<sup>1</sup> For 1917-19 and 1941-46 based on population including Armed Forces abroad.

<sup>2</sup> Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix.

<sup>3</sup> Based on a 50-percent sample of births.

<sup>4</sup> Based on a 20- to 50-percent sample of births.

<sup>5</sup> Figures by race exclude data for residents of New Jersey; see Technical Appendix.

<sup>6</sup> Due to rounding to the nearest thousand, figures by race may not add to totals. For 1915-32, figures include adjustments for States not in the registration area; for years prior to 1915, figures are estimates based on the number of registered births in the 10 original registration States for the same period. Estimates for 1909-34 were prepared by P. K. Whelpton. See National Office of Vital Statistics, "Births and Birth Rates in the Entire United States, 1909 to 1948," Vital Statistics—Special Reports, Vol. 33, No. 8, 1950.

<sup>7</sup> For method of adjustment see Technical Appendix.

[Rates per 1,000 population for specified group. Computed by the direct method, using as the standard population the age distribution of females aged 10-49 years enumerated in 1940; see Technical Appendix. Based on birth rates by age of mother and race shown in table 1-6. Beginning 1970 excludes births to nonresidents of the United States; see Technical Appendix]

Table 1-4. Gross and Net Reproduction Rates by Race of Child: United States, 1940-88

[Gross reproduction rates are the sums of birth rates by 5-year age groups of mothers multiplied by 5 and by the proportion of births that were female. These rates represent the average number of daughters that a hypothetical cohort of women born on the same date would bear if they all survived from birth to the end of their childbearing period and if they experienced a given set of age-specific fertility rates. Net reproduction rates are the sums of birth rates by 5-year age groups of mothers multiplied by 5 and by the probability (as determined from the life table for the year) of women surviving to a specified age group and by the proportion of births that were female. These rates represent the average number of daughters that a hypothetical cohort of 1,000 women would bear if they experienced given sets of age-specific mortality and fertility rates. Beginning 1970 excludes births to nonresidents of the United States; see Technical Appendix.]

**Table 1-5. Intrinsic Rates of Birth, Death, and Natural Increase by Race of Child: United States, 1940, 1950, and 1960-88**

[Rates per 1,000 population for specified group. The intrinsic rates of birth, death, and natural increase are the rates that would eventually prevail if a population were to experience the age-specific mortality and fertility rates for a given year over a long period of time. For method of computation see page 4-13, Volume I, "Vital Statistics of the United States, 1962." Beginning 1970 excludes births to nonresidents of the United States; see Technical Appendix]

Table 1-6. Total Fertility Rates and Birth Rates, by Age of Mother and Race of Child: United States, Specified Years 1940-55 and Each Year 1960-88—Con.

[Total fertility rates are the sums of birth rates by 5-year age groups of mothers multiplied by 5. Birth rates are live births per 1,000 women in specified group. Beginning 1970 excludes births to nonresidents of the United States; see Technical Appendix]

Table 1-12. Birth Probabilities by Parity, Exact Age of Woman, and Race of Child: United States, Specified Years 1940-75 and Each Year 1980-88

[Based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. Parity refers to the number of children born alive to a woman. Probabilities are the number of births per 1,000 women in specified parity and exact age group. Figures in the "0 parity" column show the probability of first births to "0 parity" women, those in the "1 parity" column show the probability of second births to "1 parity" women, etc.]

Table 1-12. Birth Probabilities by Parity, Exact Age of Woman, and Race of Child: United States, Specified Years 1940-75 and Each Year 1980-88—Con.

[Based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. Parity refers to the number of children born alive to a woman. Probabilities are the number of births per 1,000 women in specified parity and exact age group. Figures in the "0 parity" column show the probability of first births to "0 parity" women, those in the "1 parity" column show the probability of second births to "1 parity" women, etc.]

Table 1-12. Birth Probabilities by Parity, Exact Age of Woman, and Race of Child: United States, Specified Years 1940-75 and Each Year 1980-88—Con.

[Based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. Parity refers to the number of children born alive to a woman. Probabilities are the number of births per 1,000 women in specified parity and exact age group. Figures in the "0 parity" column show the probability of first births to "0 parity" women, those in the "1 parity" column show the probability of second births to "1 parity" women, etc.]

[Live-birth order refers to number of children born alive to mother. Rates for 1988 are averages of the rates per 1,000 women for single cohorts shown in table 1-18; these rates are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses]

Table 1-14. Central Birth Rates by Live-Birth Order, Current Age of Mother, and Race of Child, for Women in Selected Groups of Cohorts From 1896-1900 to 1969-73: United States, 1940-88—Con.

[Live-birth order refers to number of children born alive to mother. Rates for 1988 are averages of the rates per 1,000 women for single cohorts shown in table 1-18; these rates are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses]

Table 1-23. Birth Rates and Fertility Rates by Month, Adjusted for Seasonal Variation: United States, 1979-1988

[Monthly birth and fertility rates adjusted for seasonal variation are those that would have been observed if the characteristic seasonal pattern of births were eliminated. Rates on an annual basis per 1,000 estimated population for specified month. Birth rates based on total population; fertility rates based on women aged 15-44 years. For method of seasonal adjustment see Technical Appendix]

<sup>1</sup> Rates computed by relating total births to unmarried women, regardless of age of mother, to unmarried women aged 15-44 years.

<sup>2</sup> Rates computed by relating births to unmarried women aged 40 years and over to unmarried women aged 40-44 years. Rates by race for years prior to 1969 are computed by relating births to unmarried women aged 35 years and over to unmarried women aged 35-44 years.

<sup>3</sup> Data for States in which marital status was not reported have been inferred from other items on the birth certificate and included with data from the reporting States; see Technical Appendix.

<sup>4</sup> Based on 100 percent of births in selected states and on a 50-percent sample of births in all other States; see Technical Appendix.

<sup>5</sup> Births to unmarried women are estimated for the United States from data for registration areas in which marital status of mother was reported; see Technical Appendix.

<sup>6</sup> Based on a 50-percent sample of births.

<sup>7</sup> Based on a 20- to 50-percent sample of births.

<sup>1</sup> Rates are computed by relating total births to married women, regardless of age of mother, to married women aged 15-44 years.

<sup>2</sup> Rates are computed by relating births to married women aged 40 years and over to married women 40-44 years. Rates by race for years prior to 1969 are computed by relating births to married women aged 35 years and over to married women aged 35-44 years.

<sup>3</sup> Data for States in which marital status was not reported have been inferred from other items on the birth certificate and included with data from the reporting States; see Technical Appendix.

<sup>4</sup> Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix.

<sup>5</sup> Births to married women are estimated for the United States from data for registration areas in which marital status of mother was reported; see Technical Appendix.

<sup>6</sup> Based on a 50-percent sample of births.

<sup>7</sup> Based on a 20- to 50-percent sample of births.
