourse since menarche (SEXEVER=1):*

If her first intercourse occurred after her first menstrual period (recode VRY1STAG GT BA-1 MENARCHE or CG-8 WHICH1ST=2), then:

SEX1AGE = recode VRY1STAG

Else, if her first intercourse was before her first menstrual period (recode VRY1STAG LT BA-1 MENARCHE or CG-8 WHICH1ST=1), then:

If CG-11 AGESXAFM is not missing (AGESXAFM LT 98), then:

SEX1AGE = CG-11 AGESXAFM

Else, if CG-11 AGESXAFM is missing (AGESXAFM GE 98) and R reported a valid date of first sex after menarche (cmsexafm LT end of data collection period), then:

SEX1AGE = INT((cmsexafm - cmbirth)/12) (*Blaise-computed variable  
cmsexafm indicates CM of 1st  
sex since menarche*)

Else, if CG-11 AGESXAFM = DK or RF and cmsexafm is DK or RF, then estimate SEX1AGE as follows:

If R was between 15 and 18 at first intercourse after menarche (CG-12 AFMEN18 = 1 and CG-13 AFMEN15 = 2), then SEX1AGE=16.

If R was between 18 and 20 at first intercourse after menarche (CG-12 AFMEN18 = 2 and CG-14 AFMEN20 = 1), then SEX1AGE=19.

*Note: For 2017-2019, the original SEX1AGE recode, as defined above, was bottom-coded for public use at 10 to represent age 10 or younger. The full-detail variable called INSEX1AGE is available through the NCHS Research Data Center.*

*Imputation Notes:* Imputation needed for cases with BA-1 MENARCHE=DK/RF, or (AGEFSTSX=DK/RF and cmfstsex=DK/RF, who also have DK or RF on CG-12 AFMEN18, CG-13 AFMEN15, and CG-14 AFMEN20), or have a combination of values on AFMEN18, AFMEN15, and AFMEN20 that do not permit estimation. If the latter is true, any available information on AFMEN18, AFMEN15, or AFMEN20 is used to guide imputation. For example, if case meets criteria for receiving value from CG-12 AFMEN18, CG-13 AFMEN15, and CG-14 AFMEN20, but remains -1 because AFMEN18 or AFMEN20=dk/rf, imputed value min and max should be guided by AFMEN18. That is: if AFMEN18=1 and AFMEN15=DK/RF, then max imputed value should be 17. If AFMEN18=2 and AFMEN20=DK/RF, then min imputed value should be 18. Imputation also needed for cases with agesxafm<menarche and no further information available in AFMEN15, AFMEN18, and AFMEN20.

Code categories SEX1AGE (public-use variable):

Blank	= inapplicable
10	= age 10 years or younger
11-49	= age in years

Code categories for INSEX1AGE (restricted-use variable):

Blank	= inapplicable
0-49	= age in years

**VRY1STSX##:** “Date of first intercourse (even if before first menstrual period)”

VRY1STSX is blank (inapplicable) if R has never had sexual intercourse at all (recode HADSEX = 2).

Otherwise,  
VRY1STSX = cmfstsex

Values of Blaise-computed variable cmfstsex are used to determine values of VRY1STSX (see Flow Check C-44 for the definition of cmfstsex).

*Note:* For 2017-2019, when the corresponding recode VRY1STAG has been bottomcoded at 10 for public use or the date reported was when the respondent was age 10 or younger, values of VRY1STSX are coded as 9997 (not ascertained). The original, full-detail variable called INVRY1STSX is available through the NCHS Research Data Center.

*Imputation Note:* Needed for cases where cmfstsex = DK or RF

Code categories VRY1STSX (public-use variable):

Blank	= inapplicable
xxxx-nnnn	= CM date of first intercourse
9996	= responded she never had intercourse

9997 = not ascertained

Code categories INVRY1STSX (restricted-use variable):

Blank = inapplicable  
xxxx-nnnn = CM date of first intercourse  
9996 = responded she never had intercourse

**DATESEX1##: “Date of first intercourse after first menstrual period”**

DATESEX1 is blank (inapplicable) if R has never had intercourse at all (recode HADSEX=2) or if she has never had intercourse since first menstrual period (recode SEXEVER=2).

If R has not had her first menstrual period (BA-1 MENARCHE = 96) but has had intercourse (recode HADSEX=1), then DATESEX1 = 9595.

*OTHERWISE, for all Rs who have had sexual intercourse since menarche (SEXEVER=1):*

If her first intercourse occurred after her first menstrual period (recode VRY1STAG GT BA-1 MENARCHE or CG-8 WHICH1ST=2), then:

DATESEX1 = VRY1STSX

Else, if her first intercourse was before her first menstrual period (cmsexafm not equal to system-missing, 9998 or 9999) and (recode VRY1STAG LT BA-1 MENARCHE or CG-8 WHICH1ST=1 or SEXAFMEN=1), then:

DATESEX1 = cmsexafm  
*(Values of Blaise-computed variable cmsexafm are used to determine values of DATESEX1 -- see Flow Check C-60 for the definition of cmsexafm).*

*Note: For 2017-2019, when the corresponding recode SEXIAGE has been bottomcoded at 10 for public use or the date reported was when the respondent was age 10 or younger, values of DATESEX1 are coded as 9997 (not ascertained). The original, full-detail variable called INDATESEX1 is available through the NCHS Research Data Center.*

Code categories DATESEX1 (public-use variable):

Blank = inapplicable  
xxxx-nnnn = CM date of first intercourse after menarche  
9595 = never had a menstrual period but has had intercourse  
9997 = not ascertained

Code categories INDATESEX1 (restricted-use variable):

Blank = inapplicable  
xxxx-nnnn = CM date of first intercourse after menarche  
9595 = never had a menstrual period but has had intercourse

**SEXONCE\*\*:**        **“Whether R has had sex only once”**

SEXONCE is blank (inapplicable) if R has never had sexual intercourse (recode HADSEX=no).

Otherwise:

SEXONCE=1 (R has had sex only once) if CE-9 SXMTONCE=5 (no).

SEXONCE=2 (R has had sex more than once) if:

- R has ever been married or ever cohabited (recode EVMARCOH=1) or
- R reported that she has had sex more than once (CE-9 SXMTONCE=1)

*Imputation Note:*        *Imputation needed for cases with CE-9 SXMTONCE = DK or RF.*

Code categories:

- Blank = inapplicable
- 1 = Yes (R has had sex only once)
- 2 = No (R has had sex more than once)

**FPDUR\*\*:**        **“Number of months between first and last/most recent sexual intercourse with first partner ever”**

FPDUR is blank (inapplicable) if R has never had sexual intercourse (recode HADSEX=2).

Else if Blaise-computed variable cmlsexfp (Flow check C-57) not system-missing, 9998, or 9999 then:

- If cmlsexfp=9996 then FPDUR=997
- Else FPDUR = cmlsexfp minus VRY1STSX

*Imputation note:*        *Imputation needed if inputs are missing and also computed based on imputed values of VRY1STSX. Imputation needed if cmlsexfp is earlier (less than) VRY1STSX.*

Code categories:

- Blank = Inapplicable
- 0 – nnn = number of months
- 997 = only had sex once with partner

**SEXMAR##:**        **“Months between first intercourse (even if before first menstrual period) and first marriage (or interview)”**

SEXMAR is blank (inapplicable) if R has never had intercourse at all (recode HADSEX=2).

Otherwise:

SEXMAR is the number of months between “the end of the interval” and the date of first intercourse (recode VRY1STSX). The end of the interval is defined as follows:

if R has never been married (recode FMARITAL = 5), use cmintvw

$$\text{SEXMAR} = \text{CMINTVW} - \text{VRY1STSX}$$

if R has ever been married (FMARITAL NE 5), use recode MARDAT01

if date of first intercourse was *before or same as* date of first marriage then  
SEXMAR = MARDAT01 minus VRY1STSX.

(if VRY1STSX LE MARDAT01 then SEXMAR = MARDAT01 - VRY1STSX)

if date of first intercourse was *after* date of first marriage then SEXMAR=996  
(if VRY1STSX GT MARDAT01 then SEXMAR=996)

*Note:* SEXMAR was initially defined based on original CM dates of the applicable events, and then redefined as a categorical variable for inclusion on the public-use file for NSFG 2015-2017 and 2017-2019. INSEXMAR, available in the NCHS Research Data Center, shows the exact number of months as originally defined.

*Imputation Note:* Computed based on imputed values of source recodes.

Code categories for SEXMAR (public-use variable):

Blank	=	inapplicable
1	=	0-12 months
2	=	13-24 months
3	=	25-36 months
4	=	More than 3 years
5	=	First intercourse after first marriage

Code categories for INSEXMAR (restricted-use variable):

Blank	=	inapplicable
000	=	first intercourse in same month as marriage
001-nnn	=	1 to nnn months after first intercourse
996	=	first intercourse after first marriage

**SEX1FOR\*\*:** “Months between first intercourse after first menstrual period and first marriage (or interview)”

SEX1FOR is blank (inapplicable) if R has never had intercourse at all (recode HADSEX=2) or if

she has never had intercourse since first menstrual period (recode SEXEVER=2).

Otherwise:

For Rs who have had intercourse since menarche (SEXEVER=1):

If her first intercourse occurred after her first menstrual period (recode VRY1STAG GT BA-1 MENARCHE or CG-8 WHICH1ST=2), then:

SEX1FOR = SEXMAR

Else, if her first intercourse was before her first menstrual period (cmsexafm not equal to system-missing, 9998 or 9999) and (recode VRY1STAG LT BA-1 MENARCHE or CG-8 WHICH1ST=1 or SEXAFMEN=1), then:

SEX1FOR is the number of months between “the end of the interval” and the date of first intercourse since menarche (recode DATESEX1). The end of the interval is defined as follows:

if R has never been married (recode FMARITAL = 5), use cmintvw:

SEX1FOR=cmintvw-DATESEX1

if R has ever been married (FMARITAL NE 5), use recode MARDAT01:

if date of first intercourse after menarche was *before or same as* date of first marriage then SEX1FOR = MARDAT01 minus DATESEX1

(if DATESEX1 LE MARDAT01 then SEX1FOR = MARDAT01 – DATESEX1)

if date of first intercourse after menarche was *after* date of first marriage then SEX1FOR=996

(if DATESEX1 GT MARDAT01 then SEX1FOR=996)

*Note: SEX1FOR was initially defined based on original CM dates of the applicable events, and then redefined as a categorical variable for inclusion on the public-use file for NSFG 2015-2017 and 2017-2019. INSEX1FOR, available in the NCHS Research Data Center, shows the exact number of months as originally defined.*

*Imputation Note: Computed based on imputed values of source recodes.*

Code categories for SEX1FOR (public-use variable):

Blank = inapplicable

1 = 0-12 months

2 = 13-24 months

3 = 25-36 months

4 = More than 3 years

5 = First intercourse after menarche after first marriage

Code categories for INSEX1FOR (restricted-use variable):

Blank	= inapplicable
000	= first intercourse after menarche in same month as marriage
001-999	= months after first intercourse after menarche
996	= first intercourse after menarche after first marriage

**SEXUNION\*\*:**       **“Months between first intercourse (even if before first menstrual period) and first coresidential union (or interview)”**

SEXUNION is blank (inapplicable) if R has never had intercourse at all (recode HADSEX=2).

Otherwise:

SEXUNION is the number of months between “the end of the interval” and the date of first intercourse (recode VRY1STSX). The end of the interval is the earliest, valid date amongst the date of 1<sup>st</sup> marriage, the date of 1<sup>st</sup> cohabitation outside of marriage, and the date of interview.

If R has never been married (recode FMARITAL = 5) and never cohabited (COHEVER=2), SEXUNION is based on interval between 1<sup>st</sup> sexual intercourse and the interview:

SEXUNION=CMINTVW-VRY1STSX

Else, if R has ever been married (FMARITAL NE 5) but has never cohabited outside of marriage (COHEVER=2), SEXUNION is equal to SEXMAR value:

SEXUNION=SEXMAR

Else, if R has never been married (FMARITAL=5) but has ever cohabited outside of marriage (COHEVER=1), SEXUNION is based on the interval between 1<sup>st</sup> sexual intercourse and 1<sup>st</sup> cohabitation:

If COHAB1 < VRY1STSX, then set SEXUNION=996 (*1st intercourse occurred later than 1st cohabitation*).

Else, SEXUNION=COHAB1-VRY1STSX

Else, if R has ever been married (FMARITAL NE 5), has ever cohabited outside of marriage (COHEVER=1), and 1<sup>st</sup> cohabitation began before 1<sup>st</sup> marriage (COHSTAT=2):

If COHAB1 < VRY1STSX, then set SEXUNION=996 (*1st intercourse occurred later than 1st cohabitation*).

Else, SEXUNION=COHAB1-VRY1STSX

Else, if R has ever been married (FMARITAL NE 5), has ever cohabited outside of marriage (COHEVER=1), and 1<sup>st</sup> cohabitation began after 1<sup>st</sup> marriage (COHSTAT=3):

## SEXUNION=SEXMAR

### *SAS logic:*

```
If hadsex=2 then sexunion=.;  
Else if fmarital=5 and cohever=2 then sexunion=cmintvw-vry1stsx;  
Else if fmarital NE 5 and (cohever=2 or cohstat=3) then  
    sexunion=sexmar;  
Else if (fmarital=5 and cohever=1) or (fmarital NE 5 and cohstat=2) then do;  
    if cohab1 GE vry1stsx then sexunion=cohab1-vry1stsx;  
    else if cohab1 LT vry1stsx then sexunion=996;  
end;
```

*Note:* *SEXUNION* was initially defined based on original CM dates of the applicable events, and then redefined as a categorical variable for inclusion on the public-use file for NSFG 2015-2017 and 2017-2019. *INSEXUNION*, available in the NCHS Research Data Center, shows the exact number of months as originally defined.

*Imputation Note:* Computed based on imputed values of source recodes.

Code categories for SEXUNION (public-use variable):

Blank	= inapplicable
1	= 0-12 months
2	= 13-24 months
3	= 25-36 months
4	= More than 3 years
5	= First intercourse after first marriage or cohabitation

Code categories for INSEXUNION (restricted-use variable):

Blank	= inapplicable
000	= first intercourse in same month as marriage or cohabitation
001-nnn	= months after first intercourse
996	= first intercourse after first marriage or cohabitation

### **SEXOUT\*\*:** “Outcome of first sexual intercourse”

SEXOUT is blank (inapplicable) if R has never had sexual intercourse with a male partner (recode HADSEX = 2).

Else SEXOUT = 1 if R is currently cohabiting with her first sexual partner (recode RMARITAL = 2 and CG-3 WHOFSTPR=8, current cohabiting partner).

Else SEXOUT = 2 if R is currently married to her first sexual partner (RMARITAL=1 and CG-3 WHOFSTPR=7, current husband).

Else SEXOUT = 3 if R is not currently married (RMARITAL NE 1) and CG-3 WHOFSTPR in (1 2 3 4 5 6 7, any former or separated husband). (*including code 7 to cover cases where R is separated from this husband – not strictly “dissolved” but not “intact” either*)

Else SEXOUT = 4 if the outcome of R’s first sexual intercourse is a cohabitation that dissolved without marriage (CG-3 WHOFSTPR in(9 10 11 12), any of up to 4 former cohabiting partners to whom R was never married).

Else SEXOUT = 5 If R’s first sexual partner was never a husband or a cohabiting partner (CG-3 WHOFSTPR=20 or CG-2 SAMEMAN = 5, DK, RF, or system-missing).

*Imputation note: Imputed if CG-3 WHOFSTPR=DK/RF.*

Code categories:

- Blank = inapplicable
- 1 = intact cohabitation
- 2 = intact marriage
- 3 = dissolved marriage
- 4 = dissolved cohabitation
- 5 = never married or cohabited with 1<sup>st</sup> sexual partner

**RELATP1-3\*\*:** “**Relationship at first sexual intercourse with (most recent / second-to-last / third-to-last) sexual partner (in the past 12 months)**”

Most recent partner:

RELATP1 is blank (inapplicable) if R had no partners in the past 12 months (PARTS1YR = 0 or sysmis).

If R’s most recent partner was R’s first partner ever (LIFEPR1=1 or MATCHFP=1 or p1yrelp=13 or (p1yrelp=7 and CG-2 SAMEMAN=1 and CA-1 TIMESMAR=1) or (p1yrelp=8 and CG-2 SAMEMAN=1 and TIMESCOH=1)) then if there is a valid response to relationship at first sex with R’s first partner ever (CG-5 KNOWFP ne ., dk, rf):

RELATP1=CG-5 KNOWFP

Else if R’s most recent partner was not R’s first partner ever (LIFEPR1>1 and p1yrelp NE 13) then if there is a valid response to relationship at first sex with R’s most recent partner (CI-11 P1YRFX ne ., dk, rf):

RELATP1 = CI-11 P1YRFX

Second- and third- most recent partners:

RELATP2 is blank (inapplicable) if:

- R has never had sexual intercourse (recode HADSEX=2), or if
- R had no partners or only 1 partner (parts12 = 0 or 1) in the past 12 months

RELATP3 is blank (inapplicable) if:

- R has never had sexual intercourse (recode HADSEX=2), or if
- R had no partners, or only 1 or 2 partners (parts12 = 0, 1, or 2) in the past 12 months

If R's 2<sup>nd</sup> / 3rd most recent partner was R's first partner ever (p1yrelp2/3 = 13) then if there is a valid response to relationship at first sex with R's first partner ever (CG-5 KNOWFP ne ., dk, rf):

RELATP1=CG-5 KNOWFP

Else if R's most recent partner was not R's first partner ever (LIFEPR2/3 >= 2/3 and p1yrelp2/3 NE 13) then if there is a valid response to relationship at first sex with R's 2<sup>nd</sup> / 3rd most recent partner (CI-11 P1YRFX2/3 ne ., dk, rf):

RELATP2/3 = P1YRFX2/3

*Imputation note:*      *Needed for cases meeting applicable criterion and for whom KNOWFP or P1YRFX, P1YRFX2, or P1YRFX3, whichever is applicable, is sysmis, dk, or rf.*

Code categories:

Blank =	Inapplicable
1 =	Married to him
2 =	Engaged to him
3 =	Living together in a sexual relationship, but not engaged
4 =	Going out with him or going steady
5 =	Going out with him once in a while
6 =	Just friends
7 =	Had just met him
8 =	Something else

**PARTDUR1-3\*\*:**      **“Number of months between first and most recent sexual intercourse with (most recent or last ever/ second-to-last / third-to-last) sexual partner (in the past 12 months)”**

PARTDUR1 is blank (inapplicable) if R has never had sexual intercourse (recode HADSEX=2)

Most recent partner:

If R's most recent partner was R's first partner ever  
(LIFEPR1=1 or MATCHFP=1 or p1yrelp=13 or (p1yrelp=7 and CG-2 SAMEMAN=1 and CA-1  
TIMESMAR=1) or (p1yrelp=8 and CG-2 SAMEMAN=1 and TIMESCOH=1) ):

PARTDUR1 = FPDUR

Else if R's most recent partner was not R's first partner ever (LIFEPR1>1 and p1yrelp NE 13):

If Blaise-computed variable cmfsex (Flow check C-77) not sysmis, 9998, or 9999 then:

If cmfsex=9996 then PARTDUR1=997

Else PARTDUR1 = (LSEXDATE minus cmfsex)

Second- and third- most recent partners:

PARTDUR2 is blank (inapplicable) if:

-- R has never had sexual intercourse (recode HADSEX=2), or if

-- R had no partners or only 1 partner (parts12 = 0 or 1) in the past 12 months

PARTDUR3 is blank (inapplicable) if:

-- R has never had sexual intercourse (recode HADSEX=2), or if

-- R had no partners, or only 1 or 2 partners (parts12 = 0, 1, or 2) in the past 12 months If

R's 2<sup>nd</sup> / 3<sup>rd</sup> most recent partner was R's first partner ever (p1yrelp2/3 = 13):

If cmlsexfp not sysmis, 9998, or 9999 and cmfstsex not sysmis, 9998, or 9999 then:

If cmlsexfp=9996 then PARTDUR1=997

Else PARTDUR2/3 = FPDUR

Else if R's most recent partner was not R's first partner ever (LIFEPR1>=2/3 and p1yrelp2/3 NE  
13):

If cmfsex2/3 not sysmis, 9998, or 9999 and cmlsex2/3 not sysmis, 9998, or 9999 then:

If cmfsex2/3=9996 then PARTDUR2/3=997

Else PARTDUR2/3 = (cmlsex2/3 minus cmfsex2/3)

*Imputation note:*      *Imputation needed if recode uses cmfsex / cmlsex; cmfsex2 / cmlsex2; or  
cmfsex3 / cmlsex3, and the relevant pair includes dk/rf. Imputation needed if  
cmlsex[n] is earlier than (less than) corresponding cmfsex[n]. (subtracting  
the dates yields a negative value)*

Code categories:

Blank =            Inapplicable

0 – nnn =        number of months

997 =            only had sex once with partner

**LSEXDATE##: “CM date of last or most recent sexual intercourse”**

LSEXDATE is blank (inapplicable) if R has never had sexual intercourse (recode HADSEX = 2).  
Otherwise:

LSEXDATE is determined by the most recent, or only, value on cmlsex (computed in Flow Check C-71) and cmfplast (computed in Flow Check C-57).

If cmlsex is blank and cmfplast is a valid date then LSEXDATE=cmfplast.

If cmfplast is a valid date and cmlsex is a valid date, LSEXDATE is the most recent one of the two.

Otherwise LSEXDATE=cmlsex.

*Imputation Note: Imputation needed if cmlsex is missing/dk/rf. Recode PARTSIYR is reconciled with LSEXDATE in cases where they are inconsistent. See recode specs and imputation notes for PARTSIYR.*

*Note: LSEXDATE only considers cmlsex (and cmfplast). In rare cases there is a date in cmlsex2 or cmlsex3 that is more recent. Regardless, all raw, computed, and recode variables on characteristics of last partner refer to the last partner based on cmlsex (or cmfplast), not cmlsex2 or cmlsex3. Recode NUMP3MOS (number of partners in the past 3 months) considers cmlsex, cmlsex2, and cmlsex3. For this reason, in rare cases, NUMP3MOS may be inconsistent with LSEXDATE. For 2017-2019, when the corresponding recode LSEXAGE has been bottomcoded at 10 for public use, values of LSEXDATE are coded as 9997 (not ascertained). The full-detail variable called INLSEXDATE is available through the NCHS Research Data Center.*

Code categories LSEXDATE (public-use variable):

Blank	= inapplicable
xxxx - 1437	= CM date of last or most recent sexual intercourse
9997	= not ascertained

Code categories INLSEXDATE (public-use variable):

Blank	= inapplicable
xxxx - 1437	= CM date of last or most recent sexual intercourse

**LSEXAGE##: “R’s age at last or most recent sexual intercourse”**

LSEXAGE is blank (inapplicable) if R has never had sexual intercourse (recode HADSEX = 2).

Otherwise:

LSEXRAGE = INT[(recode LSEXDATE) - cmbirth / 12]

*Note: Respondents aged 50 were 49 at time of household screener. For 2017-2019, the original LSEXRAGE recode, as defined above, was bottom-coded for public use at 10 to represent age 10 or younger. The full-detail variable called INLSEXRAGE is available through the NCHS Research Data Center.*

*Imputation Note: This recode is computed based on imputed values of the source recodes.*

Code categories LSEXRAGE (public-use variable):

Blank = inapplicable

10 = age 10 years or younger at last or most recent sexual intercourse

11 - 50 = age in years at last or most recent sexual intercourse

Code categories INLSEXRAGE (restricted-use variable):

Blank = inapplicable

xx - 50 = age in years at last or most recent sexual intercourse

**PARTS1YR\*\*:**            **“Number of opposite-sex sexual partners in last 12 months”**

PARTS1YR is blank (inapplicable) if R has never had sexual intercourse (recode HADSEX = 2).

Otherwise:

PARTS1YR is based on the value of computed variable parts12.

The sas program below

1) assigns 0 to PARTS1YR if parts12 was 9998 or 9999, because this is how they were routed in the questionnaire.

2) addresses cases that gave inconsistent information on whether they had sexual intercourse in the last 12 months in the directly asked questions about “numbers of partners” versus “dates of last sex with each recent partner.”

*SAS logic:*

```
IF HADSEX=2 THEN PARTS1YR=.;
IF PARTS12 IN (0,9998,9999) THEN PARTS1YR=0;
ELSE IF 1 LE PARTS12 LT 95 THEN PARTS1YR=PARTS12;
*** below: to address inconsistent cases between PARTS1YR & LSEXDATE;
IF PARTS1YR=0 and LSEXDATE GE (cmintvw - 11) then impute PARTS1YR;

ELSE IF PARTS1YR GE 1 and (-1 LT LSEXDATE LT (cmintvw - 11)) then
PARTS1YR=0; (see imputation note).
```

*User Notes: Male version of PARTS1YR is defined for all respondents, not just those with HADSEX=1. PARTS1YR is defined even if one or more of the dates are DK/RF. In other words, it is incremented for any valid date falling within the*

past 12 months. The original PARTS1YR recode, as defined above, was topcoded for public use at “7 or more opposite-sex partners”. The full-detail variable called INPARTS1YR is available through the NCHS Research Data Center.

*Imputation Note:* Needed for cases where PARTS1YR originally equals 0 but LSEXDATE is within 12 month window (LSEXDATE GE (cmintvw-11)).  
- Minimum value should be the number of dates falling within cmintvw-11, among: LSEXDATE, cmlsex2, and cmlsex3.  
- Maximum value should be LIFPRTNR.

Code categories PARTS1YR (public-use variable):

Blank = inapplicable

0 – 7 = 0 through 7 or more opposite-sex partners in last 12 months

Code categories INPARTS1YR (restricted-use variable) :

Blank = inapplicable

0 – nn = number of opposite-sex partners in last 12 months

**LIFPRTNR\*\*:** “Number of opposite-sex sexual partners in lifetime”

LIFPRTNR = lifeprts (*defined for all Rs*)

Values of Blaise-computed variable lifeprts are used to determine values of LIFPRTNR (see Flow Check C-83 for the full definition of lifeprts).

*(The lifeprts variable was based primarily on responses to CH-1 LIFEPR. If LIFEPR=DK or RF, lifeprts=CH-1b LIFEPR\_LO, which could have been answered with DK/RF. This would be the only way for lifeprts to be DK/RF.)*

SAS Logic:

If rhadsex=5 then LIFPRTNR=0;

Else if (1 <= LIFEPR <= 995) then LIFPRTNR=lifeprts;

Else if LIFEPR in(998,999) and (1 <= LIFEPR\_LO <= 995) then  
LIFPRTNR=LIFEPR\_LO;

*Imputation Note:* Needed if Blaise-computed lifeprts=DK/RF.

*Note:* The original LIFPRTNR recode, as defined above, was top-coded for public use at “50 or more opposite-sex partners.” The full-detail variable called INLIFPRTNR is available through the NCHS Research Data Center.

Code categories LIFPRTNR (public-use variable):

0 – 49 = number of opposite-sex partners in lifetime

50 = 50 or more opposite-sex partners in lifetime

Code categories INLIFPRTNR (restricted-use variable):

0 – xx = number of opposite-sex partners in lifetime

**NUMP3MOS\*\*:**        **“Number of male partners in past 3 months”**

NUMP3MOS is blank (inapplicable) if R has never had sexual intercourse (recode HADSEX=2).

Otherwise:

If R had no sex partners in the last 3 months (SEX3MO=2), then NUMP3MOS=0

Else if R had 1 or more sex partners in the last 3 months (SEX3MO=1), then:

For the dates to look at, for whether it falls in the past 3 months, if any of the partners was same as the first partner, or the first partner was same as cohabiting partner or husband already discussed and number of lifetime partners is > 1, use only the dates for the last 3 partners.

If CI-4 MATCHFP=1 or MATCHFP2=1 or MATCHFP3=1 or (CG-2 SAMEMAN=1 and LIFEPR>1) then use:

**cmlsex, cmlsex2, cmlsex3**

Else use:

**cmfplast, cmlsex, cmlsex2, cmlsex3**

The condition implicit in the above else statement is:

1) if none of the partners was the first partner, or  
2) first partner was same as husband/cohab, and only one partner in life,  
use the dates for the last 3 partners, plus the date for the first partner.

if

1) (CI-4 MATCHFP=5 or system-missing and MATCHFP2=5 or system-missing and MATCHFP3=5 or system-missing and CG-2 SAMEMAN =5 or system-missing) or

2) (CG-2 SAMEMAN=1 and LIFEPR=1)

If 1,2, or 3 partners in the past year (PARTS1YR<4) then do:

For each partner for whom the date of last sex is within past 3 months (computed variable for date, as defined above is GE cmintvw-2), increment NUMP3MOS by 1. (NUMP3MOS=1, 2, or 3)

Else if more than 3 partners in the last 12 months (PARTS1YR>=4) then:

For each partner with whom the date of last sex is within the past 3 months (computed variable for date, as defined above, is GE cmintvw-2), increment NUMP3MOS by 1 (NUMP3MOS=1, 2, or 3), except if all 3 partners fall within past 3 months, then NUMP3MOS=4.

Else, for each partner with whom the date of last sex (computed variables set as defined above) is within the past 3 (computed variable for date, as defined above, is GE cmintvw-2), increment NUMP3MOS by 1.

*User Notes:*

-- Computed variable **cmintvw** is defined in Flow Check A-1

-- Code categories:

*The questionnaire was designed to capture a maximum of 3 partners within the past year. Therefore for respondents who had 4 or more partners in the past year, there is some degree of unknown with respect to numbers of partners in the past 3 months. If all 3 partner slots are filled with dates in the past 3 months, there could have been one or more additional partners within the past 3 months, but this is not ascertainable. This is the reason for code category “4” and the distinction between categories 3 and 4.*

-- **NUMP3MOS** is defined even if one or more of the dates are “don’t know” or “refused.” In other words, **NUMP3MOS** is incremented for any valid date falling within the past 3 months.

-- **NUMP3MOS** can exceed **PARTSIYR**. This is because the R provided inconsistent information in the interview: Reported “1” to number of partners in the past year, but identified 2 dates of last sex within the past 3 months, and reported they were not the same partner).

*Imputation Note:* Computed based on imputed values of the source recodes.

Code categories:

Blank = Inapplicable  
0 = 0 partners  
1 = 1 partner  
2 = 2 partners  
3 = 3 partners exactly  
4 = 3, possibly more partners

**SEX3MO\*\***: “Intercourse in the past 3 months (including interview month) (based on last sexual partner date -- LSEXDATE)”

SEX3MO=blank (inapplicable) if recode HADSEX=no.

SEX3MO=1: if recode LSEXDATE is GE **cmintvw** minus 2

SEX3MO=2: if recode LSEXDATE is LT **cmintvw** minus 2

*Notes:* -- This recode is comparable to the male recode with the same name.

*-- SEX3MO only draws from cmlsex (and cmfplast). In rare cases SEX3MO might be “no” but dates on cmlsex2 or cmlsex3 are still within the past 3 months. This is because the order the R reported the partners in takes precedence over dates. The partner corresponding to cmlsex is considered to be the last partner, and it is this partner who is represented in “characteristics of last partner” variables/recodes.*

*Imputation Note:* Based on imputed values of source recode.

Code categories:

blank = Inapplicable

- 1 = Yes, had intercourse in the past 3 months (including interview month)  
2 = No, did not have intercourse in the past 3 months (including interview month)

### **Sections D and E:**

### **Sterilization, Impaired Fecundity, Contraceptive History & Pregnancy Wantedness**

**STRLOPER\*\*:** “Type of sterilization operation in effect”

*This recode specifies the type of sterilization operation “in effect” at the time of interview.*

- *For tubal sterilizations and vasectomies, the recode takes into account whether R or her current husband or cohabiting partner had a reversal operation.*
- *For cases where there were multiple operations, the recode assigns precedence to female operations and earlier operations.*
- *Operations other than tubal sterilization, vasectomy, hysterectomy, and removal of ovaries are counted as sterilization operations only if R said that she (or her current husband or cohabiting partner) was **completely sterile** as a result.*

#### ***STEP 1: Tubal Sterilization, Vasectomy, Hysterectomy, and Bilateral Ovary Removal***

- a) The computed variable **tubs**, defined in Flow Check D-22, indicates whether R is surgically sterile at time of interview, due to either an unreversed tubal sterilization or a reversal failure. Essure is included as a method of tubal sterilization.
- b) The computed variable **vasect**, defined in Flow Check D-22, indicates whether R’s current husband or cohabiting partner is surgically sterile at time of interview due to either an unreversed vasectomy or a reversal failure.
- c) The computed variable **hyst**, defined in Flow Check D-5, indicates whether R has ever had a hysterectomy.
- d) The computed variable **ovarem**, defined in Flow Check D-5, indicates whether R has ever had both ovaries removed, either in a single operation or more than 1 operation.

#### ***STEP 2: Other Sterilizing Operations***

- a) The computed variable **othr**, defined in Flow Check D-7, indicates whether R has ever had any other sterilizing operation, even if that was not its primary purpose.
- b) The variable **othrm**, defined in Flow Check D-7, indicates whether R’s current husband or cohabiting partner has ever had any other sterilizing operation, even if that was not its primary purpose.

### ***STEP 3: Overall Female and Male Surgical Sterilization Status***

- a) Blaise-computed variable **rsurgstr** indicates overall female surgical sterilization status at time of interview, taking into account whether her tubal sterilization was reversed. For further details, see Flow Check D-22.
- b) Blaise-computed variable **psurgstr** indicates overall surgical sterilization status of R's current husband or cohabiting partner, taking into account whether his vasectomy was reversed. This variable is set to "no" for Rs who are not currently married or cohabiting. For further details, see Flow Check D-22.

### ***STEP 4: Definition of STRLOPER***

- a) STRLOPER=5 (not surgically sterile) if neither R nor her current husband or cohabiting partner is "surgically sterile" at time of interview (rsurgstr = no and psurgstr = no).
- b) Else, if there is *only one sterilization operation* reported (Only 1 YES among TUBS, HYST, OVAREM, OTHR, VASECT, OTHRM), then:
  - 1. IF TUBS = YES THEN STRLOPER=1 (tubal sterilization)
  - 2. IF HYST = YES THEN STRLOPER=2 (hysterectomy)
  - 3. IF VASECT = YES THEN STRLOPER=3 (vasectomy)
  - 4. IF OVARM = YES OR OTHR = YES OR OTHRM = YES THEN STRLOPER=4 (other operation or type unknown)
- c) Else, if there are *two or more operations* reported (more than 1 YES among TUBS, HYST, OVAREM, OTHR, VASECT, OTHRM), then:

If there is a male operation reported (psurgstr = yes) and one or more female operations reported (rsurgstr = yes), then STRLOPER codes the earliest female operation.

*Dates* for sterilization operations are given in the following Blaise-computed variables:

cmtublig --	Tubal sterilization (including Essure)
cmhyst --	Hysterectomy
cmovarem --	Ovary removal
cmotsurg --	Other female sterilizing operation
cmmaleop --	Vasectomy or other male sterilizing operation

*Further criteria for determining which operation to code in STRLOPER:*

- If the date of one operation is missing and the date of the other operation is known, R is classified based on the operation with a known date.
- If the dates are the same for all operations and one of them is a hysterectomy (e.g., the woman has a hysterectomy and both ovaries removed in the same operation), STRLOPER is coded "hysterectomy."

- If the dates are missing for all female operations, if hysterectomy is one of the operations, and tubal sterilization is NOT among the operations, then STRLOPER is coded “hysterectomy.” However, if tubal sterilization is among the operations, STRLOPER is coded “tubal sterilization.”

*Imputation note: Due to defaulting to code 5, STRLOPER should not require imputation unless there is significant missing data. These cases will generally be logically imputed.*

Code categories:

- 1 = Tubal ligation or sterilization
- 2 = Hysterectomy
- 3 = Vasectomy
- 4 = Other operation or type unknown
- 5 = Not surgically sterile

**FECUND\*\*:** “Fecundity status”

*The FECUND recode describes the respondent’s ability to get pregnant and carry a baby to term. Women may be classified in one of the “non-fecund” categories if they are surgically sterile or if their fecundity is impaired in some other way.*

*Respondents are classified in hierarchical order, from codes 1 to 6, with 6 (fecund) being the residual category. For example, a respondent may fulfill the definition for “long interval without conception” but if she also fulfills the definition for “subfecund” she is classified as “subfecund.” The exception is that we begin by classifying all currently pregnant respondents as FECUND=6.*

*Note: A married or cohabiting respondent is considered “surgically sterile” based on sterilizing operations that either she had or her husband or partner had. In this respect, this recode for fecundity status is “couple-based.” If you wish to analyze a “woman-based” fecundity status, you can compute a comparable recode limited to female sterilizing operations, regardless of R’s marital or cohabitation status.*

**If R is currently pregnant and her husband/partner is not surgically sterile (recode RCURPREG = 1 and recode STRLOPER = 5), then FECUND=6.**

**ELSE:**

**If R has reported a sterilization “in effect” at interview (STRLOPER NE 5), then she is classified as surgically sterile (FECUND=1 or FECUND=2), based on the contraceptive intent of the sterilization operation.**

Contraceptive intent is defined for the operation that is coded in STRLOPER because this recode has already assigned priority in cases of multiple sterilizing operations. (Reasons for the operation were asked only if the operation occurred within the past 5 years.)

*Female “reasons for the operation” variables:*

DB-3a RHADALLx - codes whether R had had all the children she wanted  
 DB-3b HHADALLx -codes whether her current husband/partner had had all the children he wanted  
 DB-4 FMEDREASx -allows coding for up to 5 medical reasons for operation  
 DB-5a BCREASx - codes whether R had reasons related to birth control methods  
 DB-5b BCWHYFx - codes whether BC reasons were health-related or other

*Because up to 4 female sterilization operations could be reported, there are 4 clusters of the above variables, and each is reserved for a particular type of operation:*

- 1<sup>st</sup> cluster - tubal sterilization (including Essure)
- 2nd cluster - hysterectomy
- 3rd cluster - ovary removal
- 4th cluster - “other female sterilizing operation.”

*Only 1 male sterilization operation could be reported, and the “reasons for operation” variables are:*

DB-11a RHADALLM - codes whether R had had all the children she wanted  
 DB-11b HHADALLM - codes whether her current husband/partner had had all the children he wanted  
 DB-12 MEDREASx - allows coding for up to 5 medical reasons for operation  
 DB-13a BCREASM - codes whether R had reasons related to birth control methods  
 DB-13b BCWHYM - codes whether BC reasons were health-related or other

***FECUND=1 (Surgically Sterile, Contraceptive):***

If it is impossible for R or her husband/partner to have a(nother) baby because of a sterilizing operation that was done, at least in part, for contraceptive reasons, then she is *surgically sterile for contraceptive reasons* and FECUND=1.

A female operation is defined as having *contraceptive intent*:

- if R reported any reasons other than “medical reasons” (DB-3a RHADALL=1 or DB-3b HHADALL=1 or DB-5a BCREAS=1) **OR**
- if she only reported “medical reasons” but none of them were “medical problems with female organs” [(DB-3a RHADALL NE 1 and DB-3b HHADALL NE 1 and DB-5a BCREAS ne1 and DB-4 FMEDREAS(1st mention) NE 6, DK, or RF) and (none of the 5 mentions for DB-4 FMEDREAS include code 1)].

Similarly, a male operation is defined as having *contraceptive intent*:

- if R reported any reasons other than “medical reasons” (DB-11a RHADALLM=1 or DB-11b HHADALLM=1 or DB-13a BCREASM=1) **OR**
- if she only reported “medical reasons” but none of them were “pregnancy would be dangerous for your health” [(DB-11a RHADALLM NE 1 and DB-11b HHADALLM NE 1 and DB-13a BCREASM NE 1 and DB-12 MEDREAS(1st mention) NE 6, DK, or RF) and (none of the 5 mentions for DB-12 MEDREAS include code 1)].

***FECUND=2 (Surgically Sterile, Noncontraceptive):***

If it is impossible for R or her husband/partner to have another baby because of a sterilizing operation that was ONLY done for NONcontraceptive reasons, then she is *surgically sterile for noncontraceptive reasons* and FECUND=2.

A female operation is defined as having *solely non-contraceptive intent* if R ONLY cited “medical reasons” (DB-3a RHADALL NE 1 and DB-3b HHADALL NE 1 and DB-5a BCREAS ne1 and DB-4 FMEDREAS(1st mention) NE 6, DK, or RF) AND the specific medical reasons cited in DB-4 FMEDREASx includes “medical problems with your female organs.”

Similarly, a male operation is defined as having *solely non-contraceptive intent* if she only reported “medical reasons” but at least one of them was “pregnancy would be dangerous for your health” [(DB-11a RHADALLM NE 1 and DB-11b HHADALLM NE 1 and DB-13a BCREASM NE 1 and DB-12 MEDREAS(1st mention) NE 6, DK, or RF) and (any of the 5 mentions for DB-12 MEDREAS include code 1)].

***If reasons for STRLOPER operation are missing (either due to DK/RF responses or because the operation did not occur since January of 5 years before interview (cmjan5yr), then FECUND may still be coded 1 or 2, based on the following assumptions:***

If STRLOPER NE 5 and reasons for the operation coded in STRLOPER are missing (all “reasons” variables are GE 97), then:

- IF STRLOPER=1 THEN FECUND=1 (assume tubal sterilizations are contraceptive)
- IF STRLOPER=2 THEN FECUND=2 (assume hysterectomies are non-contraceptive)
- IF STRLOPER=3 THEN FECUND=1 (assume vasectomies are contraceptive)
- IF STRLOPER=4 THEN FECUND=2 (assume “other operations” are non-contraceptive)

**The remaining categories of FECUND are limited to respondents who are not surgically sterile at interview (STRLOPER EQ 5), and are defined in the order shown below. (Note: This means, for example, that a respondent who fulfills the definition of FECUND=4 and FECUND=5 will get coded as FECUND=4.)**

***FECUND=3 (Nonsurgically Sterile):***

If R reports that it is impossible for her to have a(nother) baby for reasons other than surgical sterilization (DE-1 POSIBLPG=5) or for her husband or cohabiting partner to father a(nother) baby (DE-3 POSIBLMN=5), then she is *nonsurgically sterile* and FECUND=3.

***FECUND=4 (Subfecund):***

If R reports that it is difficult for her, and/or her current husband, to conceive or deliver a(nother) baby (DF-1 CANHAVER=1 OR DF-3 CANHAVEM=1), OR if a medical doctor advised her

NEVER to become pregnant (again) (DF-4 PREGNONO=1), then she is *subfecund* and FECUND=4.

**FECUND=5 (Long Interval Without Conception):**

If, during the 36 months or more of continuous marriage or cohabitation prior to interview, R did not have a pregnancy, used no contraception, and had no months of non-intercourse, she is classified as having a *long interval without conception*.

*Must first define intermediate variables for “any method use in last 36 months” and “any months of non-intercourse in last 36 months”:*

- To define **ANYBC36** (any contraceptive use in last 36 months), check array of method calendar variables for contraceptive use in the 36 months preceding the interview. METHX1 through METHX192 contain contraceptive method(s) used, if any, for each of (up to) 48 months prior to and including the interview month. Check each one within the time frame [cmintvw minus 36] through cmintvw. If any of them = 3-21 or 25-26 (see ED-6 METHHIST in the CAPI reference questionnaire) then a contraceptive method was used.

ANYBC36 = 1 (“yes, at least one month of reported method use”)  
if R reported any method use in the last 36 months (ED-6 METHHIST >=3 and <=21 or =25, 26)

Else

ANYBC36 = 2 (“no, no months of method use – nothing used in all months”) If R reported “1” -”none” or system-missing in all months (all system-missing means everused=5)\*  
or R reported don’t know or refused (98, 99) in any of the 36 months (and reported no months of method use).

\*If everused is system-missing or “7” then method use was not ascertained so ANYBC36 cannot be ascertained and remains 2.

- To define **NOSEX36** (any months of non-intercourse in last 36 months), check values of EC-8 MONSX[nnnn] through MONSX[nnnn-36], where nnnn=cmintvw.

NOSEX36 = 2 (yes, one or more months of nonintercourse)  
if R reported any months of non-intercourse in any of the last 36 months (any occurrence of code 5 or system-missing or don’t know or refused)

Else

NOSEX36 = 1 (no, no months of **non-intercourse** – intercourse in all months)  
if R reported intercourse in all 36 months (code 1) and no missing values in the 36 months (don’t know or refused (8,9), or system-missing)

Once these 2 intermediate variables are defined, proceed as follows:

- (a) if the interval between the date of interview and the date when R began living with her

current husband/cohabiting partner is 36 months or more and if there were no months of nonintercourse reported in the 36 months prior to interview:

If ((cmintvw - cmstrthp) GE 36)

AND No months of nonintercourse in 36 months prior to interview  
(NOSEX36=NO)

Continue with step (b).

(Blaise-computed cmstrthp indicates century-month when R began living with current husband or cohabiting partner.)

(b) (1) If R has:

Never been pregnant (recode PREGNUM = 0) and  
Had sexual intercourse since menarche (recode SEXEVER = 1) and  
Never used a contraceptive method (recode ANYMTHD = NO),

THEN R has a long interval (FECUND = 5).

(2) If R has:

Never been pregnant (PREGNUM = 0) and  
Had sexual intercourse since menarche (SEXEVER = 1) and  
Ever used a contraceptive method (ANYMTHD = 1),

THEN if R has NOT used any contraceptive during the past 36 months  
(ANYBC36=NO), then R has a long interval (FECUND = 5).

(3) If R has:

Ever been pregnant (PREGNUM GE 1) but is not currently  
pregnant (recode RCURPREG=NO)

THEN:

If her last pregnancy ended at least 36 months prior to interview [(cmintvw  
- cmlstprg) GE 36] and R never used a method in the last 36 months  
(ANYBC36=NO),

THEN R has a long interval and FECUND=5.

***FECUND=6 (Fecund):***

If R has not been classified thus far, she is considered *fecund* (the residual category) and  
FECUND=6.

*User Note:* The 2 intermediate variables defined for computation of FECUND are included on  
the public-use data file -- ANYBC36 & NOSEX36.

*Imputation note:* Due to defaulting to code 6, FECUND should not require imputation unless  
there is significant missing data. These cases will generally be logically  
imputed.

Code categories:

- 1 = Surgically Sterile, Contraceptive
- 2 = Surgically Sterile, Noncontraceptive
- 3 = Sterile, Nonsurgical
- 4 = Subfecund
- 5 = Long interval
- 6 = Fecund

**INFERT\*\*:**            **“Infertility status”**

*Infertility is defined as 12 or more months of intercourse without pregnancy and without contraception. The INFERT recode is defined for respondents who are currently married or cohabiting.*

INFERT is blank (inapplicable) if R is not currently married or cohabiting (recode RMARITAL NE 1 or 2).

**FOR ALL RESPONDENTS WHO ARE CURRENTLY MARRIED OR COHABITING**  
(RMARITAL=1 or 2):

- (1) If R or her husband/partner is surgically sterile (recode STRLOPER NE 5), then INFERT=1 (surgically sterile).
- (2) If R has never had a menstrual period (BA-1 MENARCHE = 96), then INFERT=2 (infertile). (Recall that this recode is only defined for currently married or cohabiting women, so this would be quite rare and probably indicative of a fertility problem.)
- (3) If R is currently pregnant (recode RCURPREG EQ YES) or if she has had a month or more of nonintercourse in the 12 months prior to interview (0 < recode NOSEX12 < 95), then INFERT=3 (fecund).
- (4) If R has used a method at all in the 12 months prior to interview (ANYBC12=YES), then INFERT=3 (fecund).
  - To define **ANYBC12** (any contraceptive use in last 12 months), check array of method calendar variables for contraceptive use in the 12 months preceding the interview. METHX1 through METHX192 contain contraceptive method(s) used, if any, for each of (up to) 48 months prior to and including the interview month. Check each one within the time frame [cmintvw minus 12] through cmintvw. If any of them = 3-21 or 25-26 (see ED-6 METHHIST in the CAPI reference questionnaire) then a contraceptive method was used.
 

ANYBC12 = 1 (“yes, at least one month of reported method use”)  
if R reported any method use in the last 12 months (ED-6 METHHIST >=3 and <=21 or =25, 26)

Else

ANYBC12 = 2 (“no, no months of method use – nothing used in all months”)  
If R reported “1” -”none” or system-missing in all months (all system-

missing means everused=5)\*

or R reported don't know or refused (98, 99) in any of the 12 months (and reported no months of method use).

\*If everused is system-missing or "7" then method use was not ascertained so ANYBC12 cannot be ascertained and remains 2.

- (5) If, during the 12 months or more of continuous marriage/union with no months of nonintercourse, the couple did not have a pregnancy and used no contraception, R is considered infertile (INFERT=2). That is,
- (a) If R has been in her current marriage or cohabiting union for 12 months or more [(cmintvw - cmstrthp) GE 12] and there were no months of nonintercourse reported in those 12 months (NOSEX12=0), continue with step 5b. (*Blaise-computed cmstrthp indicates century-month when R began living with current husband or cohabiting partner.*)
- (b) R is classified as follows:
- 1) If R has never been pregnant (recode PREGNUM=0) and never used a method since first intercourse (recode ANYMTHD=NO), then R is considered infertile and INFERT=2.
  - 2) If R has never been pregnant (PREGNUM=0) and EVER used a method since first intercourse (ANYMTHD=YES), then:  
If R has not used a contraceptive method in the past 12 months (ANYBC12=NO), then R is considered infertile and INFERT=2.
  - 3) If R has ever been pregnant (PREGNUM GE 1), and there have been at least 12 months since her last pregnancy ended ((cmintvw - cmlstprg) GE 12), and R has not used any contraceptive methods in last 12 months (ANYBC12=NO), then R is considered infertile, and INFERT=2.  
*(Blaise-computed cmlstprg, defined in Flow Check B-42d, indicates century-month when R's last completed pregnancy ended.)*
- Note: As with FECUND's "long interval" classification, some respondents classified as "infertile" based on having no pregnancies in the 12 months prior to interview, could have reported an abortion in the Audio-CASI portion of the interview.*
- (6) If extensive missing data made a case bypass steps 1-5 above, then:
- (a) If the 4 method calendar variables corresponding to the month of interview show method use other than female or male surgical sterilization (ED-6 METHHISTxxx include only codes 3, 4, 7-21, 25, 26), then R is considered fecund and INFERT=3. (*There should be no married/cohabiting cases with METHHISTnnnn codes of 5 or 6 in month of interview who don't also have recode STRLOPER NE 5.*)

- (b) If there is still too much missing data to classify R, the case needs to be examined by NCHS and ISR staff and imputed if necessary. Unless there is evidence to the contrary, such cases are generally assumed to be fecund and INFERT=3.

*User Note:* The intermediate variable (ANYBC12) defined for computation of INFERT is included on the public-use data file.

*Imputation note:* Due to defaulting to code 3, INFERT should not require imputation unless there is significant missing data. These cases will generally be logically imputed.

Code categories:

- Blank = Inapplicable
- 1 = Surgically sterile
- 2 = Infertile
- 3 = Fecund

**ANYMTHD\*\*:** “Ever used any method for any reason”

If (computed variable everused=yes) or (DA-1 EVERTUBS=1 or 6) or (DA-9 WHATOPSM=1 or 6) then ANYMTHD=1.

Otherwise, if everused=no and (DB-1 EVERTUBS NE 1 and NE 6) and (DB-9 WHATOPSM NE 1 and NE 6) then ANYMTHD=2.

*Note:* Since this is meant to capture method use for any reason, and method use by those planning to have intercourse, those who never had intercourse are not excluded.

Code categories:

- 1 = Yes
- 2 = No

**NOSEX12\*\*:** “Number of months of nonintercourse in the 12 months prior to interview”

If R never had intercourse (recode HADSEX = 2), then NOSEX12=95.

If R has had no months of nonintercourse since cmjan3yr (January of year of interview minus 3) (EC-3 INTR-EC3 =5)

and date of first sex was earlier than or equal to 12 months prior to interview, (cmfstsex LE (cmintvw-11)),  
or date of first sex is unknown (cmfstsex=9998 or 9999)  
Then NOSEX12=0

Else if R has had no months of nonintercourse since cmfstsex (EC-3 INTR-EC3=5)

and date of first sex was within the 12 months prior to interview, (cmfstsex GT cmintvw-11), then NOSEX12=the number of months between 12 months prior to the interview, and first sex (cmfstsex - (cmintvw-11)).

Else if R has had one or more months of nonintercourse since cmjan3yr (January of year of interview minus 3) (EC-3 INTR-EC3=1):

and date of first sex was earlier than or equal to 12 months prior to interview, (cmfstsex LE (cmintvw-11)),

Count the months of nonintercourse (5) in the 12 months prior to interview (using EC-8 MONSXnn through MONSXnn-11, where nn corresponds to the MONSX for the month of interview) and sum to create total number of months

Else if R has had one or more months of nonintercourse since cmfstsex (EC-3 INTR-EC3=1): and date of first sex was within the 12 months prior to interview, (cmfstsex GT cmintvw- 11), Count the months of nonintercourse (5) in the 12 months prior to interview (using EC-8 MONSXnn through MONSXnn-11, where nn corresponds to the MONSX for the month of interview) and sum to create total number of months

Else if R reported “don’t know” or “refused” to whether one or more months of nonintercourse since cmjan3yr / cmfstsex, (EC-3 INTR-EC3=8 or 9) but there are valid responses in MONSXnn through MONSXnn-11:

Count the months of nonintercourse (5) in the 12 months prior to interview (using EC-8 MONSXnn through MONSXnn-11, where nn corresponds to the MONSX for the month of interview) and sum to create total number of months

Else if first sex was same as interview month (EC-3 INTR\_EC3=. and cmintvw=cmfstsex) then NOSEX12=11

Code categories:

00-12 = Number of months of nonintercourse  
95 = Never had intercourse

**SEXP3MO\*\*:** “Intercourse in the past 3 months (including interview month) (based on nonintercourse series (EC))”

SEXP3MO=blank (inapplicable) if recode HADSEX=no.

SEXP3MO=1:

- if R has had no periods of non-intercourse since [year of interview minus 3] (or first sex) (EC-3 INTR-EC3 = 5 or (EC-3 INTR-EC3=blank and cmfstsex=cmintvw))
- if R reported intercourse in any of the two months prior to interview month or in interview month, (EC-8 MONSX[nnnn], or EC-8 MONSX[nnnn]-1 = 1, or EC-8 MONSX[nnnn]-2=1, where nnnn=CM of interview)

SEXP3MO=2:

- if R reported no intercourse in interview month and the two months prior to interview month, (EC-8 MONSX[nnnn] = 5 and EC-8 MONSX[nnnn]-1 = 5, and EC-8 MONSX[nnnn]-2=5, where nnnn=CM of interview)

Code categories:

- Blank = Inapplicable
- 1 = Yes, had intercourse in past 3 months (including interview month)
- 2 = No, did not have intercourse in past 3 months (including interview month)

**CONSTAT1\*\*:**        **“Current contraceptive status”**

*This recode is designed to show current contraceptive status as used in all NSFG file releases since 1982. It refers to the method used in the month of interview, or “current month.” In cases where multiple methods were used in the current (interview) month, CONSTAT1 codes the HIGHEST priority method reported, according to a predetermined ranking of use-effectiveness, as used in earlier NSFG cycles. Up to four methods for the current month are ranked; the second, third, and fourth highest priority methods are coded in CONSTAT2- CONSTAT4, respectively. (See specifications that follow CONSTAT1.)*

Code categories for CONSTAT1 are arranged below to distinguish contraceptors from noncontraceptors for analytic purposes.

**Using Contraception:**

- 01= Female sterilization
- 02= Male sterilization
- 03= Hormonal implant
- 05= Depo-Provera (injectable)
- 06= Pill
- 07= Contraceptive Patch
- 08= Contraceptive Ring
- 09= Emergency contraception
- 10= IUD
- 11= Diaphragm (with or w/out jelly or cream)
- 12= (Male) Condom
- 13= Female condom/vaginal pouch
- 14= Foam
- 15= Cervical Cap
- 16= Today(TM) Sponge
- 17= Suppository or insert
- 18= Jelly or cream (not with diaphragm)
- 19= Periodic abstinence: NFP, cervical mucus test or temperature rhythm
- 20= Periodic abstinence: calendar rhythm
- 21= Withdrawal
- 22= Other method

**Not using contraception:**

- 30= Pregnant
- 31= Seeking Pregnancy
- 32= Postpartum
- 33= Sterile--nonsurgical--female
- 34= Sterile--nonsurgical--male
- 35= Sterile--surgical--female (noncontraceptive)
- 36= Sterile--surgical--male (noncontraceptive)
- 37= [code not used]
- 38= Sterile--unknown reasons --male
- 39= [code not used]
- 40= Other nonuser--never had intercourse since first period
- 41= Other nonuser--has had intercourse, but not in the 3 months prior to interview
- 42= Other nonuser--had intercourse in the 3 months prior to interview
- 88= inapplicable (no 2nd, 3rd, or 4th method reported -- applies to CONSTAT2-CONSTAT4 only)

If R is pregnant at interview (RCURPREG=YES), then CONSTAT1=30.

Else, if R or her current husband or cohabiting partner is surgically sterile at interview (STRLOPER NE 5)

Or she reported any sterilizing operation in the method history calendar:

CONSTAT1=01 (sterile--surgical--female):

If FECUND=1 and (STRLOPER in(1,2) or (STRLOPER=4 and rsurgstr=yes))  
or

If FECUND NE 3 and (ED-6 METHHISTnnn-METHHISTnnnn+4 for month of interview = 6)

Else CONSTAT1=35 (sterile --surgical—female (noncontraceptive))

If FECUND=2 and (STRLOPER in(1,2) or (STRLOPER=4 and rsurgstr=yes))

Else CONSTAT1=02 (sterile--surgical--male):

If FECUND=1 and (STRLOPER=3 or (STRLOPER=4 and psurgstr=yes))  
or

If (ED-6 METHHISTnnn-METHHISTnnnn+4 for month of interview = 5)

Else CONSTAT1=36 (sterile--surgical—male (noncontraceptive)):

If FECUND=2 and (STRLOPER=3 or (STRLOPER=4 and psurgstr=yes))

Else, if R is nonsurgically sterile (FECUND=3 and DE-1 POSIBLPG=5), then

CONSTAT1=33 (sterile--nonsurgical--female)

Else, if R's current husband or partner is nonsurgically sterile (FECUND=3 and DE-3 POSIBLMN=5), then

CONSTAT1=34 (sterile--nonsurgical--male)

Else,

If R is using any method in the month of interview, (ED-6 METHHISTnnn for month of interview)\* NE 1 and NE system-missing (inapplicable)):

*\*[only need to check the first METHHIST variable because looking for “no method”]*

If R is using only 1 method, CONSTAT1=this method,

CONSTAT1=(ED-6 METHHISTnnn for month of interview)

If R is using 2 or more methods:

CONSTAT1= method in (ED-6 METHHISTnnn - METHHISTnnn+4 for month of interview) with the highest priority (see table below).

The table below lists methods in order of priority (from highest to lowest) and gives the code equivalents for ED-6 METHHIST and CONSTAT1.

	Code in <u>METHHIST:</u>	CONSTAT1 <u>CODE</u>
Female sterilization	06	01
Respondent sterile (not on card)	22	33
Male sterilization	05	02
Partner sterile(not on card)	23	38
Hormonal implant	09	03
IUD	19	10
Depo-Provera injectable	08	05
Pill	03	06
Contraceptive patch	25	07
Contraceptive ring	26	08
Emergency contraception	20	09
(Male) condom	04	12
Diaphragm	12	11
Female condom/vaginal pouch	13	13
Today (TM) Sponge	18	16
Cervical cap	16	15
NFP, Temperature rhythm	11	19
Calendar rhythm	10	20
Withdrawal	07	21
Foam	14	14
Suppository or insert	17	17
Jelly or cream alone	15	18
Other method	21	22

-----

Else, if R is seeking pregnancy (EH-1 WYNOTUSE =1 or EH-2 HPPREGQ =1):

CONSTAT1=31.

Else, if R is postpartum, as defined by:

- Interview Date (Month/Day/Year of interview) is before the 15th day of the month, and the difference between the interview month (**cmintvw**) and the month of the last pregnancy termination (computed variable **cmlstprg**) is less than or equal to 2 months, or
- Interview date (Month/Day/Year of interview) is on or after the 15th day of the month and the difference between the interview month (**cmintvw**) and the month of the last pregnancy termination (computed variable **cmlstprg**) is less than or equal to 1 month.  
then

CONSTAT1=32

*Note: Computed variable **cmlstprg** is defined in Flow Check B-42d in the CAPI Reference Questionnaire.*

Else, if R never had intercourse since her first menstrual period (SEXEVER=2), then

CONSTAT1=40

Else, if (ED-6 METHHISTnnn for month of interview)=1 (no method used), or ANYMTHD=2 (never used a method) then:

CONSTAT1=41      If R had no intercourse in the 3 months prior to interview  
(SEXP3MO=2)

CONSTAT1=42      If R had intercourse in the 3 months prior to interview  
(SEXP3MO=1)

**CONSTAT2\*\*:**      **“2nd priority code for current contraceptive status”**

If CONSTAT1=1 and R reported any male sterilization operation (psurgstr=1 or any code 5 in METHHISTnnn vars for month of interview), then:

CONSTAT2=02 (sterile--surgical--male):  
    If FECUND=1 and (STRLOPER=3 or (STRLOPER=4 and psurgstr=yes))  
    or  
    If (ED-6 METHHISTnnn-METHHISTnnnn+4 for month of interview = 5)

Else, CONSTAT2=36 (sterile--surgical—male (noncontraceptive)):  
    If FECUND=2 and (STRLOPER=3 or (STRLOPER=4 and psurgstr=yes))

Else, if R is nonsurgically sterile (FECUND=3 and DE-1, POSIBLPG=5), then

CONSTAT2=33 (sterile--nonsurgical--female)

Else, if R’s current husband or partner is nonsurgically sterile (FECUND=3 and DE-3, POSIBLMN=5), then

CONSTAT2=34 (sterile--nonsurgical--male)

Else If R is using a method in the month of interview, (ED-6 METHHISTnnn-METHHISTnnnn+4 for month of interview) NE 1 and NE system-missing and NE 6 (female sterilization already captured in CONSTAT1):

If R is using ONE method, CONSTAT2=this method.

If R is using more than 1 method,

CONSTAT2= method in (ED-6 METHHISTnnn - METHHISTnnnn+4 for month of interview) with the highest priority (see table above in CONSTAT1).

Code categories:

See CONSTAT1

**CONSTAT3\*\*:**        **“3rd priority code for current contraceptive status”**

If R is using a method in the month of interview, (ED-6 METHHISTnnn-METHHISTnnnn+4 for month of interview) NE 1 and NE system-missing and NE 6 (female sterilization already captured in CONSTAT1):

If R is using ONE method, CONSTAT3=this method.

If R is using more than 1 method,

CONSTAT3= method in (ED-6 METHHISTnnn - METHHISTnnnn+4 for month of interview) with the next highest priority (see table above in CONSTAT1).

The code categories and specifications for CONSTAT3 are the same as for CONSTAT2. If CONSTAT1 is imputed, then CONSTAT3 is also imputed. If CONSTAT1 does not need imputation and there is no third method reported in (ED-6 METHHISTnnn - METHHISTnnnn+4 for month of interview), then CONSTAT3=88 (inapplicable).

Code categories:

See CONSTAT1

**CONSTAT4\*\*:**        **“4th priority code for current contraceptive status”**

If R is using a method in the month of interview, (ED-6 METHHISTnnn-METHHISTnnnn+4 for month of interview) NE 1 and NE system-missing and NE 6 (female sterilization already captured in CONSTAT1):

If R is using ONE method, CONSTAT4=this method.

If R is using more than 1 method,

CONSTAT4= method in (ED-6 METHHISTnnn - METHHISTnnnn+4 for month of interview) with the next highest priority (see table above in CONSTAT1).

The code categories and specifications for CONSTAT4 are the same as for CONSTAT2. If CONSTAT1 is imputed, then CONSTAT4 is also imputed. If CONSTAT1 does not need imputation and there is no fourth method reported in (ED-6 METHHISTnnn -

METHHISTnnnn+4 for month of interview), then CONSTAT4=88 (inapplicable).

Code categories:

See CONSTAT1

**PILLR\*\*:** “Ever used the pill for any reason”

PILLR=1 if:

- R has ever used the pill (EA-1 PILL=1); or
- R says she never used the pill (EA-1 PILL=5) but the pill was:
  - One of the methods stopped due to dissatisfaction (EA-17 METHSTOP=3)
  - Her first method ever (EB-1 FIRSMETH1-FIRSMETH4=3),
  - or her method at first intercourse (any of computed variables **mthfstx1 – mthfstx4=3**),
  - or the last method she used before a pregnancy (EG-4 WHATMETH1-WHATMETH80=3),
  - or a method she used sometime during the last 4 years (ED-6 METHX1-METHX192=3),or the method she used at last or first intercourse with partner(s) in past 12 months (EF-2 LSTMTHP1-LSTMTHP4=3 or LSTMTHP5-LSTMTHP8=3 or LSTMTHP9-LSTMTHP12=3 or FSTMTHP1-FSTMTHP4=3 or FSTMTHP5-FSTMTHP8=3 or FSTMTHP9-FSTMTHP12=3).

Else if none of the above indicated pill use and EA-1 PILL=5 then PILL=2.

*Imputation Note: PILLR is imputed if [EA-1 PILL is missing (DK or RF) and if (mthfstx1-4, EB-1, EG-4, ED-6, and EF-2) are all missing (DK or RF) or not equal to the pill].*

*Notes: Computed variables mthfstx1-4 are defined in Flow Check E-18 and Flow Check E-32 in the CAPI Reference Questionnaire. Since this is meant to capture pill use for any reason, and pill use by those planning to have intercourse, those who never had intercourse are not excluded.*

Code categories:

1=Yes

2=No

**CONDOMR\*\*:** “Ever used a condom”

CONDOMR=blank (inapplicable) if R has never had intercourse (recode HADSEX=no).

CONDOMR=1 if:

- R has ever used condoms for any reason (EA-2 CONDOM=1); or
- R says she has never used condoms (EA-2 CONDOM=5) but the condom was:

- One of the methods stopped due to dissatisfaction (EA-17 METHSTOP=4)  
 Her first method ever ( EB-1 FIRSMETH1-FIRSMETH4=4),  
 or her method at first intercourse (any of computed variables **mthfstsx1 – mthfstsx4=4**),  
 or the last method she used before a pregnancy (EG-4 WHATMETH1-WHATMETH80=4),  
 or a method she used sometime during the last 4 years (ED-6 METHX1-METHX192=4),  
 or the method she used at last or first intercourse with partner(s) in past 12 months (EF-2 LSTMTHP1-LSTMTHP4=4 or LSTMTHP5-LSTMTHP8=4 or LSTMTHP9-LSTMTHP12=4 or FSTMTHP1-FSTMTHP4=4 or FSTMTHP5-FSTMTHP8=4 or FSTMTHP9-FSTMTHP12=4).

Else if none of the above indicated condom use and EA-2 CONDOM=5 then CONDOMR=2.

*Imputation note: CONDOMR is imputed if [EA-5 CONDOM is missing (DK or RF) and if (mthfstsx1-4, EB-1, EG-4, ED-6, and EF-2) are all missing (DK or RF) or not equal to the condom].*

*Note: Computed variables mthfstsx1-4, are defined in Flow Check E-18 and Flow Check E-32 in the CAPI Reference Questionnaire*

Code categories:

Blank = Inapplicable  
 1 = Yes  
 2 = No

**SEX1MTHD1\*\*:** “Method used at first intercourse, if any-1st method”

SEX1MTHD1=blank (inapplicable) if R has never had intercourse (recode HADSEX=2).

SEX1MTHD1=95: if R has never used a method (recode ANYMTHD=2).

SEX1MTHD1=96: if R did not use a method at first intercourse (computed variable **usefstsx=5**)

Otherwise,

SEX1MTHD1=(computed variable mthfstsx1) (subtract 2 from the mthfstsx1 value to result in the correct values on SEX1MTHD)

Impute if missing (DK or RF):

- The 1st method ever used is missing (EB-1 FIRSMETH=DK or RF)
- The timing of first use is missing (EB-2 FIRTIME1/FIRTIME2=DK or RF)
- The method used at first intercourse (for those whose 1st method use was before 1st sex) is missing (EB-8 MTHFRSTS=DK or RF)

Note: Computed variables *usefstsx* and *mthfstsx1* are defined in Flow Check E-18, Flow Check E-29 and Flow Check E-32 in the CAPI Reference Questionnaire.

*Imputation Note:* Cases with *FIRSTIME2=1* (first method use was before first sex), but date of first method use greater than date of first sex, are imputed. In those cases, use *FIRSMETH1* to guide or determine imputed value.

Code categories:

- Blank= inapplicable
- 1= Pill
- 2= Condom
- 3= Partner's vasectomy
- 4= Female sterilizing operation/tubal ligation
- 5= Withdrawal
- 6= Depo-Provera, injectables
- 7= Hormonal implant
- 8= Rhythm or safe period by calendar
- 9= Safe period by temperature or cervical mucus test
- 10= Diaphragm
- 11= Female condom, vaginal pouch
- 12= Foam
- 13= Jelly or cream
- 14= Cervical cap
- 15= Suppository, insert
- 16= Today<sup>tm</sup> sponge
- 17= IUD, coil, loop
- 18= Emergency contraception
- 19= Other method
- 20= Respondent sterile (aside from sterilizing operation above)

FMETHOD2-4=inapplicable (blank) if:

- R has never used a method, including surgical sterilization (computed variable ANYMTHD=2 and DB-9 WHATOPSM NE 2).
- R did not use a 2nd/3rd/4th method the first time she used a method.

FMETHOD2-4=EB-1 FIRSMETH2/3/4 (subtract 2 from value for FIRSMETH2-4 to arrive at proper value for FMETHOD2-4)

Code categories:

See FMETHOD1

**DATEUSE1\*\*:**      **“Date R used first method for the first time”**

DATEUSE1= inapplicable (BLANK) if:

- R has never had intercourse (HADSEX=2); or
- R has never used a method, including sterilization of R or current husband/partner (computed variable ANYMTHD=2).

DATEUSE1=(computed variable **cmfirm**)

The following estimation procedure should be used for cases with inconsistent responses, described below, to

- 1) EB-2 FIRSTIME1/FIRSTIME2 with respect to
- 2) cmfstuse / cmfstsex

(note: such inconsistency could have resulted by overriding EDIT CHECK EB3\_7 or EB3\_8)

If R has used a method (everused=1 or DA-1 EVERTUBS=1, 4, or 6 or DA-9 WHATOPSM=1, 2, or 6) and if there is a valid date for cmfirm and cmfstsex (cmfirm/cmfstsex NE “DK/RF”)

- and she used her first method after her first intercourse (EB\_2 FIRSTIME1/FIRSTIME2=3,4,5 or 6) , BUT her date of first method use is before the date of first intercourse (computed variable **cmfirm** < computed variable **cmfstsex**), then DATEUSE1 is estimated using the *midpoint* of the time interval (EB\_2 FIRSTIME1/FIRSTIME2) plus cmfstsex
- and she used her first method at her first intercourse (EB\_2 FIRSTIME1/FIRSTIME2=2), BUT her date of first method use is before or after the date of first intercourse (computed variable **cmfirm** < computed variable **cmfstsex** or **cmfirm** > **cmfstsex**), then change DATEUSE1 to cmfstsex.

The midpoints of the intervals are estimated by:

- If FIRSTIME1/2=2, the first time R had intercourse, then midpoint=0
- FIRSTIME1/2=3, less than 1 month after first intercourse, then midpoint=1
- FIRSTIME1/2=4, 1-3 months after first intercourse, then midpoint=2
- FIRSTIME1/2=5, 4-12 months after first intercourse, then midpoint=8
- FIRSTIME1/2=6, more than 12 months after first intercourse, then midpoint= 8

The following also uses the estimation procedure, this time to compensate for missing data:

If R reported “DK/RF” to either the month or the year in EB-3 WNFSTUSE\_M/WNFSTUSE\_Y, but did report an interval after (or at) first intercourse (EB\_2 FIRSTIM1/FIRSTIME2=2 through 6), and there is a valid date for cmfstsex (cmfstsex NE “DK/RF”) then: DATEUSE1= cmfstsex plus the midpoint of the interval (estimated as above):

$$\text{DATEUSE1} = 90000 + \text{cmfstsex} + \text{midpoint}$$

*Note: The first column of this century-month variable is “9” if the month is estimated from EB-2 FIRSTIME1/2, and “0” otherwise. This estimation procedure gives priority to the report of relative timing of 1st method use and 1st sex (FIRSTIME1/2) over the report of date of 1st method use.*

*Imputation note: Imputation needed if cmfstsex=DK/RF and DATEUSE1 has not been assigned by the above criteria.*

## **Section G: Desire and Expectation for Future Births**

### **INTENT\*\*:** “Intentions for additional births”

*Note: For currently pregnant women INTENT refers to intentions after the current pregnancy. In Cycle 5 (1995) NSFG, joint intentions were only asked of currently married women but starting in the 2002 NSFG, both currently married and cohabiting women were asked.*

*(Blaise-computed variables **rstrstat** and **pstrstat** are defined in Flow Check D-33 and indicate surgical or nonsurgical sterility at time of interview.*

INTENT=1 (“intends to have (more) children”) if:

- R is currently married or cohabiting (AD-7b MARSTAT=1 or 2), neither she nor her husband/partner is sterile (rstrstat=0 and pstrstat=0), and she and her husband/partner intend to have a(nother) baby (GB-1 JINTEND = 1); or
- R is unmarried and not cohabiting (AD-7b MARSTAT NE 1 or 2), she is not sterile (rstrstat=0), and she intends to have a(nother) baby (GC-1 INTEND = 1).

INTENT=2 (“does not intend to have (more) children”) if:

- R or her current husband/partner is sterile (rstrstat NE 0 or pstrstat NE 0); or
- R is currently married or cohabiting (AD-7b MARSTAT=1 or 2), neither is sterile (rstrstat=0 and pstrstat=0), and they do not intend to have a(nother) baby (GB-1 JINTEND = 5); or
- R is unmarried and not cohabiting (AD-7b MARSTAT NE 1 or 2), she is not sterile (rstrstat=0), and (she does not intend to have a(nother) baby (GC-1 INTEND = 5) or GC-1 INTEND = . And GA-1 RWANT=5 or 8).

INTENT=3 (“does not know her intent”) if:

- R is currently married or cohabiting (AD-7b MARSTAT=1 or 2) and GB-1 JINTEND = DK); or
- R is unmarried and not cohabiting (AD-7b MARSTAT NE 1 or 2) and GC-1 INTEND = DK).

*Imputation Note: INTENT is imputed only if (GB-1 JINTEND = RF or “not ascertained”) or (GC-1 INTEND = RF or “not ascertained”).*

| 2 | = | R does not intend to have (more) children |
| 3 | = | R does not know her intent                |

**ADDEXP\*\*:**                   **“Central number of additional births expected”**

*Note: In Cycle 5 (1995) NSFG, joint intentions were only asked of currently married women but starting in the 2002 NSFG, both currently married and cohabiting women were asked.*

*(Blaise-computed variables **rstrstat** and **pstrstat** are defined in Flow Check D-33 and indicate surgical or nonsurgical sterility at time of interview.)*

If R or her current husband or cohabiting partner is sterile (rstrstat NE 0 or pstrstat NE 0), then ADDEXP=000.

Else if R is currently married or cohabiting (AD-7b MARSTAT=1 or 2) and neither is sterile (rstrstat=0 and pstrstat=0), then do:

If R and her husband/partner do not intend to have a(nother) baby (GB-1 JINTEND = 5), then ADDEXP=0;

Else if GB-1 JINTEND = DK, RF, “not ascertained” and her largest expected is zero (GB-1 JEXPECTL = 0), then ADDEXP=0;

Else if R and her husband/partner intend to have a(nother) baby (GB-1 JINTEND = 1), and she gives an intended number (0 LE GB-3 JINTENDN LT 96), then ADDEXP=10\*JINTENDN;

Else if R and her husband/partner intend to have a(nother) baby (GB-1 JINTEND = 1), and she does not give an intended number (GB-3 JINTENDN=DK,RF) but gives largest and smallest (0 LE GB-5 JEXPECTS LT 96 AND 0 LT GB-4 JEXPECTL LT 96 ), then ADDEXP= 10\*((JEXPECTS +JEXPECTL)/2);

Else if GB-1 JINTEND = DK, RF, or “not ascertained” but she did give a largest and smallest number expected (0 LE GB-4 JEXPECTL LT 96 and 0 LE GB-5 JEXPECTS LT 96), then ADDEXP=10\* ((JEXPECTL + JEXPECTS)/2);

Else if GB-1 JINTEND = DK, RF, or “not ascertained” and she gave a largest number expected but smallest number is unknown (0 LE GB-4 JEXPECTL LT 96 and GB-5 JEXPECTS = DK, RF, or “not ascertained”), then ADDEXP=10\* ((JEXPECTL )/2);

Else if R is not currently married or cohabiting [(AD-7b MARSTAT NE 1 or 2)] and she is not sterile (rstrstat=0), then do:

If R does not intend to have a(nother) baby (GC-1 INTEND = 5 ), then ADDEXP=0;

Else if R intends to have a(nother) baby (GC-1 INTEND = 1), and she gives an intended number (0 LE C-3 INTENDN LT 96), then ADDEXP=10\*INTENDN;

Else if R intends to have a(nother) baby (GC-1 INTEND = 1), but she did not give an intended number (C-3 INTENDN=DK, RF) but she did give a largest and smallest number

expected (0 LE GC-4 EXPECTL LT 96 and 0 LE GC-5 EXPECTS LT 96), then  
 $ADDEXP = 10 * ((EXPECTL + EXPECTS)/2)$ .

Else if GC-1 INTEND= . (not ascertained) and RWANT NE 1 then ADDEXP=0;

Else if GC-1 INTEND = DK, RF, or “not ascertained” and her largest expected is zero  
(GC-4 EXPECTL = 0), then ADDEXP=0;

Else if GC-1 INTEND = DK, RF, or “not ascertained” but she did give a largest and  
smallest number expected (0 LE GC-4 EXPECTL LT 96 and 0 LE GC-5 EXPECTS LT  
96), then  $ADDEXP = 10 * ((EXPECTL + EXPECTS)/2)$ .

Else if GC-1 INTEND = DK, RF, or “not ascertained” and she gave a largest number  
expected but smallest number is unknown (0 LE GC-4 EXPECTL LT 96 and GC-5  
EXPECTS = DK), then  $ADDEXP = 10 * ((EXPECTL) / 2)$ .

Else if GC-1 INTEND = DK, RF, or “not ascertained” and she gave smallest number  
expected but largest number is unknown (0 LE GC-4 EXPECTS LT 96 and GC-5  
EXPECTL = DK), then  $ADDEXP = 10 * ((EXPECTS) / 2)$ .

After all of the above statements have been executed, an additional pregnancy is added to  
ADDEXP for all currently pregnant Rs:

If R is currently pregnant (CURRPREG=1), then  $ADDEXP = ADDEXP + 10$

Code categories:

000=No additional births expected  
005=.5 additional births  
010=1 additional birth  
015=1.5 additional births  
020=2 additional births  
...etc. through...  
100=10 additional births

## **Section H: Infertility Services & Reproductive Health**

### **ANYPRGHP\*\*:** “Any medical help to become pregnant”

ANYPRGHP is inapplicable if R has never had sexual intercourse with a male (Blaise-computed variable **rhadsex** = 5) and she is younger than 18 years (Blaise-computed variable **age\_r** < 18).

For all Rs who have ever had sexual intercourse with a male or who are 18 or older:

If R reported medical help to become pregnant (HA-1 HLPPRG = 1), then ANYPRGHP = 1 (yes).

Else if HA-1 HLPPRG=5 (no), then ANYPRGHP = 2 (no).

*Imputation Note:* Needed if HA-1 HLPPRG = DK or RF.

Code categories:

Blank	= Inapplicable
1	= Yes
2	= No

### **ANYMSCHP\*\*:** “Any medical help to prevent miscarriage”

ANYMSCHP is inapplicable if R has never had sexual intercourse with a male (Blaise-computed variable **rhadsex** = 5) and she is younger than 18 years (Blaise-computed variable **age\_r** < 18).

For all Rs who have ever had sexual intercourse with a male or who are 18 or older:

If R reported medical help to prevent miscarriage (HB-1 HLPMC = 1), then ANYMSCHP = 1 (yes).

Else if HB-1 HLPMC = 5 (no), then ANYMSCHP = 2 (no).

*Imputation Note:* Needed if HB-1 HLPMC = DK or RF.

Code categories:

Blank	= Inapplicable
1	= Yes
2	= No

### **INFEVER\*\*:** “Ever used infertility services”

INFEVER is inapplicable if R has never had sexual intercourse with a male (Blaise-computed variable **rhadsex** = 5) and she is younger than 18 years (Blaise-computed variable **age\_r** < 18).

For all Rs who have ever had sexual intercourse with a male or who are 18 or older:

If R reported seeking medical help either to get pregnant or to prevent miscarriage (ANYPRGHP=Yes or ANYMSCHP=Yes), INFEVER = 1 (yes).

Else if R reported neither form of help (ANYPRGHP=No and ANYMSCHP=No), INFEVER = 2 (no).

*Imputation Note:*      *Logically imputed based on imputed values of ANYPRGHP and ANYMSCHP.*

Code categories:

Blank = Inapplicable  
1      = Yes  
2      = No

**OVULATE\*\*:**            **“Infertility services: Drugs to improve ovulation”**

OVULATE is inapplicable if:

--      R has never had sexual intercourse with a male (Blaise-computed variable **rhadsex** = 5)  
         and she is younger than 18 years (Blaise-computed variable **age\_r** < 18)

OR

--      R did not report seeking any medical help to become pregnant (HA-1 HLPPRG = 5 (no))

For all Rs who reported any medical help to become pregnant (HA-1 HLPPRG = 1):

OVULATE is coded based on specific services reported in HA-5 TYPALLPGx. TYPALLPGx provides space for up to 6 “mentions” of services.

If code 3 is given in TYPALLPGx, then OVULATE=1.  
Otherwise OVULATE=2.

*Imputation Note:*      *Model-based imputation needed contingent on imputed value of ANYPRGHP. If ANYPRGHP is imputed to NO, then this recode is imputed to “inapplicable”; if ANYPRGHP is imputed to YES, then this recode can be imputed to yes or no.*

Code categories:

Blank = Inapplicable  
1      = Reported  
2      = Not reported

**TUBES\*\*:**                   **“Infertility services: Surgery to correct blocked tubes”**

TUBES is inapplicable if:

- R has never had sexual intercourse with a male (Blaise-computed variable **rhadsex** = 5) and she is younger than 18 years (Blaise-computed variable **age\_r** < 18) OR
- R did not report seeking any medical help to become pregnant (HA-1 HLPPRG = 5 (no))

For all Rs who reported any medical help to become pregnant (HA-1 HLPPRG = 1):

TUBES is coded based on specific services reported in HA-5 TYPALLPGx. TYPALLPGx provides space for up to 6 “mentions” of services.

If code 4 is given in TYPALLPGx, then TUBES=1.  
Otherwise TUBES=2.

*Imputation Note:       Model-based imputation needed contingent on imputed value of ANYPRGHP. If ANYPRGHP is imputed to NO, then this recode is imputed to “inapplicable”; if ANYPRGHP is imputed to YES, then this recode can be imputed to yes or no.*

Code categories:

- Blank = Inapplicable
- 1       = Reported
- 2       = Not reported

**INFERTR\*\*:**                   **“Infertility services: Infertility testing on respondent”**

INFERTR is inapplicable if:

- R has never had sexual intercourse with a male (Blaise-computed variable **rhadsex** = 5) and she is younger than 18 years (Blaise-computed variable **age\_r** < 18)
- OR
- R did not report seeking any medical help to become pregnant (HA-1 HLPPRG = 5 (no))

For all Rs who reported any medical help to become pregnant (HA-1 HLPPRG = 1):

INFERTR is coded based on specific services reported in HA-5 TYPALLPGx and HA-5a WHOTEST. TYPALLPGx provides space for up to 6 “mentions” of services. WHOTEST indicates who received infertility testing.

If code 2 is given in TYPALLPGx and WHOTEST EQ 1 or 5, then INFERTR=1.  
Otherwise INFERTR=2.

*Imputation Note:       Model-based imputation needed contingent on imputed value of ANYPRGHP. If ANYPRGHP is imputed to NO, then this recode is imputed to “inapplicable”; if ANYPRGHP is imputed to YES, then this recode can be imputed to yes or no.*

Code categories:

Blank = Inapplicable  
1 = Reported  
2 = Not reported

**INFERTH\*\*:**            **“Infertility services: Infertility testing on husband/partner”**

INFERTH is inapplicable if:

-- R has never had sexual intercourse with a male (Blaise-computed variable **rhadsex** = 5)  
and she is younger than 18 years (Blaise-computed variable **age\_r** < 18)

OR

-- R did not report seeking any medical help to become pregnant (HA-1 HLPPRG = 5 (no))

For all Rs who reported any medical help to become pregnant (HA-1 HLPPRG = 1):

INFERTH is coded based on specific services reported in HA-5 TYPALLPGx and HA-5a WHOTEST. TYPALLPGx provides space for up to 6 “mentions” of services. WHOTEST indicates who received infertility testing.

If code 2 is given in TYPALLPGx and WHOTEST EQ 3 or 5, then INFERTH=1.  
Otherwise INFERTH=2.

*Imputation Note:        Model-based imputation needed contingent on imputed value of ANYPRGHP. If ANYPRGHP is imputed to NO, then this recode is imputed to “inapplicable”; if ANYPRGHP is imputed to YES, then this recode can be imputed to yes or no.*

Code categories:

Blank = Inapplicable  
1 = Reported  
2 = Not reported

**ADVICE\*\*:**            **“Infertility services: Advice”**

ADVICE is inapplicable if:

-- R has never had sexual intercourse with a male (Blaise-computed variable **rhadsex** = 5)  
and she is younger than 18 years (Blaise-computed variable **age\_r** < 18)

OR

-- R did not report seeking any medical help to become pregnant (HA-1 HLPPRG = 5 (no))

For all Rs who reported any medical help to become pregnant (HA-1 HLPPRG = 1):

ADVICE is coded based on specific services reported in HA-5 TYPALLPGx. TYPALLPGx provides space for up to 6 “mentions” of services.

If code 1 is given in TYPALLPGx, then ADVICE=1.  
Otherwise ADVICE=2.

*Imputation Note:* Model-based imputation needed contingent on imputed value of ANYPRGHP. If ANYPRGHP is imputed to NO, then this recode is imputed to “inapplicable”; if ANYPRGHP is imputed to YES, then this recode can be imputed to yes or no.

Code categories:

Blank = Inapplicable  
1 = Reported  
2 = Not reported

**INSEM\*\*:** “Infertility services: Artificial insemination”

INSEM is inapplicable if:

-- R has never had sexual intercourse with a male (Blaise-computed variable **rhadsex** = 5)  
and she is younger than 18 years (Blaise-computed variable **age\_r** < 18)

OR

-- R did not report seeking any medical help to become pregnant (HA-1 HLPPRG = 5 (no))

For all Rs who reported any medical help to become pregnant (HA-1 HLPPRG = 1):

INSEM is coded based on specific services reported in HA-5 TYPALLPGx. TYPALLPGx provides space for up to 6 “mentions” of services.

If code 5 is given in TYPALLPGx, then INSEM=1.  
Otherwise INSEM=2.

*Imputation Note:* Model-based imputation needed contingent on imputed value of ANYPRGHP. If ANYPRGHP is imputed to NO, then this recode is imputed to “inapplicable”; if ANYPRGHP is imputed to YES, then this recode can be imputed to yes or no.

Code categories:

Blank = Inapplicable  
1 = Reported  
2 = Not reported

**INVITRO\*\*:** “Infertility services: In vitro fertilization or other assisted reproduction”

INVITRO is inapplicable if:

-- R has never had sexual intercourse with a male (Blaise-computed variable **rhadsex** = 5)  
and she is younger than 18 years (Blaise-computed variable **age\_r** < 18)

OR

-- R did not report seeking any medical help to become pregnant (HA-1 HLPPRG = 5 (no))

For all Rs who reported any medical help to become pregnant (HA-1 HLPPRG = 1):

INVITRO is coded based on specific services reported in HA-5 TYPALLPGx and HA-5c OTMEDHEPx. TYPALLPGx provides space for up to 6 “mentions” of services. OTMEDHEPx provides space for up to 5 “mentions” of other services.

If code 6 is given in TYPALLPGx and code 2 is given in OTMEDHEPx, then  
INVITRO=1.

Otherwise INVITRO=2.

*Imputation Note: Model-based imputation needed contingent on imputed value of ANYPRGHP. If ANYPRGHP is imputed to NO, then this recode is imputed to “inapplicable”; if ANYPRGHP is imputed to YES, then this recode can be imputed to yes or no.*

Code categories:

Blank = Inapplicable  
1 = Reported  
2 = Not reported

**ENDOMET\*\*:** “Infertility services: Surgery or drug treatment for endometriosis”

ENDOMET is inapplicable if:

-- R has never had sexual intercourse with a male (Blaise-computed variable **rhadsex** = 5)  
and she is younger than 18 years (Blaise-computed variable **age\_r** < 18)

OR

-- R did not report seeking any medical help to become pregnant (HA-1 HLPPRG = 5 (no))

For all Rs who reported any medical help to become pregnant (HA-1 HLPPRG = 1):

ENDOMET is coded based on specific services reported in HA-5 TYPALLPGx and HA-5c OTMEDHEPx. TYPALLPGx provides space for up to 6 “mentions” of services. OTMEDHEPx provides space for up to 5 “mentions” of other services.

If code 6 is given in TYPALLPGx and code 1 is given in OTMEDHEPx, then  
ENDOMET=1.

Otherwise ENDOMET=2.

*Imputation Note: Model-based imputation needed contingent on imputed value of ANYPRGHP. If ANYPRGHP is imputed to NO, then this recode is imputed to “inapplicable”; if ANYPRGHP is imputed to YES, then this recode can be imputed to yes or no.*

Code categories:

Blank = Inapplicable  
1 = Reported  
2 = Not reported

**FIBROIDS\*\*:**            **“Infertility services: Surgery for uterine fibroids”**

FIBROIDS is inapplicable if:

-- R has never had sexual intercourse with a male (Blaise-computed variable **rhadsex** = 5) and she is younger than 18 years (Blaise-computed variable **age\_r** < 18)

OR

-- R did not report seeking any medical help to become pregnant (HA-1 HLPPRG = 5 (no))

For all Rs who reported any medical help to become pregnant (HA-1 HLPPRG = 1):

FIBROIDS is coded based on specific services reported in HA-5 TYPALLPGx and HA-5c OTMEDHEPx. TYPALLPGx provides space for up to 6 “mentions” of services. OTMEDHEPx provides space for up to 5 “mentions” of other services.

If code 6 is given in TYPALLPGx and code 3 is given in OTMEDHEPx, then

FIBROIDS=1.

Otherwise FIBROIDS=2.

*Imputation Note:*        *Model-based imputation needed contingent on imputed value of ANYPRGHP. If ANYPRGHP is imputed to NO, then this recode is imputed to “inapplicable”; if ANYPRGHP is imputed to YES, then this recode can be imputed to yes or no.*

Code categories:

Blank = Inapplicable

1       = Reported

2       = Not reported

**PIDTREAT\*\*:**           **“Ever been treated for PID”**

If PID treatment question is non-missing (HD-1 PID = 1 or 5), then PIDTREAT is based on PID as follows:

If PID=1 then PIDTREAT=1;

Else if PID=5 then PIDTREAT=2;

*Imputation Note:*        *Cases imputed at least partly (if available) on response to HD-2 PIDSYMPT.*

Code categories:

1       = Yes

2       = No

**EVHIVTST\*\*:**           **“Ever had an HIV test”**

EVHIVTST = 0 if:

R has never donated blood, nor does she report ever having an HIV test.

(HE-1 DONBLOOD = 5(no) and HE-2 HIVTEST = 5(no))

else EVHIVTST = 1 if:

R has only had her blood tested for HIV in the context of a blood donation.

(HE-1 DONBLOOD = 1(yes) and HE-2 HIVTEST = 5(no))

else EVHIVTST = 2 if:

R has never donated blood but she reports an HIV test elsewhere.

(HE-1 DONBLOOD =5(no) and HE-2 HIVTEST =1(yes))

else EVHIVTST = 3 if:

R reported both blood donation and HIV testing outside of blood donation.

(HE-1 DONBLOOD =1(yes) and HE-2 HIVTEST =1(yes))

*User Note: Some women may have answered no to HE-2 HIVTEST, but reported HIV testing during their most recent completed pregnancy (HE-9 PREGHIV). Users may wish to include such women as having had HIV testing outside of blood donation.*

*Imputation Note: Imputed if HE-1 DONBLOOD = DK or RF or if HE-2 HIVTEST = DK or RF.*

Code categories:

0 = No HIV test reported

1 = Yes, only as part of blood donation 2

= Yes, only outside of blood donation 3

= Yes, in both contexts

### **FPTITHIV\*\*:** “Source of HIV test received in the last 12 months”

FPTITHIV=blank (inapplicable) if R did not report receiving an HIV test in the last 12 months.

(HE-2 HIVTEST=5, DK, RF or CMHIVTST LT CMLSTYR or CMHIVTST =DK,RF ).

(sets to system-missing if test was more than 12 months ago or DK/RF)

Otherwise,

If R received an HIV test in the last 12 months (HE-2 HIVTEST=1 and CMHIVTST GE CMLSTYR ) and it was possibly received at a clinic (HE-4 PLCHIV = 3,4,6,7, 14) (i.e., the clinic database was invoked), then do:

If R received it at a Title X clinic sponsored by a public health department (ClinicFund\_H\_1= 1 AND ClinicType\_H\_1 = 2), then FPTITHIV=1.

Else if R received it at a Title X clinic and the agency type is unknown (ClinicFund\_H\_1= 1 AND ClinicType\_H\_1=-6), then FPTITHIV=5.

Else if R received it at a non-Title X clinic and the agency type is unknown (ClinicFund\_H\_1= 0 AND ClinicType\_H\_1=-6), then FPTITHIV=6.

Else if R received it at a Title X clinic NOT sponsored by a public health department (ClinicFund\_H\_1= 1 AND ClinicType\_H\_1 NE 2), then FPTITHIV=2.

Else if R received it at a non-Title X clinic sponsored by a public health department (ClinicFund\_H\_1= 0 AND ClinicType\_H\_1= 2), then FPTITHIV=3.

Else if R received it at a non-Title X clinic NOT sponsored by a public health department (ClinicFund\_H\_1= 0 AND ClinicType\_H\_1 NE 2), then FPTITHIV=4.

*(The condition that follows is intended to capture cases who reported codes HE-4 PLCHIV = 1, 2, 5, 8, 9, 10, 11, 12, 13, 15, or 20.)*

Else if R received an HIV test in the last 12 months (HE-2 HIVTEST=1 and CMHIVTST GE CMLSTYR ) and FPTITHIV still = . and R gave information on place (HE-4 PLCHIV NE . ), then do:

If R received it at an employer or company clinic or at work site (HE-4 PLCHIV = 5 or 11), then FPTITHIV=7.

If R received it at private doctor's office or HMO (HE-4 PLCHIV = 1 or 2), then FPTITHIV=8.

Else if R received it at a hospital emergency room, hospital regular room, or urgi-care center (HE-4 PLCHIV =8,9,10), then FPTITHIV=9.

Else if R received HIV test at home (HE-4 PLCHIV=12) then FPTITHIV=10.

Else if R received HIV test at military site (HE-4 PLCHIV=13) then FPTITHIV=11.

Else if R received HIV test at lab or blood bank (HE-4 PLCHIV=15) then FPTITHIV=12.

Else if R received it at "some other place" (HE-4 PLCHIV = 20), then FPTITHIV=13.

Code categories:

Blank	=	Inapplicable
01	=	Clinic: Title X=yes; health department=yes
02	=	Clinic: Title X=yes; health department =no
03	=	Clinic: Title X=no; health department=yes
04	=	Clinic: Title X=no; health department=no
05	=	Clinic: Title X=yes; agency type unknown
06	=	Clinic: Title X=no; agency type unknown
07	=	Employer or company clinic
08	=	Private doctor's office or HMO
09	=	Hospital emergency room/regular room/urgent care
10	=	Some other place

## **Section I: Health Insurance; Residence; Religion; Work Status**

**CURR\_INS\*\*:**      **“Current health insurance coverage status”**

User Note:      *While there are alternate ways in which health insurance categories can be combined, the CURR\_INS recode applies the same prioritization and groupings as the National Health Interview Survey. The respondent’s current health insurance is obtained in the “enter all that apply” question IA-2 COVERHOW. Because this question includes 10 response categories, the respondent can report up to 10 types of insurance. However, in the 2017-2019 NSFG data, no respondents reported more than 3 types reported (COVERHOW01, COVERHOW02, COVERHOW03).*

If R was currently covered by insurance (IA-1 CURRCOV=1), then:

CURR_INS = 1	If any mention of either a private health insurance or Medi-Gap in any of the COVERHOW variables (IA-2 COVERHOWnn = 1 or 4)
Else	
CURR_INS = 2	If any mention of Medicaid, CHIP, or state-sponsored health plans in any of the COVERHOW variables (IA-2 COVERHOWnn = 2, 7 or 9)
Else	
CURR_INS = 3	If any mention of Medicare, Military health care, or other government health care in any of the COVERHOW variables (IA-2 COVERHOWnn = 3, 5, or 10)
Else	
CURR_INS = 4	If R reported only a single service plan or only Indian Health Service in any of the COVERHOW variables (IA-2 COVERHOWnn = 6 or 8)

Else, if R was not currently covered by insurance (IA-1 CURRCOV = 5), then:

CURR\_INS = 4      Not currently covered by insurance

*Imputation Note:*      *Imputed if CURRCOV or COVERHOWnn is DK/RF.*

*Note:*      *The original 10 categories for the raw variables COVERHOWnn were collapsed for public use into 9 categories. The full-detail variables of INCOVERHOWnn are available through the NCHS Research Data Center.*

Code categories:

- 1 = currently covered by private health insurance or Medi-Gap
- 2 = currently covered by Medicaid, CHIP, or a state-sponsored health plan
- 3 = currently covered by Medicare, Military health care, or other government health care
- 4 = currently covered only by a single-service plan, only by the Indian Health Service, or currently not covered by health insurance

**METRO\*\*:** “Place of residence (metropolitan-nonmetropolitan)”

METRO = R’s address at time of interview classified according to 2010 Census population counts. The U.S. Office of Management and Budget defines metropolitan statistical areas (MSAs).

Code categories:

- 1 = Principal city of MSA
- 2 = Other MSA
- 3 = Not MSA

**RELIGION\*\*:** “Current religious affiliation”

RELIGION reflects the respondent’s current religious affiliation, based on information obtained in RELNOW and RELNOW1.

-- If IC-5 RELNOW = None (1), then RELIGION = 1.

-- If IC-5 RELNOW = Catholic (2), then RELIGION = 2.

-- If R reported any Protestant denomination

IC-5 RELNOW = Southern Baptist (4), Baptist (5), Methodist or African Methodist (6), Lutheran (7), Presbyterian (8), Episcopal or Anglican (9)

or

IC-6 RELNOW1 = Assemblies of God (12), Church of Nazarene (13), The Church of God (14), The Church of God (Cleveland, TN) (15), The Church of God in Christ (16), 7<sup>th</sup> Day Adventist (17), United Pentecostal Church (18), Pentecostal Assemblies (19), Christian, another denomination not listed (21), or Christian, no specific denomination (22)

then RELIGION = 3.

-- If R reported some other religion

IC-5 RELNOW = Jewish (3) or Church of Jesus Christ of Latter Day Saints, (LDS/Mormon) (10),

or

IC-6 RELNOW1 = Jehovah’s Witness (20), Unitarian-Universalist (23), Greek Orthodox (24), Other Orthodox (25), Muslim (26), Buddhist (27), Hindu (28), or Other (29),

then RELIGION = 4.

*Imputation Note:* Imputation was done for cases with DK/RF responses on RELNOW or RELNOW1.

*User Note:* This recode is comparable to prior file releases, but there has been a modification of the specification for the category RELIGION = 4 due to the deletion of “other-specify” verbatim responses in 2017.

Code categories:

- 1 = No religion
- 2 = Catholic
- 3 = Protestant
- 4 = Other religion

**LABORFOR\*\*:**        **“Labor force status”**

LABORFOR is a composite variable that categorizes the respondent’s activities in the week before the interview in hierarchical order based on her activity status (IE-1 DOLASTWK<sub>n</sub>) and whether she was working full or part-time (IE-4 RFTPTX).

Assign code to LABORFOR from IE-1 DOLASTWK1 through IE-1 DOLASTWK9, taking the code highest in the ranking shown below.

LABORFOR = 1        If (IE-1 DOLASTWK1 - DOLASTWK9 = 1) and IE-4 RFTPTX = 1  
(R was working full-time last week)

Else

LABORFOR = 2        If (IE-1 DOLASTWK1 - DOLASTWK9 = 1) and IE-4 RFTPTX = 2 or 3  
(R was working part-time last week)  
*Note: “some of each” is coded as “part time”*

Else

LABORFOR = 3        If IE-1 DOLASTWK1 - DOLASTWK9 = 2  
(R was not working due to temporary illness, vacation, strike, etc.)

Else

LABORFOR = 4        If IE-1 DOLASTWK1 - DOLASTWK9 = 3  
(R was on paternity leave or family leave from job)

Else

LABORFOR = 5        If IE-1 DOLASTWK1 - DOLASTWK9 = 4  
(R was unemployed, laid off, or looking for work)

Else

LABORFOR = 6        If IE-1 DOLASTWK1 - DOLASTWK9 = 7  
(R was going to school)

Else

LABORFOR = 7        If IE-1 DOLASTWK1 - DOLASTWK9 = 5  
(R was keeping house)

Else

LABORFOR = 8        If IE-1 DOLASTWK1 - DOLASTWK9 = 8  
(R was on permanent disability)

Else

LABORFOR = 9        If IE-1 DOLASTWK1 - DOLASTWK9 = 6  
(R was taking care of family) then

Else

LABORFOR = 10       If IE-1 DOLASTWK1 - DOLASTWK9=9  
(R responded “something else”)

Else if IE-1 DOLASTWK1 in (98 99) then LABORFOR is imputed.

*User Note: The original LABORFOR recode, as defined above, was collapsed for public use from 10 categories to 9. The full-detail variable called INLABORFOR is available through the NCHS Research Data Center.*

*User Note: The original 9 categories for the raw variables DOLASTWKnn were collapsed for public use into 6 categories). Therefore, the public- use versions of LABORFOR and DOLASTWK cannot be aligned as given in the specifications above. The full-detail variables of INDOLASTWKnn are available through the NCHS Research Data Center.*

Code categories and ranking for LABORFOR (public-use variable):

- 1 = Working full-time
- 2 = Working part-time
- 3 = Working, but on vacation, strike, or had temporary illness
- 4 = Working, but on maternity or family leave
- 5 = Not working but looking for work
- 6 = In school
- 7 = Keeping house
- 8 = Caring for family
- 9 = Other

Code categories and ranking for INLABORFOR (restricted-use variable):

- 1 = Working full-time
- 2 = Working part-time
- 3 = Working, but on vacation, strike, or had temporary illness
- 4 = Working, but on maternity or family leave
- 5 = Not working but looking for work
- 6 = In school
- 7 = Keeping house
- 8 = On permanent disability
- 9 = Caring for family
- 10 = Other

## Section J: Audio CASI

### **POVERTY##:      “Poverty level income”**

Poverty level income is R’s combined family income from all sources in the calendar year before the interview (JI-3 TOTINC) divided by the weighted average threshold income of families whose head of household was under 65 years of age, for a family of the size of R’s family, based on the annual poverty levels defined by the U.S. Census Bureau (family size is calculated by adding 1 to the integer value of NUMFMHH, from Section A Recodes). If the value is 998 or greater, then POVERTY=998.

-- For this recode an exact family income is estimated by the midpoint of the reported range of annual family income (JI-3 TOTINC) as follows:

- 1 = \$2,500
- 2 = \$6,250
- 3 = \$8,750
- 4 = \$11,250
- 5 = \$13,750
- 6 = \$17,500
- 7 = \$22,500
- 8 = \$27,500
- 9 = \$32,500
- 10 = \$37,500
- 11 = \$45,000
- 12 = \$55,000
- 13 = \$67,500
- 14 = \$87,500
- 15 = \$125,000

### **The annual poverty thresholds for each family size are:**

Family Size	2016 <sup>1</sup> (for 2017 interviews)	2017 <sup>2</sup> (for 2018 interviews)	2018 <sup>3</sup> (for 2019 interviews)
1	\$12,486	\$12,752	\$13,064
2	\$16,151	\$16,493	\$16,889
3	\$19,105	\$19,515	\$19,985
4	\$24,563	\$25,094	\$25,701
5	\$29,111	\$29,714	\$30,459
6	\$32,928	\$33,618	\$34,533
7	\$37,458	\$38,173	\$39,194
8	\$41,781	\$42,684	\$43,602
9 or larger	\$49,721	\$50,681	\$51,393

<sup>3</sup> U.S. Census Bureau | Social, Economic, and Housing Statistics Division: Poverty. Poverty Thresholds for 2018 by Size of Family and Number of Related Children Under 18 Years.  
url: <https://www2.census.gov/programs-surveys/cps/tables/time-series/historical-poverty-thresholds/thresh18.xls>

*Note: The original POVERTY recode, as defined above, was modified for public use, with bottom-coding at 50 to represent “50 percent of poverty level or less” and top-coding at 700 to represent “700 percent of poverty level or greater.” The full-detail variable called INPOVERTY is available through the NCHS Research Data Center.*

*Imputation note: If missing, the “DK follow-up” questions (JI-3a FMINCDK1, JI-3b FMINCDK2, JI-3c FMINCDK3, JI-3d FMINCDK4, and JI-3e FMINCDK5) are used as imputation bounds.*

Code categories:

50 = 50 percent of poverty level or less  
51-699 = 51-699 percent of poverty level  
700 = 700 percent of poverty level or greater

**TOTINCR\*\*:** “Total income of R’s family”

TOTINCR = R’s income (if no family members in household) or combined income of R’s family from all sources in the calendar year before the interview (JI-3 TOTINC).

This variable is an imputed version of JI-3 TOTINC and is created for the purposes of creating/imputing POVERTY.

Code categories:

1 = under \$5,000/year  
2 = \$5,000-\$7,499  
3 = \$7,500-\$9,999  
4 = \$10,000-\$12,499  
5 = \$12,500-\$14,999  
6 = \$15,000-\$19,999  
7 = \$20,000-\$24,999  
8 = \$25,000-\$29,999  
9 = \$30,000-\$34,999  
10 = \$35,000-\$39,999  
11 = \$40,000-\$49,999  
12 = \$50,000-\$59,999  
13 = \$60,000-\$74,999  
14 = \$75,000-\$99,999  
15 = \$100,000 or more/year

*Imputation note:* If missing, the “DK follow-up” questions (JI-3a FMINCDK1, JI-3b FMINCDK2, JI-3c FMINCDK3, JI-3d FMINCDK4, and JI-3e FMINCDK5) are used as imputation bounds.

**PUBASSIS\*\*:** “Whether R or any members of her family received public assistance in the calendar year before the interview”

PUBASSIS = 1 if:

R received public assistance/welfare, food stamps, WIC, help with transportation, childcare, or job training in the calendar year before the interview (JI-4 PUBASST = 1 or JI-6 FOODSTMP = 1 or JI-7 WIC = 1 or JI-8a HLPTRANS = 1 or JI-8b HLPCHLDC = 1 or JI-8c HLPJOB = 1).

PUBASSIS = 2 if:

R did not receive public assistance/welfare, food stamps, WIC, help with transportation, childcare or job training in the calendar year before the interview (JI-4 PUBASST = 5 and JI-6 FOODSTMP = 5 and JI-7 WIC = 5 and JI-8a HLPTRANS = 5 and JI-8b HLPCHLDC = 5 and JI-8c HLPJOB = 5).

*Imputation note:* PUBASSIS is imputed if one or more variables are 8 or 9 (DK/RF) and the remainder are 5 (no, did not receive this type of public assistance).

Code categories:

1 = Yes (R received public assistance in previous calendar year)

2 = No (R did not receive public assistance in previous calendar year)
