OVERVIEW

This document describes the 2020 National Hospital Care Survey (NHCS) Stimulant Algorithm research file that was created by the Stimulant Algorithm. Algorithm development was funded by the Assistant Secretary for Planning and Evaluation (ASPE) Office of the Secretary – Patient Centered Outcomes Research Trust Fund (OS-PCORTF). The research file provides created context on stimulant-involved inpatient and emergency department (ED) NHCS hospital encounters and the data are available in the Federal and National Center for Health Statistics Research Data Centers (RDC).

This document provides:

- description of the algorithm methodology and case definitions.
- information about the records available in the dataset.
- resources for additional information

STIMULANT ALGORITHM

Data Source

The Stimulant Algorithm was developed using National Hospital Care Survey (NHCS) data. The NHCS collects inpatient and emergency department (ED) administrative claims or electronic health record (EHR) data from participating hospitals. This dataset includes information captured during a hospital visit such as diagnoses, services provided at the hospital, and discharge status. NHCS provides nationally representative data on hospital utilization and patient care in hospital departments. For general information about the NHCS, see:

https://www.cdc.gov/nchs/nhcs/?CDC_AAref_Val=https://www.cdc.gov/nchs/nhcs/index.htm.

The full algorithm identifies clinical visits (encounters) involving therapeutic stimulant use, misuse of prescription stimulants and opioids and use of illicit stimulants and opioids. The developed algorithm had two components: a code component that identifies cases using coded data from hospital records, and a Natural Language Processing (NLP) component that includes a machine learning (ML) model that processes unstructured clinical notes.

The research file was created using the output variables for the code and NLP components. The code component uses medical codes to flag all the variables in the research file while the NLP component searches the free-text clinical notes flagging a subset of the variables in the research file. Encounters were flagged for non-therapeutic stimulant and opioid co-use if they were positive for non-therapeutic use of stimulant(s) and non-therapeutic use of opioids, at any point in their clinical history. Information on the NHCS data are available in the NCHS's Research Data Center (RDC), see:

<https://www.cdc.gov/rdc/data/b1/NHCS-RDC-Data-Dictionary.pdf>.

Information About the Stimulant Algorithm Variables

The encounter-level file of the NHCS Stimulant Dataset identifies stimulant encounters in the ED and inpatient settings. The file was created using the Stimulant Algorithm that searched the 2020 NHCS data for stimulant-involved encounters using medical codes and natural language processing techniques to analyze clinical notes.

The code component of the algorithm for stimulant-involved and non-therapeutic opioid diagnosis, medication, procedure, service, and laboratory codes. The NLP component identified stimulant-involved encounters mentioned in the clinical notes. Detailed information on the methodology for the development of the Stimulant Algorithm is described elsewhere.

Stimulant Use Definitions

The Stimulant Algorithm identifies patients with stimulant-involved encounters. A stimulant-involved encounter was defined as a patient's visit to the hospital that involved the use of illicit stimulants or misuse of prescription stimulants. Prescription misuse and or illicit use are considered non-therapeutic use of stimulants. Therapeutic use refers to taking a stimulant or opioid as prescribed or directed. Prescription misuse is defined as use of prescription drugs in any manner not directed by a doctor, including the use of diverted prescriptions; or use in greater amounts, more often, or longer than prescribed. Schedule I drugs, substances, or chemicals are defined as drugs with no currently accepted medical use and a high potential for abuse while Schedule II drugs, substances, or chemicals are defined as drugs with a high potential for abuse, with use potentially leading to severe psychological or physical dependence (1). For this project, Illicit use refers to the use of a stimulant or opioid classified as Schedule I (3,4-methylenedioxymethamphetamine (MDMA, ecstasy), heroin) or illegally manufactured (methamphetamine, fentanyl). (1) Note that cocaine, fentanyl, and methamphetamine are Schedule II drugs due to their medical use. (1) For this project, these drugs were classified as illicit use, unless otherwise specified in the clinical record. Unspecified use of drugs is classified as the use of stimulants or opioids that are not specified as therapeutic or non-therapeutic in the clinical record.

The Stimulant Algorithm consists of two components to identify patients with stimulant and opioid-involved hospital encounters: a code component and NLP component. The next section describes how those algorithm components identified records in the NHCS data.

Opioid Use Definitions

The Stimulant Algorithm also identifies patient visits to the hospital that involved 1) therapeutic use, which is the use of an opioid as prescribed by a clinician, and 2) non-therapeutic use, which entails the use of illicit opioids such as heroin or misuse of prescription opioids (misuse is defined in the above section). For the algorithm, opioid use was defined as the presence of medical codes associated with therapeutic or non-therapeutic use of opioids, and or mentions of opioid terms associated with non-therapeutic use in the clinical notes. Patient records with opioid terms or with medical codes unrelated to opioid use, as defined above, were not flagged for any of the opioid use measures.

Code Component

The NHCS collects coded diagnoses, medication, laboratory test results, and services information. The code component of the algorithm searched these codes to identify encounters that met the project's definition of stimulant and opioid-involved hospital encounters. In the 2020 NHCS data, most diagnostic information were initially coded in one of two code systems: the International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM), or the Systematized Nomenclature of Medicine-Clinical Terms (SNOMED-CT). Diagnostic data submitted in the latter were translated into ICD-10-CM codes where possible. Medication information was submitted in multiple code systems and standardized into RxNorm nomenclature. Most data on laboratory tests were submitted as customized codes (based on hospital, EHR, insurer), or as Logical Observation Identifiers Names and Codes (LOINC) codes. Procedure and service codes were submitted in the International Classification of Disease, Tenth Revision, Procedure Coding System (ICD-10-PCS), the Healthcare Common Procedure Coding System (HCPCS), or Current Procedural Terminology (CPT) code system. Refer to Appendix I-IV for the full list of relevant codes used by the Stimulant Algorithm.

Machine Learning and Natural Language Processing Component

The machine learning and NLP component of the Stimulant Algorithm identifies stimulant-involved and opioid encounters mentioned in the clinical notes available in the 2020 NHCS data. Only EHR data sources with clinical notes are included in the NLP analysis.

The NLP component is designed to extract information from the clinical notes associated with an encounter. The EHR data collected by NHCS is the only data source with clinical notes. Therefore, the NLP component could only be applied to a subset of the encounters in the full NHCS dataset.

Keyword search terms were key terms or supportive evidence found in the clinical notes to be used for the text base analysis as potential candidates for identifying cases. Refer to Appendix V-VIII for the full list of search terms used to identify stimulant and illicit opioid cases.

In the 2020 NHCS data, there were 2,512,902 EHR encounters. Of the EHR collected in the 2020 NHCS, 901,940 had one or more analyzable note records. The NLP algorithm was only used on 9.0% of the total 10,010,479 encounters collected in NHCS.

Stimulant Algorithm Variables

The Stimulant Algorithm identified encounter records where patients had any stimulant or non-therapeutic opioid use. Stimulant use could be identified as therapeutic or non-therapeutic. It should be noted that patients can have records that identified therapeutic and non-therapeutic stimulant use. The algorithm identified patient encounter records with non-therapeutic opioid use but does not identify therapeutic opioid use. If there was a mention of opioid use, but that opioid use could not be identified as non-therapeutic, that mention did not result in any flags in the research file.

The number of encounters that were identified as any stimulant or opioid use in the 2020 NHCS emergency department and inpatient by the Stimulant Algorithm are shown in Table 1.

Table 1. Number and percent of 2020 National Hospital Care Survey encounters identified for any and non-therapeutic stimulant and opioid use, by setting.

A patient encounter record could be identified for stimulant or opioid use by either the Stimulant Algorithm's code or NLP component. However, for certain drug use categories the NLP component could not reliably identify a positive case. For those drug use categories, only the code component was available to identify a positive case. Tables 2 and 3 reports the number of emergency and inpatient department encounters identified by Stimulant Algorithm component for patients with a mention of any stimulant use, non-therapeutic illicit use, non-therapeutic prescription misuse, or therapeutic use.

To identify stimulant and opioid co-use, the Stimulant Algorithm also identified encounters with patients with non-therapeutic opioid use. Tables 4 and 5 report the number of ED and inpatient encounters with patients identified by the NLP or code algorithm components as using any opioid, non-therapeutic opioid use, illicit opioid use, opioid misuse, and any unspecified non-therapeutic opioid use.

Data Dictionary

The following sections outline the variables in the Stimulant Research File, their description, the format they appear in, the value they represent, and any notes for further clarification. The variables in the file indicate if the patient encounter was identified (or flagged) as positive for stimulant use, opioid use, or both by the NLP component or by the code component. When determined by the code component, the variable is appended with “_CODE” and “_NLP” when identified by the code component. All variables were identified by the code component (“_CODE”). However, the NLP component identified only a subset of the variables (those appended with “_NLP”). To identify all patient encounters, the user must use the variables with “_CODE” and “_NLP” extensions. For example, an encounter that has a value of “1” in either STIM_ILLECT_NLP or STIM_ILLECT_CODE is an encounter that was found to have illicit stimulant use in the research file by one of the components. If an encounter has a value of “1” for both variables (that is, “VAR_NLP” and VAR_CODE”), then the encounter was found to have illicit stimulant use by both components.

In the data dictionary below, two groups of variables do not have the suffix “_NLP” or “_CODE”. Linkage variables allow linkage of the stimulant research file to the complete National Hospital Care Survey data set, and ‘Global variables’ comprise four variables. 1) DRUGSCREEN, 2) OPIOID_ANY_NON_TX, 3) STIM_ANY_NON_TX, and 4) STIM_OPIOID_CO_USE.

- Although both components flagged DRUGSCREEN, the algorithm did not delineate this difference.
- OPIOID_ANY_NON_TX and STIM_ANY_NON_TX are derived from a logical combination of their “_NLP” and “_CODE” counterparts. For example, if OPIOID_ANY_NON_TX=1, then the following is true:
 $\Rightarrow$ OPIOID_ANY_NON_TX_NLP=1 and OPIOID_ANY_NOT_TX_CODE=1.
- The variable STIM_OPIOID_CO_USE is derived from the variables OPIOID_ANY_NON_TX and STIM_ANY_NON_TX. When both variables are true (or =1), STIM_OPIOID_CO_USE is also assigned a value of ‘1’ or true for the measure of co-use.

Note that some NLP variables were excluded from the file due to their unreliable performance in testing. For example, the measure of ‘unspecified non-therapeutic opioid use’ was identified only by the code component (code only); the measure ‘any non-therapeutic opioid use’ was identified by both components (counts are available for code only, NLP only, both). By identification method, the reported counts for these two measures cannot be directly compared because they were identified differently.

NOTES: The NHCS Enhanced Opioid Identification Algorithm was applied to the 2020 National Hospital Care Survey along with the Stimulant Algorithm to identify opioid use. The variable OPIOID_MISUSE_NLP was dropped due to insufficient examples found for NLP modeling, but it was used to derive related variable(s).

T43655D	Adverse effect of methamphetamines, subsequent encounter

ICD-10-CM Code	Description
T43635A	Adverse effect of methylphenidate, initial encounter
T43635S	Adverse effect of methylphenidate, sequela
T43635D	Adverse effect of methylphenidate, subsequent encounter
T43695	Adverse effect of other psychostimulants
T43695A	Adverse effect of other psychostimulants, initial encounter
T43695S	Adverse effect of other psychostimulants, sequela
T43695D	Adverse effect of other psychostimulants, subsequent encounter
T43605	Adverse effect of unspecified psychostimulants
T43605A	Adverse effect of unspecified psychostimulants, initial encounter
T43605S	Adverse effect of unspecified psychostimulants, sequela
T43605D	Adverse effect of unspecified psychostimulants, subsequent encounter
T43626	Underdosing effect of amphetamines
T43626A	Underdosing effect of amphetamines, initial encounter
T43626S	Underdosing effect of amphetamines, sequela
T43626D	Underdosing effect of amphetamines, subsequent encounter
T405X6	Underdosing of cocaine
T405X6A	Underdosing of cocaine, initial encounter
T405X6S	Underdosing of cocaine, sequela
T405X6D	Underdosing of cocaine, subsequent encounter
T43656	Underdosing of methamphetamines
T43656A	Underdosing of methamphetamines, initial encounter
T43656S	Underdosing of methamphetamines, sequela
T43656D	Underdosing of methamphetamines, subsequent encounter
T43636	Underdosing of methylphenidate
T43636A	Underdosing of methylphenidate, initial encounter
T43636S	Underdosing of methylphenidate, sequela
T43636D	Underdosing of methylphenidate, subsequent encounter
T43696	Underdosing of other psychostimulants
T43696A	Underdosing of other psychostimulants, initial encounter
T43696S	Underdosing of other psychostimulants, sequela
T43696D	Underdosing of other psychostimulants, subsequent encounter
T43606	Underdosing of unspecified psychostimulants
T43606A	Underdosing of unspecified psychostimulants, initial encounter
T43606S	Underdosing of unspecified psychostimulants, sequela
T43606D	Underdosing of unspecified psychostimulants, subsequent encounter
P0416	Newborn affected by maternal use of amphetamines
P0441	Newborn affected by maternal use of cocaine
R782	Finding of cocaine drug in blood

Appendix V: Stimulant-Involved Procedure Codes

HCPCS CODE	Description
C9046	Cocaine hydrochloride nasal solution (goprelto), 1 mg
C9143	Cocaine hydrochloride nasal solution (numbrino), 1mg
S0160	Dextroamphetamine sulfate, 5 mg
G1028	Take-home supply of nasal naloxone; 2-pack of 8mg per 0.1 ml nasal spray (provision of the services by a Medicare-enrolled opioid treatment program); list separately in addition to code for primary procedure
G2067	Medication assisted treatment, methadone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing, if performed (provision of the services by a Medicare-enrolled opioid treatment program)
G2068	Medication assisted treatment, buprenorphine (oral); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled opioid treatment program)
G2069	Medication assisted treatment, buprenorphine (injectable); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled opioid treatment program)
G2070	Medication assisted treatment, buprenorphine (implant insertion); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled opioid treatment program)
G2071	Medication assisted treatment, buprenorphine (implant removal); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled opioid treatment program)
G2072	Medication assisted treatment, buprenorphine (implant insertion and removal); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled opioid treatment program)
G2073	Medication assisted treatment, naltrexone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled opioid treatment program)
G2074	Medication assisted treatment, weekly bundle not including the drug, including substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled opioid treatment program)
G2075	Medication assisted treatment, medication not otherwise specified; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing, if performed (provision of the services by a Medicare-enrolled opioid treatment program)
G2077	Periodic assessment; assessing periodically by qualified personnel to determine the most appropriate combination of services and treatment (provision of the services by a Medicare-enrolled opioid treatment program); list separately in addition to code for primary procedure

HCPCS CODE	Description
G2078	Take-home supply of methadone; up to 7 additional day supply (provision of the services by a Medicare-enrolled opioid treatment program); list separately in addition to code for primary procedure
G2079	Take-home supply of buprenorphine (oral); up to 7 additional day supply (provision of the services by a Medicare-enrolled opioid treatment program); list separately in addition to code for primary procedure
G2080	Each additional 30 minutes of counseling in a week of medication assisted treatment, (provision of the services by a Medicare-enrolled opioid treatment program); list separately in addition to code for primary procedure
G2086	Office-based treatment for opioid use disorder, including development of the treatment plan, care coordination, individual therapy and group therapy and counseling; at least 70 minutes in the first calendar month
G2087	Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; at least 60 minutes in a subsequent calendar month
G2088	Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; each additional 30 minutes beyond the first 120 minutes (list separately in addition to code for primary procedure)
G2172	All inclusive payment for services related to highly coordinated and integrated opioid use disorder (oud) treatment services furnished for the demonstration project
G2213	Initiation of medication for the treatment of opioid use disorder in the emergency department setting, including assessment, referral to ongoing care, and arranging access to supportive services (list separately in addition to code for primary procedure)
G2215	Take-home supply of nasal naloxone; 2-pack of 4mg per 0.1 ml nasal spray (provision of the services by a Medicare-enrolled opioid treatment program); list separately in addition to code for primary procedure
G2216	Take-home supply of injectable naloxone (provision of the services by a Medicare-enrolled opioid treatment program); list separately in addition to code for primary procedure
G9561	Patients prescribed opiates for longer than six weeks
G9562	Patients who had a follow-up evaluation conducted at least every three months during opioid therapy
G9563	Patients who did not have a follow-up evaluation conducted at least every three months during opioid therapy
G9577	Patients prescribed opiates for longer than six weeks
G9578	Documentation of signed opioid treatment agreement at least once during opioid therapy
G9579	No documentation of signed an opioid treatment agreement at least once during opioid therapy
G9583	Patients prescribed opiates for longer than six weeks
G9584	Patient evaluated for risk of misuse of opiates by using a brief validated instrument (e.g., opioid risk tool, soapp-r) or patient interviewed at least once during opioid therapy
G9585	Patient not evaluated for risk of misuse of opiates by using a brief validated instrument (e.g., opioid risk tool, soapp-r) or patient not interviewed at least once during opioid therapy
H0020	Alcohol and/or drug services; methadone administration and/or service (provision of the drug by a licensed program)
HG	Opioid addiction treatment program
J0364	Injection, apomorphine hydrochloride, 1 mg
J0570	Buprenorphine implant 74.2mg
J0571	Buprenorphine, oral, 1 mg

HCPCS CODE	Description
J0572	Buprenorphine/naloxone, oral, less than or equal to 3 mg buprenorphine
J0573	Buprenorphine/naloxone, oral, greater than 3 mg, but less than or equal to 6 mg buprenorphine
J0574	Buprenorphine/naloxone, oral, greater than 6 mg, but less than or equal to 10 mg buprenorphine
J0575	Buprenorphine/naloxone, oral, greater than 10 mg buprenorphine
J0592	Injection, buprenorphine hydrochloride, 0.1 mg
J0595	Injection, butorphanol tartrate, 1 mg
J0745	Injection, codeine phosphate, per 30 mg
J1170	Injection, hydromorphone, up to 4 mg
J1230	Injection, methadone hcl, up to 10 mg
J1810	Injection, droperidol and fentanyl citrate, up to 2 ml ampule
J1960	Injection, levorphanol tartrate, up to 2 mg
J2175	Injection, meperidine hydrochloride, per 100 mg
J2180	Injection, meperidine and promethazine hcl, up to 50 mg
J2270	Injection, morphine sulfate, up to 10 mg
J2271	Injection, morphine sulfate, 100mg
J2274	Injection, morphine sulfate, preservative-free for epidural or intrathecal use, 10 mg
J2275	Injection, morphine sulfate (preservative-free sterile solution), per 10 mg
J2300	Injection, nalbuphine hydrochloride, per 10 mg
J2410	Injection, oxymorphone hcl, up to 1 mg
J2440	Injection, papaverine hcl, up to 60 mg
J3010	Injection, fentanyl citrate, 0.1 mg
J3070	Injection, pentazocine, 30 mg
Q9991	Injection, buprenorphine extended-release (sublocade), less than or equal to 100 mg
Q9992	Injection, buprenorphine extended-release (sublocade), greater than 100 mg
S0012	Butorphanol tartrate, nasal spray, 25 mg
S0092	Injection, hydromorphone hydrochloride, 250 mg (loading dose for infusion pump)
S0093	Injection, morphine sulfate, 500 mg (loading dose for infusion pump)
S0109	Methadone, oral, 5 mg
G2076	Intake activities, including initial medical examination that is a complete, fully documented physical evaluation and initial assessment by a program physician or a primary care physician, or an authorized healthcare professional under the supervision of a program physician qualified personnel that includes preparation of a treatment plan that includes the patient's short-term goals and the tasks the patient must perform to complete the short-term goals; the patient's requirements for education, vocational rehabilitation, and employment; and the medical, psycho- social, economic, legal, or other supportive services that a patient needs, conducted by qualified personnel (provision of the services by a Medicare-enrolled opioid treatment program); list separately in addition to code for primary procedure
